> A solution for any application

A complete offer

- An offer with maximum flexibility, comprising:
 - complete products: a single reference for a relay mounted on a socket,
 - products for customer assembly: select the relay and associated socket according to your application.
- Wide choice of sockets available covering a range of voltages from 12 to 230 V.

An offer that meets the most demanding standards

- Conformity with the European RoHS (Restriction of Hazardous Substances) directive.
- Conformity to international standards IEC/EN 61810-1, UL508, CSA C22.2 N°14, GOST.

100% RoHS

Schneider Electric commits itself
to reducing the environmental
impact of its products

> Reliability in any situation

Protection integrated in the socket

The assurance of reliable protection of the relay irrespective of the supply voltage used.

LED indicator

Power on and relay status LED indicator.

«Standard» and «low level» version relays

For high breaking capacity or low level current application requirements.

Up to 6A
breaking capacity

> Simplicity of installation and cabling

Simple maintaining of relay in socket and its release/removal
Using locking/unlocking lever.

Simplification of cabling
Commoning link available as accessory.

Simple mounting on DIN rail

Choice of 2 connection techniques
Suitable for the majority of your applications.

Screw connector

Spring terminal

Presentation of the range

RSL slim interface relays offer the advantages of compact size and modular design. Their slim width (6 mm/0.236 in.) saves space when mounting on a DIN rail at the back of an enclosure.

RSL relays are available in two versions:

- **Pre-assembled range:** a single reference comprising a standard relay mounted on its socket.
 - The socket includes a protection circuit (against reverse polarity and surge) and an LED indicator as standard.
 - Two types of connector are available for wire connection: screw connectors or spring terminals.
 - This pre-assembled solution covers a wide range of operating voltages from 12 to 230 V.
- **Customer assembly range:**
 - The relay (standard or low level) and the socket are selected, as required, according to the operating voltage of the application.
 - For maintenance, an RSL slim relay can be replaced without disconnecting the socket wiring.

Relay description

RSL slim interface relays, pre-assembled

- 1 6 A standard relay with 1 C/O contact.
- 2 Lever for retaining or easy withdrawal of the relay from its socket.
- 3 Sockets: wire connection by screw connectors or spring terminals.
- 4 All sockets have a built-in protection circuit and LED indicator.

RSL slim interface relay

- 1 Five flat, reinforced pins (PCB type).

Socket description

Sockets for RSL slim interface relays

- 1 Five female contacts for the relay pins.
- 2 Retaining lever with marker label.
- 3 Wire connection by screw connectors or spring terminals.
- 4 Protection circuit and LED indicator are built into the socket.
- 5 Locating slot for mounting on DIN rail.

Zelio relay - Electromechanical relays

Plug-in relays

RSB interface relays

2

Presentation of the range

The RSB interface relay range comprises:

- 12 A relays with 1 C/O contact, 16 A relays with 1 C/O contact, and 8 A relays with 2 C/O contacts.
- Sockets with separate contact terminals.
- Protection modules (diode, diode + LED, RC circuit, or varistor + LED) common to all sockets.
- A plastic maintaining clamp for all sockets.
- Clip-in legends for the sockets.

Socket description

Sockets with separate contact terminals (1)

- Connection by connector.
- Five or eight female contacts for the relay pins.
- A fixing hole for panel mounting.
- Location for protection modules.
- Locking components for plastic maintaining clamp.
- Locating slot for mounting on DIN rail.

(1) The inputs and outputs are separated from the relay supply.

(1) To order a relay complete with socket (sold in lots of 20): add suffix **S** to one of the following voltage codes **JD**, **BD**, **B7**, **P7**, or **F7**.
Example: **RSB2A080BD + RSZE1S48M** becomes **RSB2A080BDS**.

(2) RSZE1S48M is a two terminal socket each carrying 10 A.

(3) If RSZE1S48M socket terminals are linked, the relay RSB1A160●● can be used up to 16 A. See "Wiring diagrams" on www.schneider-electric.com.

2

Sockets with mixed contact terminals

Sockets with separate contact terminals

Presentation of the range

The RXM miniature relay range comprises:

- 12 A relays with 2 C/O contacts, 10 A relays with 3 C/O contacts, 6 A relays with 4 C/O contacts, and 3 A "low level" relays with 4 C/O contacts. All these relays have the same dimensions.
- Sockets with mixed or separate contact terminals.
- Protection modules (diode, RC circuit, or varistor) common to all sockets.
- A metal maintaining clamp for all sockets.
- A plastic maintaining clamp for all sockets.
- A 2-pole bus jumper that can be used on sockets with separate contact terminals in order to simplify cabling when creating an equipotential link between the coil terminals.
- Clip-in legends for all sockets except **RXZE2M114** and **RXZE2S114S**.

Relay description

- Spring return pushbutton for testing the contacts (green: $\overline{\text{---}}$, red: $\sim$).
- Mechanical "relay status" indicator.
- Removable lock-down door enabling forced maintaining of the contacts for test sequences or maintenance purposes.
- LED (depending on version) indicating the relay status.
- Removable legend for relay identification.
- Four notches for rail mounting adapter or panel mounting adapter with fixing lugs.
- Eight, eleven, or fourteen Faston type pins.
- Area by which the product can be easily gripped.
- Mounting adapter enabling direct mounting of the relay on a panel.
- Mounting adapter enabling direct mounting of the relay on a DIN rail.

Socket description

Sockets with mixed contact terminals (1)

- Connection by screw clamp terminals or screw connector.
- Fourteen female contacts for the relay pins.
- Location for protection modules.
- Locking components for plastic and metal maintaining clamps.
- Locating slot for mounting on DIN rail with its compression spring or fixing clip.
- Two or four fixing holes for panel mounting.

Sockets with separate contact terminals (2)

- Connection by screw connector.
- Connection by push-in spring clamp terminals. No tool  is required to insert the cable.
- Eight, eleven or fourteen female contacts for the relay pins.
- Location for protection modules.
- Locking components for plastic and metal maintaining clamps.
- Locating slot for mounting on DIN rail with its compression spring or fixing clip.
- Two fixing holes for panel mounting.
- Location for bus jumpers (see "Mounting on Sockets" section on www.schneider-electric.com).
- Location for clip-in legend.

(1) The inputs are mixed with the relay's supply, with the outputs being located on the opposite side of the socket.

(2) The inputs and outputs are separated from the relay supply.

Presentation of the range

The RUM universal relay range comprises:

- 10 A relays with 2 and 3 C/O contacts, and cylindrical or flat (Faston type) pins. All these relays have the same dimensions.
- Sockets with mixed or separate contact terminals.
- Protection modules (diode, RC circuit, or varistor) or 1 timer module, common to all sockets.
- A metal maintaining clamp for all sockets.
- A 2-pole bus jumper that can be used on sockets with separate contact terminals in order to simplify cabling when creating an equipotential link between the coil terminals.
- Clip-in legends for the sockets.

Relay description

- Spring return pushbutton for testing the contacts (green: $\overline{\text{---}}$, red: $\sim$).
- Mechanical "relay status" indicator.
- Removable lock-down door enabling forced maintaining of the contacts for test sequences or maintenance purposes.
- LED (depending on version) indicating the relay status.
- Removable legend for relay identification.
- Area by which the product can be easily gripped.
- Eight or eleven cylindrical pins.
- Eight or eleven flat (Faston type) pins.

Socket description

Sockets with mixed contact terminals (1)

- Connection by screw connector.
- Eight or eleven female contacts for the relay cylindrical pins.
- Location for protection modules or the timer module.
- Locking component for metal maintaining clamp.
- A locating slot for mounting on DIN rail.
- Two fixing holes for panel mounting.

Sockets with separate contact terminals (2)

- Connection by screw connector.
- a Eight or eleven female contacts for the relay cylindrical pins.
b Eleven female contacts for the relay flat pins.
- Location for protection modules or the timer module.
- Locking component for metal maintaining clamp.
- Locating slot for mounting on DIN rail with fixing clip.
- Two fixing holes for panel mounting.
- Location for bus jumpers.

(1) The inputs are mixed with the relay's supply, with the outputs being located on the opposite side of the socket.

(2) The inputs and outputs are separated from the relay supply.

Zelio relay - Electromechanical relays

Plug-in relays

RPM power relays

Presentation of the range

The RPM power relay range comprises:

- 1 15 A relay with 1, 2, 3, and 4 C/O contacts.
- 2 Sockets with mixed contact terminals.
- 3 Protection modules (diode, RC circuit, or varistor) or 1 timer module. These protection modules are common to all sockets except for the timer module, which can be used only on 3-pole or 4-pole sockets.
- 4 A metal maintaining clamp for single-contact relays.

Relay description

- 1 Spring return pushbutton for testing the contacts (green: $\overline{\text{---}}$, red: $\sim$).
- 2 Mechanical "relay status" indicator.
- 3 Removable lock-down door enabling forced maintaining of the contacts for test sequences or maintenance purposes.
- 4 LED (depending on version) indicating the relay status.
- 5 Removable legend for relay identification.
- 6 Four notches for rail mounting adapter or panel mounting adapter with fixing lugs.
- 7 Five, eight, eleven, or fourteen Faston type pins.
- 8 Area by which the product can be easily gripped.
- 9 Mounting adapter enabling direct mounting of the relay on a panel.
- 10 Mounting adapter enabling direct mounting of the relay on a DIN rail.

Socket description

Sockets with mixed contact terminals (1)

- 1 Connection by screw clamp terminals.
- 2 Five, eight, eleven, or fourteen female contacts for the relay pins.
- 3 Location for protection modules or the timer module.
- 4 Locating slot for mounting on rail with fixing clip.
- 5 Two or four fixing holes for panel mounting.

(1) The inputs are mixed with the relay's supply, with the outputs being located on the opposite side of the socket.

Presentation of the range

RPF power relays with 2 C/O or 2 N/O contacts comprise:

- 1 Four or six Faston type pins.
- 2 Two relay supply pins.
- 3 A locating slot for mounting on DIN rail.
- 4 Two fixing holes for panel mounting.

Utilization categories		
Category	Type of current	Applications
AC-1	~ single-phase ~ 3-phase	Resistive or slightly inductive loads.
AC-3	~ 3-phase	Starting and braking of squirrel cage motors; reversing direction of rotation only after stopping of motor.
AC-4	~ 3-phase	Starting of squirrel cage motors, inching. Plugging, reversing direction of rotation.
DC-1	---	Resistive or slightly inductive loads (2).
AC-14	~ single-phase	Control of electromagnetic loads (< 72 VA), auxiliary control relays, power contactors, electromagnetic solenoid valves, and electromagnets.
AC-15	~ single-phase	Control of electromagnetic loads (> 72 VA), auxiliary control relays, power contactors, electromagnetic solenoid valves, and electromagnets.
DC-13	---	Control of electromagnetic loads, auxiliary control relays, power contactors, magnetic solenoid valves, and electromagnets.

Protection categories		
Category	Explanation	Condition
RT 0	Unenclosed relay	Relay not provided with a protective case.
RT I	Dust protected relay	Relay provided with a case which helps protecting its mechanism from dust.
RT II	Flux-proof relay	Relay capable of being automatically soldered without allowing the migration of solder fluxes beyond the intended areas.
RT III	Wash-tight relay	Relay capable of being automatically soldered and then washed to remove flux residues minimizing the possibility of ingress of flux or washing solvents.
RT IV	Sealed relay	Relay provided with a case which has no venting to the outside atmosphere.
RT V	Hermetically sealed relay	Sealed relay having an enhanced level of sealing.

(1) n = number of contacts.

(2) The switchable voltage can be doubled, for an equal current, by connecting two contacts in series.

Protection modules

Whenever an inductive load is de-energised (coil of a relay or of a contactor), an overvoltage appears at its terminals. This voltage peak can reach several thousand volts and a frequency of several MHz.

It is likely to disturb the operation of automation systems which contain electronic devices.

Protection modules are used to reduce the voltage peak on de-energisation and therefore limit the energy of interference signals to a level that will not disturb surrounding coils and electronic devices.

These modules are used to avoid:

- ☐ electromagnetic compatibility problems,
- ☐ the deterioration of contact materials,
- ☐ the destruction of insulation due to overvoltage,
- ☐ the destruction of electronic components.

Diode protection module (with or without LED)

■ Advantages

- ☐ accumulation of energy allowing current flow in the same direction,
- ☐ absence of any voltage peaks at the coil terminals,
- ☐ low cost.

■ Disadvantages

- ☐ increase in relay drop-out time (3 to 4 times the usual time),
- ☐ no polarity protection,
- ☐ de-energisation of the relay.

Protection module with varistor

■ Advantages

- ☐ can be used with $\sim$ and --- supply,
- ☐ voltage peak limited to about $2 U_n$,
- ☐ little effect on relay drop-out time.

■ Disadvantages

- ☐ no modification of coil's own oscillating frequency,
- ☐ limitation of switching frequency.

Protection module with RC circuit

■ Advantages

- ☐ coil oscillating frequency reduced to about 150 Hz,
- ☐ voltage peak limited to $3 U_n$,
- ☐ little effect on relay drop-out time.

■ Disadvantages

- ☐ no protection for low voltages.

Coil voltage with diode protection module (--- only)

Coil voltage with varistor protection module ($\sim$ and ---)

Coil voltage with RC circuit protection module ($\sim$ only)

[Http://www.100y.com.tw](http://www.100y.com.tw)

ABR-1 electromechanical interface modules are supplied in the form of compact modules, 17.5 mm/0.689 in. wide.

They are designed for interfacing discrete digital control signals exchanged within an automated system between the processing unit (PLC, numerical controller, etc) and the other components (contactors, solenoid valves, indicator lamps, proximity sensors, etc).

These products are based on contactor technology and are notable for their excellent adaptation to industrial environments, conforming to the recent IEC 947-5-1 standards.

Composition

The ABR-1 range comprises 2 families :

Input interfaces

Input interfaces switch input signals to the processor and are characterized by their high degree of contact reliability : less than 1 fault per 100 million operating cycles at $\sim 17\text{ V}, 5\text{ mA}$.

The interfaces can directly control most contactors and indicator lamps because of the high switching level characteristics.

Output interfaces

Output interfaces control the preactuators (contactors, solenoid valves, etc) for signalling devices (indicators lamps, audible alerts, etc). They are characterized by a high switching capacity with an average durability of up to 5 times greater than the traditional interface modules which include standard relays.

- 1 Override contacts by pressing button (not holding it down) for a simple and quick test during setting up or maintenance operations on the installation
- 2 Green indicator showing the mechanical position of the contacts
- 3 LED indicating the control signal state
- 4 Channel identification : 5 individual characters for AB1-R/G or one AB1-SA2 marker tag
- 5 Connection by screw clamp terminal enabling easy attachment of 2 wires per terminal. The layout of the connection terminals for both families (input and output) is designed for rational wiring and a clear separation between the incoming (processing) and outgoing (power and process control) circuits.

Examples of applications with PLCs

(1) Required for inductive loads (can be replaced with peak limiter).

(4) With polarization (+ on A1, - on A2).

Zelio interfaces

Electromechanical interface modules for discrete signals

Slim electromechanical interface modules

ABR-2 electromechanical interface modules complement the ABR-1 range.

They are characterised by micro relay technology which allows reduced dimensions and low switching levels (TTL, HCMOS, analog signals).

The ABR-2 family is in the form of slim compact modules, 9.5 mm/0.37 in. wide for input interface modules, 12 mm/0.47 in. wide for output interface modules, and 17.5 mm/0.69 in. wide for low level switching products.

Description

The ABR-2 comprises 3 families :

Input interfaces (9.5 mm/0.37 in. pitch)

Input interfaces switch input signals to a processor and are characterized by their high degree of contact reliability : less than 1 fault per 100 million operating cycles at ≤ 17 V, 5 mA.

An immunity to current leakages ≤ 2 mA, and a wide coil voltage range (0.7 to 1.25 U_n).

Output interfaces (12 mm/0.47 in. pitch)

Output interfaces control the preactuators (contactors, solenoid valves, etc) for signalling devices (indicators lamps, audible alerts, etc). They are characterized by a high switching capacity and an immunity to current leakages ≤ 2 mA. A lower cost version without LED signalling is available.

Low level switching input and output interfaces (17.5 mm/0.69 in. pitch) with 1 C/O contact

These interfaces are designed for switching logic (TTL or HCMOS) and analogue signals.

Warning : never switch inductive loads with this type of interface.

The front panel of the ABR-2 electromechanical interface module comprises :

- 1 LED indicating the control signal state
- 2 Channel identification : 5 individual characters for AB1-R/G or 1 AB1-SA2 marker tag
- 3 Connection by screw clamp terminal enabling easy attachment of 2 wires per terminal. The layout of the connection terminals for both families (input and output) is designed for rational wiring and a clear separation between the incoming (processing) and outgoing (power and process control) circuits.

Examples of applications with PLCs

ABR2E●●●●

ABR2S●●●●

ABR2SB12B

(1) Necessary for inductive loads (can be replaced with peak limiter).

Zelio interfaces

Solid state interface modules for discrete signals

Slim solid-state interface modules

The ABS2 solid-state interface relays are supplied in the form of compact modules which appear identical to the ABR2 electromechanical family. They are designed for interfacing discrete digital control signals exchanged within an automated system between the processor (PLC, numerical controller, etc) and the other components (contactors, solenoid valves, indicator lamps, proximity sensors, etc).

They are suitable for use in equipment which requires the benefits of electronic technology : a high operating rate, virtually unlimited durability, silent operation, etc. These products are notable for their high performance and excellent adaptation to industrial environments, conforming to the recent IEC standards.

Composition

The ABS-2 range comprises 2 families:

Input interfaces

The 9.5 mm/0.37 in. wide input interfaces are designed for switching input signals to processors. They offer a wide choice of electrical isolation between signals due to the wide range of input voltages from ~ 5 V to ~ 230 V.

Output interfaces

Output interfaces control the preactuators (contactors, solenoid valves, etc) for the signalling devices (indicator lamps, audible alerts, etc).

2 widths are available, 9.5 mm/0.37 in. and 17.5 mm/0.69 in., depending on the switched current.

The 17.5 mm/0.69 in. version comprises a 9.5 mm/0.37 in. interface and an integrated 8 mm/0.32 in. spacer. This device can, with its increased ventilation, switch high levels of currents.

The front panel of the ABS-2 slim solid-state interface module comprises:

- 1 LED indicating the state of the control signal.
- 2 Channel identification : 5 individual characters for AB1-/G or one AB1SA2 marker tag.
- 3 Connection by screw clamp terminal enabling easy attachment of 2 wires per terminal.
- 4 Integrated spacer.

The layout of the connection terminals for both families (input and output) is designed for rational wiring and a clear separation between the incoming (processing) and outgoing (power and process control) circuits.
