DM74LS534
Octal D-Type Flip-Flop with 3-STATE Outputs

General Description

The DM74LS534 is a high speed, low power octal D-type flip-flop featuring separate D-type inputs for each flip-flop and 3-STATE outputs for bus oriented applications. A buffered Clock (CP) and Output Enable ($\overline{OE}$) is common to all flip-flops. The DM74LS534 is the same as the DM74LS374 except that the outputs are inverted.

Functional Description

The DM74LS534 consists of eight edge-triggered flip-flops with individual D-type inputs and 3-STATE true outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable ($\overline{OE}$) LOW, the contents of the eight flip-flops are available at the outputs. When the $\overline{OE}$ is HIGH, the outputs go to the high impedance state. Operation of the $\overline{OE}$ input does not affect the state of the flip-flops.

Input Voltage	7V
Operating Free Air Temperature Range	0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
