**Product Description**

The 6442 steady state DC ionizer is designed to control static charge wherever static buildup can cause ESD damage, particle contamination, or material handling problems. Featuring self balancing IsoStat® technology requiring no calibration. The small footprint occupies less workspace than traditional blowers and a 2 speed fan allows for varying operating conditions. A patented auto clean system cleans the emitter points each time the unit powers down. This substantially reduces maintenance, insures consistent performance, and extends emitter life.
