Most Suitable IC for Controlling LED Effects within Applications

- Free-running PWM gradation control, with up to 1,024 levels, enables the representation of beautiful fade-in and fade-out effects.
- CPU load can be reduced by controlling lighting gradation and speed.
- Up to 49 pieces of this IC can be connected on the same serial bus communication line. Device group setting is also possible.
- 24 Line Outputs are contained in the 7 x 7 mm package.
- Use with Omron's W2RV005RM Constant Current IC to directly drive multiple LED's in series.
- RoHS Compliant

Ordering Information

Description	Model
LED Control IC	W2RF002RF

Specifications

Absolute Maximum Ratings (Ta = 25°C)

Item	Symbol	Rating
Supply Voltage	V_{DD}	-0.3 to 7.0 V
Input Voltage	V _{IN}	$-0.3 \text{ to V}_{DD} + 0.3 \le 7.0 \text{ V}$
Communication Output Voltage (SCL-O, SDA-O)	V _{SOUT}	$-0.3 \text{ to V}_{DD} + 0.3 \le 7.0 \text{ V}$
Driving Output Voltage	V _{DOUT}	-0.3 to 20 V
Driving Output Current/pin	Ob.	50 mA (when V _{DD} = 5.0 V)
(See note 1)	I _{DOUT}	30 mA (when V _{DD} = 3.3 V)
Power Dissipation	Pd	1.19 W (See note 2)
Operating Temperature	T _{OPR}	-20 to 85 °C
Storage Temperature	T _{STG}	-40 to 150 °C

- **Note: 1.** Take the power consumption and power dissipation rating into consideration.
 - 2. When implemented on a standard board (70 x 70 x 1.6 mm, Cu 3%, Single-sided glass epoxy board). The value reduces at a rate of about 9.52 mW/°C when the IC is used at Ta = 25°C or higher.

Recommended Operating Conditions

Item	Symbol	Rating
Supply Voltage	V _{DD}	3.0 to 5.5 V
Input Voltage	V _{IN}	0 to V _{DD} V
Communication Output Current (SCL-O, SDA-O)	I _{SOUT}	-10 to 10 mA
Communication Clock Frequency (SCL-I)	f _{SCL}	Max. 5 MHz (See note 1)

Note: 1. Take the timing characteristics into consideration.

Note: 1. The \overline{RST} terminal is connected to an internal 100 k Ω pull-up resistor. When this terminal is not used, connect a 0.1 μ F capacitor between the terminal and ground to prevent misoperation at power-on.

- 2. Connect the CAP terminal to a capacitor for smoothing power supply. Connect a 0.1 µF capacitor between the terminal and GND.
- 3. The VZ1 and VZ2 terminals are for driving output protection. Connect them to the power source of a driving system. When several driving system power supplies are used, connect the terminals to the highest potential among them. When these terminals are not used, leave them open.
- 4. Always leave the TST1 and TST2 terminals open.
- **5.** Leave unused output terminals open.

Operation

■ Functional Overview

Receiving Commands

The IC recieves commands with two-wire serial communication to control 24 LED lines. Commands are received in a 40-bits-per-command communication format.

Gradation Control

The lighting of the 24 LED lines is controlled individually or by group with 16-level lighting gradation and 32-level lighting speed. The exponential control of output duty cycle allows lighting gradation that matches the human visual characteristics. In addition, the specification of lighting speed allows fade-in and fade-out with up to 1,024 levels.

Number of Control Lines

The IC has two device address lines, each of which can be configured in seven ways by terminal configuration. This provides up to 49 patterns of device address configuration, allowing up to 1,176 lines to be controlled on the same communication line. Two device address lines can be combined to configure a device group.

■ Communication Specifications

Input signals to SDA-I and SCL-I are input via the filter circuit (0.1µs delay) to the communication circuit. An SDA-I signal that is input to the communication circuit is taken in as serial data at the rising edge of an SCL-I signal. When serial data is received in a different format from the communication format, the data will be invalid.

When the START signal, "111111111" is detected, the communication circuit takes in data as new serial data, whether it is on stand-by or in the middle of intake of serial data.

Input signals to SDA-I and SCL-I will be output via the asynchronous buffer to SDA-O and SCL-O without going through the filter circuit.

Communication Format

Description of Communication Format

Device Selection Data	Device ID	Device-specific ID (Fixed to "00" for this IC)
101	Device Address A	Specified with the ADRA0 to 2 terminals
11/1/10	Device Address B	Specified with the ADRB0 to 2 terminals
Control Data	Control	Specifies control (data saving / immediate reflection)
WWW	Output Address	Specifies the terminal to output (Individual specification and collective specification are possible)
Lighting Data	Lighting Speed	Specifies changing speed of free-running gradation control (32 levels)
WW	Lighting Gradation	Specifies the brightness of lighting (16 levels)

■ Control Command

Device Selection Data (8 bits)

		V. CC	Device selection	data dvc_dat (7:0)) V.Co	TW	11/11/11
De	vice ID	W.100 F	Device Address	A	Too COM	Device Address	B
0	0	ADRA2	ADRA1	ADRA0	ADRB2	ADRB1	ADRB0

The device ID is fixed. The correspondence between the device addresses A and B and the setting terminals ADRA0 to 2 and ADRB0 to 2 is shown in the table. (Setting "L"...Data "0". Setting "H"...Data "1").

When ADRA0 to 2 = "111", the device address A line is specified collectively, and when ADRB0 to 2 = "111", the device address B line is specified collectively.

Because up to 7 addresses can be specified for each of device address A and device address B, their combination allows the specification of up to 49 addresses.

Control Data (7 bits)

	W.100 - CO	Co	ntrol data ctrl_dat (6	6:0)							
Control	1001.00	Output Address									
ctrl	o_adr(5)	o_adr(4)	o_adr(3)	o_adr(2)	o_adr(1)	o_adr(0)					

The control signal, 'ctrl', activates the operational control shown in the following table.

- When ctrl = "0", latch operation is activated, in which data is only stored in latch registers and will not be reflected in the output.
- When ctrl = "1", load operation is activated, in which data is stored in the specified latch registers and the data of the latch registers in all addresses will be stored in the load registers.

00	Control (ctrl)	Operational Control
	0	Latch
To	COM	Load

The output terminals in the following table are specified with the output address o_adr(5:0)

Lighting Data (9 bits)

ighting Data (9 bits)									
	MM	N.Jooy.Co	Lightir	ng data light_	dat (8:0)	OM.TA			
-1		Lighting speed	ON.	TAX Y	N. O.	Lighting	gradation		
spd(4)	spd(3)	spd(2)	spd(1)	spd(0)	brt(3)	brt(2)	brt(1)	brt(0)	

Lighting is controlled in each line with the values of the load registers. In lighting control, the gradation changes to the specified one at the specified lighting speed

The Lighting speed follows the table below.

The change time is specified with 5 bits;

Lighting Speed spd(4:0)					Change time per 1/15	Change time from 0/15 to 15/15 of		
(4)	(3)	(2)	(1)	(0)	of brightness	brightness (and vice versa)		
0	0	0	0	0	Less than 60 μs	Less than 1 ms		
0	0	0	0	1	8.5 ms	0.128 s		
0	0	0	1	0	10.7 ms	0.160 s		
0	0	0	1	1	12.8 ms	0.192 s		
0	0	1	0	0	14.9 ms	0.224 s		
0	0	1	0	1	17.1 ms	0.256 s		
0	0	1	1.	0	21.3 ms	0.320 s		
0	0	1	1	1	25.6 ms	0.384 s		
0	1	0	0	0	29.9 ms	0.448 s		
0	1	0	0	1.	34.1 ms	0.512 s		
0	1	0	1	0	42.7 ms	0.640 s		
0	1	0	1	1	51.2 ms	0.768 s		
0	1	1	0	0	59.7 ms	0.896 s		
0	1	1	0	1	68.3 ms	1.024 s		
0	1	1	1	0	85.3 ms	1.280 s		
0	1	1	1	1	102 ms	1.536 s		
1	0	0	0	0	119 ms	1.792 s		
1	0	0	0	1	137 ms	2.048 s		
1	0	0	1	0	171 ms	2.560 s		
1	0	0	1	1	205 ms	3.072 s		
1	0	1	0	0	239 ms	3.584 s		
1	0	1	0	1	273 ms	4.096 s		
1	0	1	1	0	341 ms	5.120 s		
1	0	1	1	1	410 ms	6.144 s		
1	1	0	0	0	478 ms	7.168 s		
1	1	0	0	1	546 ms	8.192 s		
1	1	0	1	0	683 ms	10.24 s		
1	1	0	1	1	819 ms	12.29 s		
1	1	1	0	0	956 ms	14.34 s		
1	1	1	0	1	1,092 ms	16.38 s		
1	1	1	1	0	1,365 ms	20.48 s		
1	1	1	1	1	1,638 ms	24.58 s		

Note: The change time per 1/15 of brightness represents the time required for a change from, for example, 10/15 to 11/15 of brightness.

The change time from 0/15 to 15/15 of brightness and vice versa represents the time required for a change from 0/15 of brightness (light OFF) to 15/15 of brightness (light completely ON). However, these times are median values and depend on the driving output PWM cycle.

The Lighting gradation follows the table below.

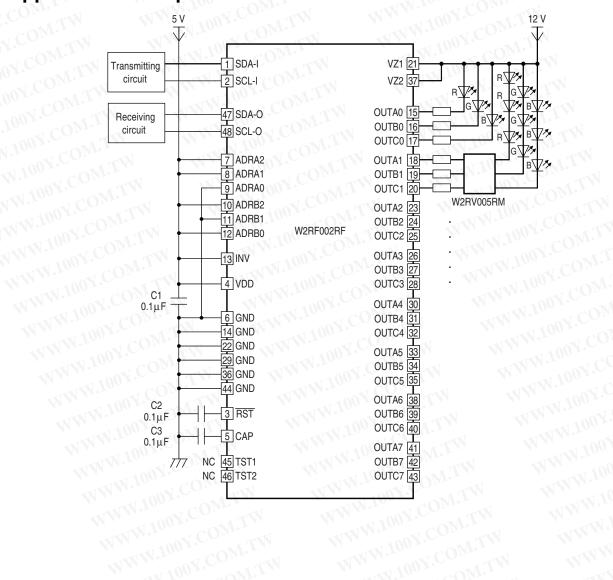

The brightness is specified with 4 bits;

(3)	(2)			Brightness	PWM duty ration (reference)	
		(1)	(0)	NT.L.		
0	0	0	0	0/15 (light OFF)	0 %	
0	0	0	1	1/15	0.42 %	
0	0	1	0	2/15	0.84 %	
0	0	1	1	3/15	1.25 %	
0	1	0	0	4/15	1.78 %	
0	1	0	1	5/15	2.61 %	
0	1	1	0	6/15	3.76 %	
0	1	1	1	7/15	5.42 %	
1	0	0	0	8/15	7.96 %	
1	0	0	1	9/15	11.3 %	
1	0	1	0	10/15	16.7 %	
1	0	1 1	1	11/15	23.3 %	
1	. 1	0	0	12/15	35.2 %	
1	1	0	1	13/15	48.4 %	
1	1	1	0	14/15	73.4 %	
10	1	1	1	15/15 (Light completely ON)	100 %	

■ Functional Terminals/Setting Terminals

ADR terminals	The ADRA terminal and ADRB terminal set device address A and device address B, respectively. For "H" setting, connect the terminal to $V_{\rm DD}$ and for "L" setting, connect the terminal to GND						
INV terminal	This terminal sets the polarity of OUT terminal. • When the terminal is used with "L" as active (e.g., for directly driving an LED), connect the terminal to V _{DD} • When the terminal is used with the "H" as active (e.g., for driving an LED with a driving transistor), connect the terminal to GND.						
RST terminal	When the voltage of the RST terminal becomes "L", the internal circuit will be reset and the output will be open.

Precautions for Use

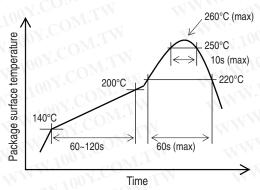

■ Correct Use

- The absolute maximum rating is the limit value which should not be exceeded even in a flash. Exceeding this value can cause deterioration of the characteristics or complete failure of the IC.
- Check the operation at the communication frequency to be used before using the device.
- Sufficiently take into consideration the static electricity, chattering and voltage of the input to be connected when determining each input circuit.
- Although the device contains an ESD protection circuit, static electricity that exceeds the function may damage the device. When handling the device, exercise due caution by, for example, grounding the human body.
- Due to potential damage, do not use product that has been dropped or that has come into contact with water.

■ Recommended Reflow Conditions

Allowable Temperature Profile Conditions

Product mounting method should be by Reflow and we recommend the following temperature profile. Reflow no more than two times, maximum.

Storage Conditions before Mounting

Moisture absorption by the plastic package will increase the possibility of faults, such as cracks; therefore, take enough care for storage.

Storage Conditions	Period		
5 to 30°C, 40 to 70%RH	One Year		

■ RoHS Directive Compliance

Models that are indicated as being RoHS compliant are free of the following six substances.

 Lead:
 1,000 ppm max.

 Mercury:
 1,000 ppm max.

 Cadmium:
 100 ppm max.

 Hexavalent chromium:
 1,000 ppm max.

 PBB:
 1,000 ppm max.

 PBDE:
 1,000 ppm max.
