General Information:
Protect lighting, heating and other circuits not subject to temporary surges and where available short-circuit currents are relatively low.
ONE-TIME fuses do not have any appreciable degree of time delay and thus should not be specified in circuits where large transients or motor overloads occur.
Use BUSS FUSE TRON or LOW-PEAK R dual-element, time-delay fuses.
For general purpose circuits, size at ampere rating of circuit.
For motor circuits, size at 300% to 400%.
