

### SOT-23, 44V, Over-The-Top, Micropower, Precision Rail-to-Rail Comparator

勝特力材料 886-3-5753170  
 勝特力电子(上海) 86-21-34970699  
 勝特力电子(深圳) 86-755-83298787  
[Http://www.100y.com.tw](http://www.100y.com.tw)

### FEATURES

- Operates from 2.7V to 44V
- **Over-The-Top<sup>®</sup>: Input Common Mode Range Extends 44V Above V<sup>-</sup>, Independent of V<sup>+</sup>**
- **Micropower: 35 $\mu$ A I<sub>Q</sub>**
- **Offset Voltage: 1.5mV Max**
- **5-Pin SOT-23 Package**
- **Valid Output with Either Input 5V Below V<sup>-</sup>**
- Rail-to-Rail Output Swing
- Output Can Drive Loads Above V<sup>+</sup>
- Internal Pull-Up Current
- -40°C to 125°C Operating Temperature Range

### APPLICATIONS

- Power Supply Monitors
- Relay/Lamp Driver
- Oscillators
- Peak Detector
- Level Shifting

### DESCRIPTION

The LT<sup>®</sup>1716 comparator operates on any total power supply voltage between 2.7V and 44V drawing 35 $\mu$ A of quiescent current. The LT1716 has a unique input stage that can be taken 44V above V<sup>-</sup>, independent of V<sup>+</sup> supply. (Built-in resistors protect the inputs for faults below the negative supply of up to 5V.) The inputs can withstand 44V both differential and common mode.

The output stage includes a class “B” pull-up current source, eliminating the need for an external resistive pull-up and saving power. Output voltage swings to within 35mV of the negative supply and 55mV of the positive supply, which makes the comparator a good choice for low voltage single supply operation. The output stage is also designed to drive loads connected to a higher supply than the LT1716 supply, the same as an open collector output stage.

The LT1716 is available in a SOT-23 5-lead package.

LT, LTC and LT are registered trademarks of Linear Technology Corporation. Over-The-Top is a registered trademark of Linear Technology Corporation.

### TYPICAL APPLICATION

**Input Bias Current vs Input Bias Voltage**

# LT1716

## ABSOLUTE MAXIMUM RATINGS

(Note 1)

Supply Voltage ( $V^+$ to $V^-$ ) .....	44V
Differential Input Voltage .....	44V
Input Voltage .....	44V, -5V
Output Short-Circuit Duration (Note 2) .....	Indefinite
Operating Temperature Range (Note 3)	
LT1716C/LT1716I .....	-40°C to 85°C
LT1716H .....	-40°C to 125°C
Specified Temperature Range (Note 4)	
LT1716C/LT1716I .....	-40°C to 85°C
LT1716H .....	-40°C to 125°C
Maximum Junction Temperature .....	150°C
Storage Temperature Range .....	-65°C to 150°C
Lead Temperature (Soldering, 10 sec) .....	300°C

## PACKAGE/ORDER INFORMATION

	ORDER PART NUMBER

**Note 1:** Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

**Note 2:** A heat sink may be required to keep the junction temperature below absolute maximum.

**Note 3:** The LT1716C/LT1716I are guaranteed functional over the operating temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ . The LT1716H is guaranteed functional over the operating temperature range of  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

**Note 4:** The LT1716C is guaranteed to meet specified performance from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ . The LT1716C is designed, characterized and expected to

meet performance from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$  but is not tested or QA sampled at the temperatures. The LT1716I is guaranteed to meet specified performance from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ . The LT1716H is guaranteed to meet specified performance from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

**Note 5:** This parameter is not 100% tested.

**Note 6:** Typical input offset voltage of  $500\mu\text{V}$  at  $V_{CM} = 44\text{V}$  above  $V^-$  and a maximum input offset voltage of  $4\text{mV}$  at  $V_{CM} = 44\text{V}$  above  $V^-$ .

**Note 7:** If one input is within this input range, the other input can go  $5\text{V}$  below  $V^-$  and the output will be valid.

 $V_{IN-} = 21.01V$

1716 G20

Response Time

$V_S = 5V$   
 $V_{OD} = 10mV$   
 $R_L = 10k, 100k, OPEN$   
 $V_{IN+} = 2.4V TO 2.5V$   
 $V_{IN-} = 2.49V$

1716 G21

Response Time

$V_S = 5V$   
 $V_{OD} = 10mV$   
 $R_L = 10k, 100k, OPEN$   
 $V_{IN+} = 2.6V TO 2.5V$   
 $V_{IN-} = 2.51V$

1716 G22

Response Time

$V_S = \pm 15V$   
 $V_{OD} = 10mV$   
 $R_L = 10k, 100k, OPEN$   
 $V_{IN+} = -100mV TO 0V$   
 $V_{IN-} = -10mV$

1716 G23

Response Time

$V_S = \pm 15V$   
 $V_{OD} = 10mV$   
 $R_L = 10k, 100k, OPEN$   
 $V_{IN+} = 110mV TO 0mV$   
 $V_{IN-} = 10mV$

1716 G24

Below  $V_S^-$  Fault (Rising)

$V_S = \pm 15V$   
 $R_L = 10k, 100k, OPEN$   
 $V_{IN+} = -19V TO -14.9V$   
 $V_{IN-} = -15V$

1716 G25

Below  $V_S^-$  Fault (Falling)

$V_S = \pm 15V$   
 $R_L = 10k, 100k, OPEN$   
 $V_{IN+} = -14.9V TO -19V$   
 $V_{IN-} = -15V$

1716 G26

## APPLICATIONS INFORMATION

The LT1716 comparator features low power operation with exceptional input precision with rail-to-rail input and output swing. The comparator operates flawlessly even when the inputs are pulled over the positive rail or below the negative rail.

### Supply Voltage

The LT1716 operates from 2.7V to 44V. The comparator can be shut down by removing  $V^+$ . In this condition, the input bias current is typically less than 3nA, even if the inputs are 44V above the negative supply. The LT1716 is protected against reverse battery voltages of up to 20V. The reverse battery current is resistive as shown in the reverse supply current graph.

### Inputs

The comparator inputs can swing from 0.5V above to 44V above  $V^-$ . If one input is within this range, the other input can be forced up to 5V below  $V^-$  without phase reversal occurring at the output.

The LT1716 has three stages—NPN, PNP and common base (see Simplified Schematic)—resulting in three distinct operating regions and two transition regions as shown in the Input Bias Current vs Common Mode typical performance curve.

For input voltages about 0.8V or more below  $V^+$ , the PNP input stage is active and the input bias current is typically  $-4\text{nA}$ . The PNP differential input stage will have bias current that flows out of the device. With a differential input voltage of even just 100mV or so, there will be zero bias current into the higher of the two inputs, while the current flowing out of the lower input will be twice the measured bias current.

When the input voltage is about 0.5V or less from  $V^+$ , the NPN state is operating and the input bias current is typically 10nA. Increases in temperature will cause the voltage at which operation switches from the PNP stage to the NPN stage to move towards  $V^+$ . The input offset voltage of the NPN stage is untrimmed and is typically 500 $\mu\text{V}$ .

A Schottky diode in the collector of each NPN transistor of the NPN input stage allows the LT1716 to operate with either or both of its inputs above  $V^+$ . At about 0.3V above  $V^+$ , the NPN transistor is fully saturated and the input bias current is typically 4 $\mu\text{A}$  at room temperature. The input offset voltage is typically 500 $\mu\text{V}$  when operating above  $V^+$ . The LT1716 will operate with its input 44V above  $V^-$ , regardless of  $V^+$ .

The transition to the negative common mode input stage occurs at 0.3V above  $V^-$ . Above this trip point the PNP stage is active. When the inputs are 0.3V below  $V^-$ , the common base input stage is active in addition to the PNP stage. The input bias current out of each input becomes  $V_{IN}/5\text{k}\Omega$ . The LT1716 is designed to operate when either input falls below the negative supply. Internal resistors protect the inputs for faults below the negative supply of up to 5V without phase reversal. The built-in 5k resistor limits the current at each input to 1mA at 5V below the negative supply. External matched input resistors can be added for increased voltage fault operation below the negative supply but the maximum input current should be kept under 1mA.

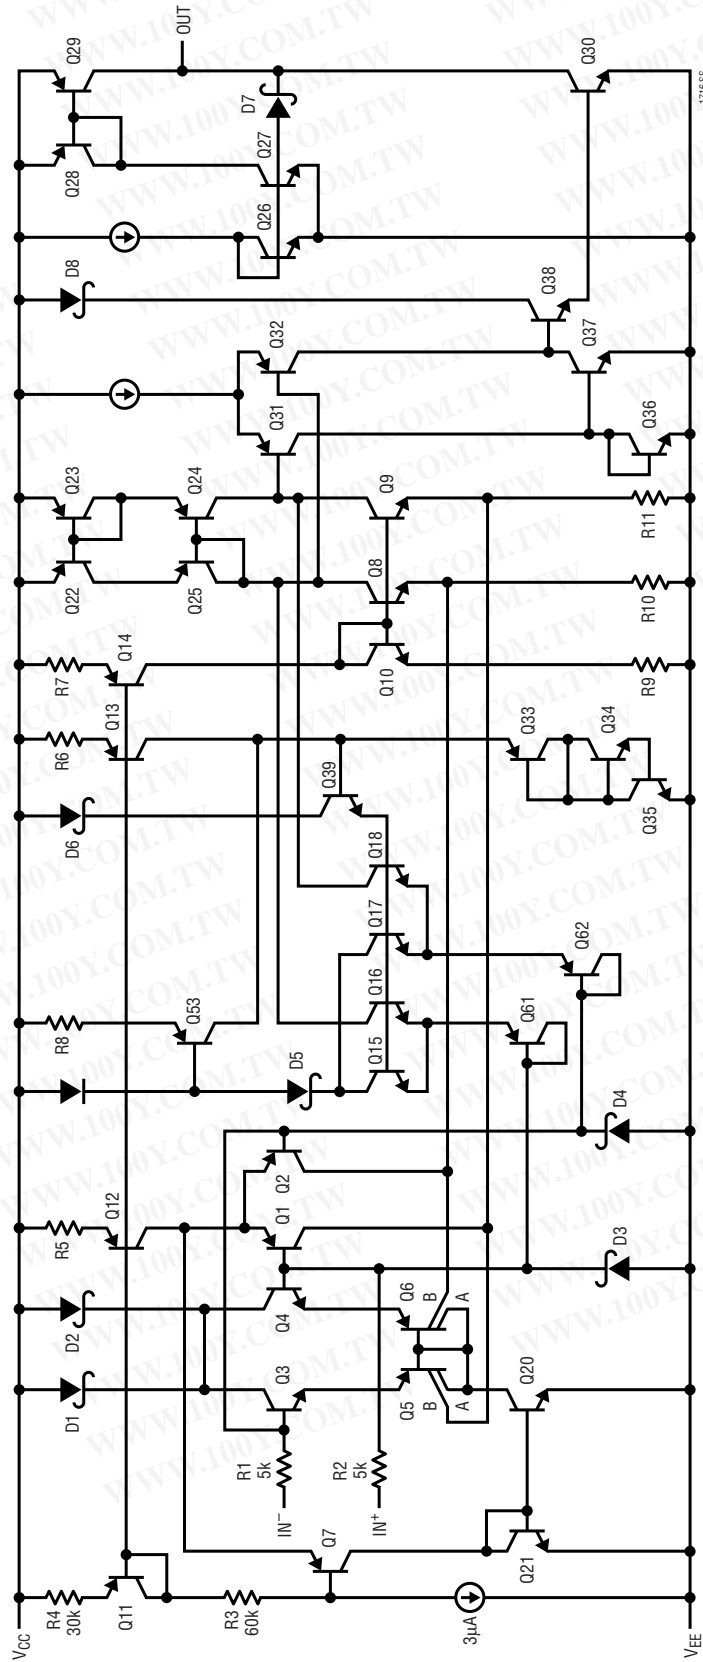

### Input Protection

The inverting and noninverting input pins of the LT1716 have on-chip protection. ESD protection is provided to prevent damage during handling. The input transistors have voltage clamping and limiting resistors to protect against excursions as much as 5V below  $V^-$ . There are no clamping diodes between the inputs and the maximum differential input voltage is 44V.

### Output

The output stage of the LT1716 can drive loads connected to a supply more positive than the device, the same as comparators with open collector output stages. The output of the LT1716 can be pulled up to 44V above  $V^-$ , regardless of  $V^+$ .
