

## Ultra low capacitance single line ESD protection

0201 package

### Features

- $\pm 20V V_{RM}$
- Low  $V_{BR}/V_{CL}$  ratio
- Bidirectional protection
- Low leakage current  $< 1 \text{ nA typ.}$
- Ultra low PCB area:  $0.18 \text{ mm}^2$
- 0201 package
- ECOPACK2 compliant component
- Exceeds IEC 61000-4-2 level 4 standard:
  - $\pm 30 \text{ kV}$  (air discharge)
  - $\pm 20 \text{ kV}$  (contact discharge)

### Application

Where transient over voltage protection in ESD sensitive equipment is required, such as:

- Smartphones, mobile phones and accessories
- Tablets and notebooks
- Portable multimedia devices and accessories
- Digital cameras and camcorders
- Communication and highly integrated systems

### Description

The ESDALC20-1BF4 is a bidirectional single line TVS diode designed to protect the data line or other I/O ports against ESD transients.

The device is ideal for applications where both reduced line capacitance and board space saving are required.

## 2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of **ECOPACK** packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK is an ST trademark.

### 3 Recommendation on PCB assembly

#### 3.1 Footprint

Figure 12. Recommended footprint in mm

#### 3.2 Stencil opening design

Stencil opening thickness: 75  $\mu$ m / 3 mils

Figure 13. Stencil opening recommendations

### 3.3 Solder paste

1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste is recommended.
3. Offers a high tack force to resist component movement during high speed.
4. Use solder paste with fine particles: powder particle size 20-38  $\mu\text{m}$ .

### 3.4 Placement

1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
3. Standard tolerance of  $\pm 0.05$  mm is recommended.
4. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

### 3.5 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

### 3.6 Reflow profile

**Figure 14. ST ECOPACK recommended soldering reflow profile for PCB mounting**

**Note:** Minimize air convection currents in the reflow oven to avoid component movement. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
