

## TDE1798

### 0.5A INTELLIGENT POWER SWITCH

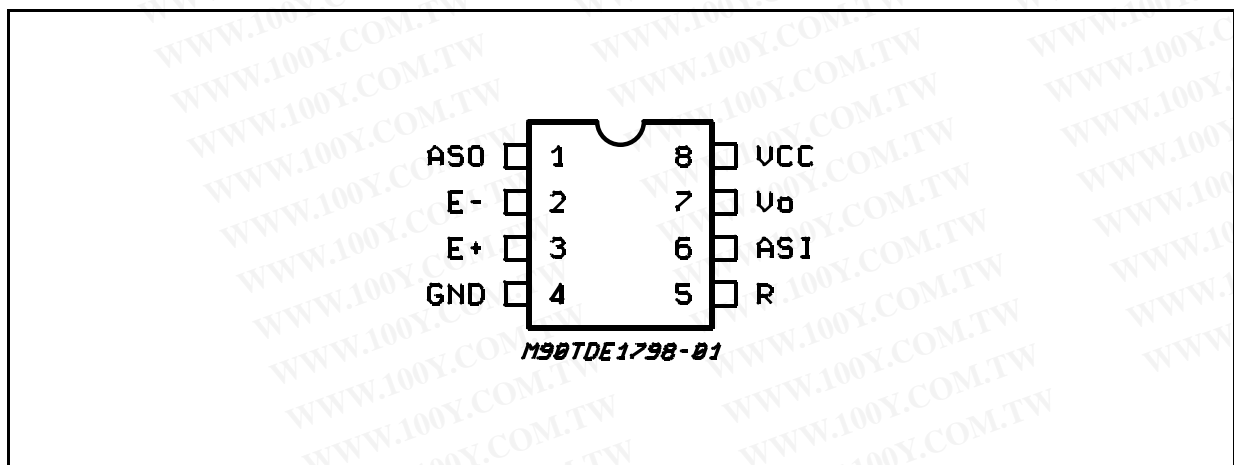

- HIGH OUTPUT CURRENT 500mA
- SHORT-CIRCUIT PROTECTION UP TO  $V_{CC} = +35V$
- INTERNAL THERMAL PROTECTION WITH EXTERNAL RESET AND SYNCHRONIZATION CAPABILITY
- OPEN GROUND PROTECTION
- OUTPUT VOLTAGE CAN BE LOWER THAN GROUND FOR FAST INDUCTIVE LOAD DEMAGNETIZATION
- DIFFERENTIAL INPUTS FOR ANY LOGIC SYSTEM COMPATIBILITY
- INPUT VOLTAGE CAN BE HIGHER THAN  $V_{CC}$
- LARGE SUPPLY VOLTAGE RANGE FROM 6V TO 35V
- SINK AND SOURCE ALARM OUTPUTS
- NO NEED FOR EXTERNAL CLAMPING DIODE FOR DEMAGNETIZATION ENERGY UP TO 150mJ
- SEVERAL DEVICES CAN BE CONNECTED IN PARALLEL

#### DESCRIPTION

The TDE1798 is an interface circuit delivering high currents and capable of driving any type of loads.

The output is protected from short-circuits with the positive supply or ground. In addition thermal shut down is provided to keep the IC from overheating. If internal dissipation becomes too high,

#### PIN CONNECTION (Top view)

the driver will shut down to prevent excessive heating. The output stays null after the overload is off, if the reset input is low. If high, the output will alternatively switch on and off until the overload is removed.

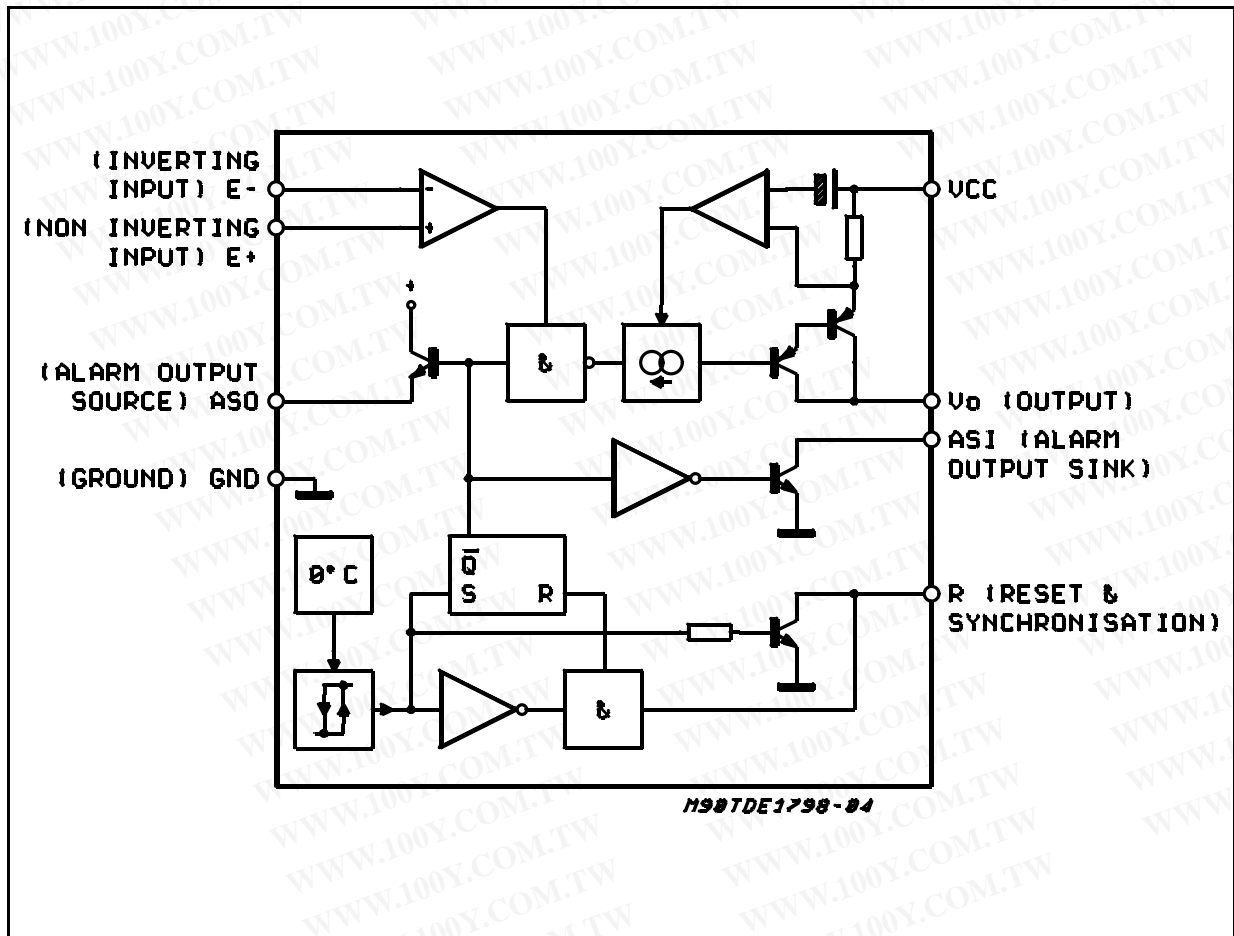

Higher current can be obtained by paralleling the outputs of several devices. In this case, the devices can be reactivated simultaneously after an overload if their reset input are connected in parallel.

The device operates over a wide range of supply voltages from standard  $\pm 15$  operational amplifier supplies to the single  $\pm 6V$  or  $+35V$  used for industrial electronic systems. Input voltage can be higher than the  $V_{CC}$ . The output is low in open ground conditions.

**ABSOLUTE MAXIMUM RATINGS**

Symbol	Parameter	Test Conditions	Unit
V <sub>CC</sub>	Supply Voltage	50	V
V <sub>ID</sub>	Input Differential Voltage	50	V
V <sub>I</sub>	Input Voltage	-30 to +50	V
V <sub>I(reset)</sub>	Reset Input Voltage	V <sub>CC</sub> -50 to V <sub>CC</sub>	V
I <sub>O</sub>	Output Current	internally limited	A
P <sub>tot</sub>	Power Dissipation	Internally Limited	mW
	Reset Input Sink Current (in thermal shut-down)	15	mA
W <sub>D</sub>	Repetitive Maximum Demagnetization Energy - 10 <sup>6</sup> Operations	150	mJ
T <sub>op</sub>	Operating Ambient Temperature Range	-25 to +85	°C
T <sub>stg</sub>	Storage Temperature Range	-65 to +150	°C
I <sub>A(sink)</sub>	Alarm Output Sink Current	25	mA
I <sub>A(source)</sub>	Alarm Output Source Current	12	mA

## THERMAL DATA

Symbol	Description	Value	Unit
$R_{th\ j-case}$	Thermal Resistance Junction-case (1)	max. 30	$^{\circ}C/W$
$R_{th\ j-ambient}$	Thermal Resistance Junction-ambient (1)	max. 90	$^{\circ}C/W$

1) Devices bounded on a 40cm<sup>2</sup> glass-epoxy printed circuit 0.15cm thick with 4cm<sup>2</sup> of copper

## ELECTRICAL CHARACTERISTICS (note 2)

TDE  $-25^{\circ}C \leq T_j \leq +85^{\circ}C$ ,  $6V \leq V_{CC} \leq +35V$ ,  $I_o \leq 500mA$  (unless otherwise specified).

Symbol	Parameter	Test Condition	Min.	Typ.	Max.	Unit
$V_{IO}$	Input Offset Voltage	(note 3)	–	2	50	mV
$I_{CC}$	Power Supply Current	Output High ( $T_{amb} = +25^{\circ}C$ , $I_o = 500mA$ ) Output Low	– –	6.5 2	8 4	mA mA
$I_B$	Input Bias Current		–	15	40	$\mu A$
$V_{ICR}$	Common-mode Input Voltage Range	(note 4)	1	–	45	V
$V_I$	Input Voltage Range	$V_{ref} > +1V$ , (note 4 and 5)	-25	–	45	V
$I_{SC}$	Short-circuit Output Current	$V_{CC} = 30V$ , $t = 10ms$	0.7	0.9	1.3	A
$V_{CC} - V_O$	Output Saturation Voltage	$I_o = 500mA$ ( $ V^+ I - V^- I  > 50mV$ )	–	1	1.25	V
$I_{OL}$	Output Low Leakage Current	$T_j = +85^{\circ}C$ ( $V_{CC} = 30V$ , $V_O = 0V$ )	–	10	100	$\mu A$
$I_{(pin\ 1)\ source}$ $I_{(pin\ 6)\ sink}$	Available Alarm Output Current	Source ( $V_{(pin\ 1)} = V_{CC} - 2.5V$ ) Sink (in thermal shut-down) $V_{(pin\ 6)} = 2V$	4 6	8 15	– –	mA mA
$I_{RH}$ $I_{RL}$	Reset Input Current		– -1	15 0	40 +1	$\mu A$ $\mu A$
$V_{th}$	Reset Threshold		0.8	1.4	2	V
$I_{reset}$	Reset Output Sink Current	(in thermal shut-down) for $V_{reset} \leq +0.8V$	2	–	–	mA
$I_{OL(open\ GND)}$	Output Leakage Current	(open ground)	–	10	100	$\mu A$
$V_{BRVEO}$	Output Transistor Avalanche Volt.	$V_{CC} - V_O$	65	–	110	V

## Notes:

- 2) For operating at high temperature, the TDE1798 must be derated based on a 150 $^{\circ}C$  maximum junction temperature and the junction-ambient thermal resistance.
- 3) The offset voltage given is the maximum value of input differential voltage required to drive the output voltage within 2V of the ground or the supply voltage;
- 4) Input voltage range is independent of the supply voltage;
- 5) The reference input can be the inverting or the non-inverting one.

SHORT CIRCUIT CONDITIONS WITH AUTOMATIC RESET

SHORT CIRCUIT CONDITIONS WITH CONTROLLED RESET

DEMAGNETIZATION OF INDUCTIVE LOADS WITHOUT EXTERNAL CLAMPING DEVICES.

With no external clamping device, the energy of demagnetization is dissipated in the TDE1798 output stage, and the clamping voltage is the collector-emitter breakdown voltage  $V_{(BR)CEO}$ .

This method provides a very fast demagnetization of inductive loads and can be used up to 150 mJ. The amount of energy  $W$  dissipated in the output stage during a demagnetization is :

$$W = V_{(BR)} \frac{L}{R} \left[ I_o - \frac{V_{(BR)} - V_{CC}}{R} \text{Log} \left( 1 + \frac{V_{CC}}{V_{(BR)} - V_{CC}} \right) \right]$$

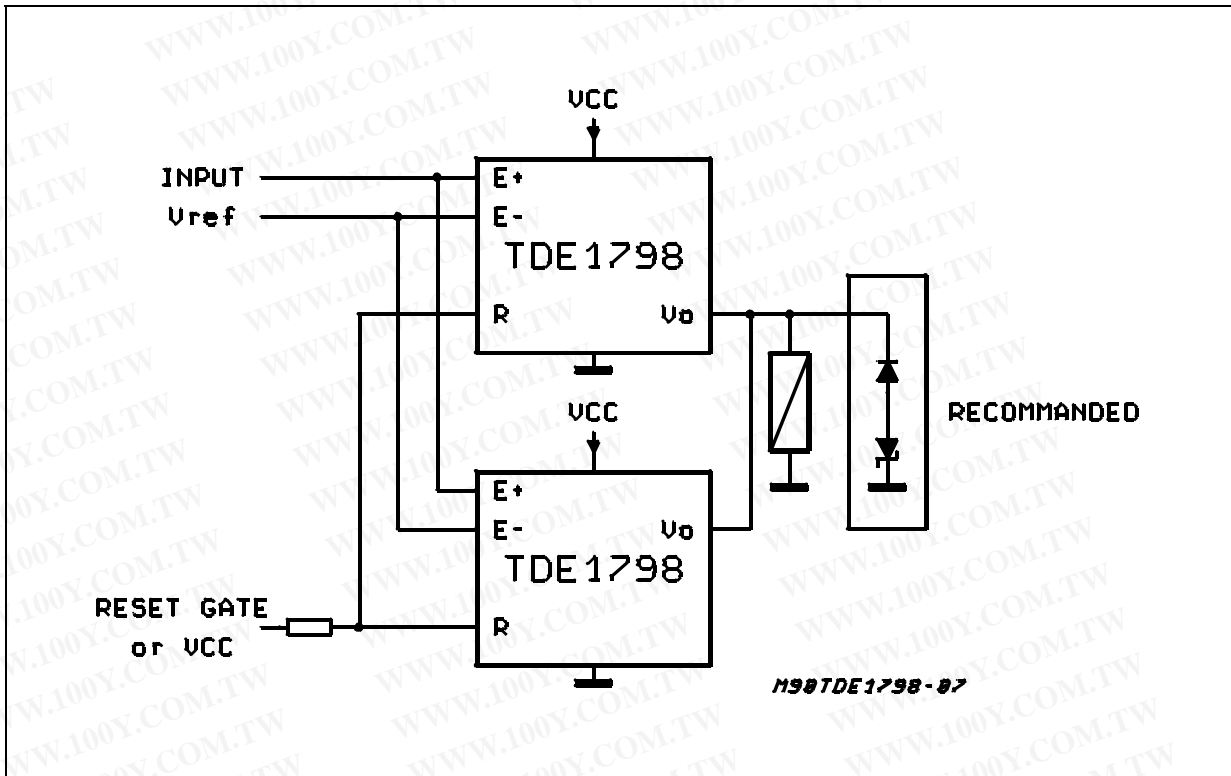

**Remark 1** : This energy is dissipated inside the case, then must be included in the whole power dissipation.

**Remark 2** : The use of external clamping device is recommended in case of parallel driving of

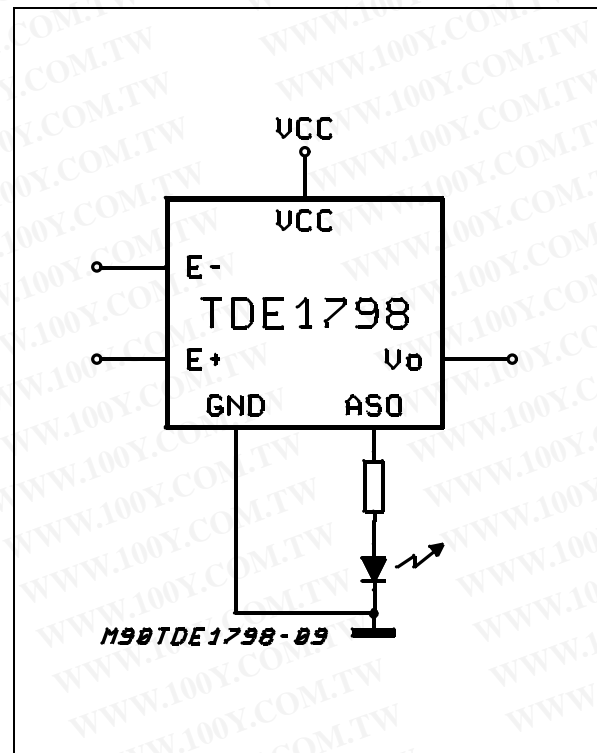

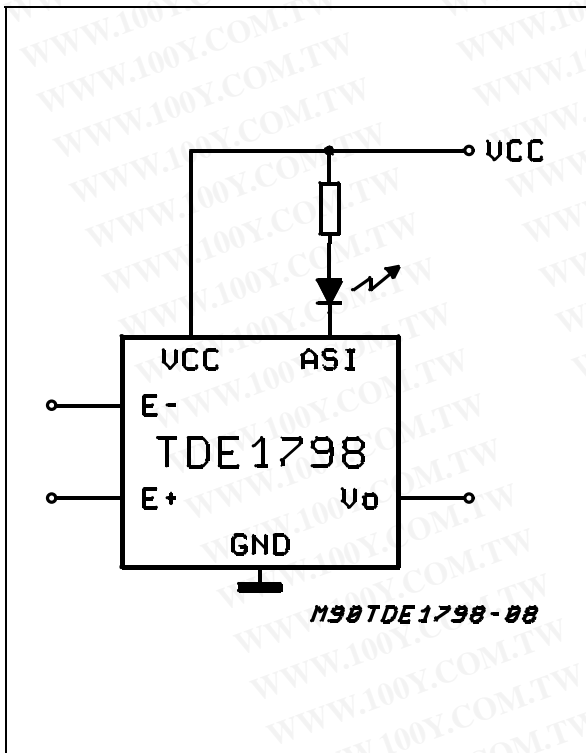

loads. The dispersion of the collector-emitter breakdown voltage  $V_{(BR)}$  would induce the circuit with the lowest  $V_{(BR)}$  to dissipate the whole demagnetization energy (which is roughly proportional to  $I_o^2$ ).

## PARALLEL ALARM OUTPUTS

## INTERFACE BETWEEN HIGH VOLTAGE AND LOW VOLTAGE SYSTEM

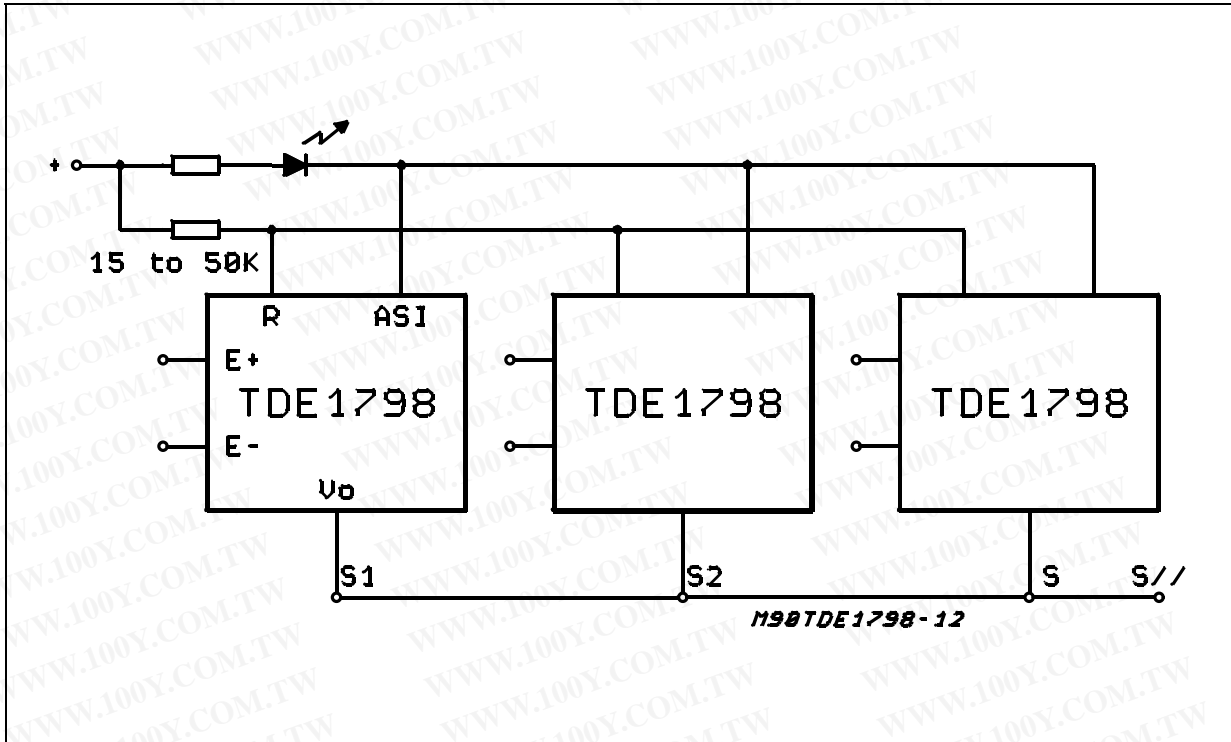

RESET AND SYNCHRONIZATION

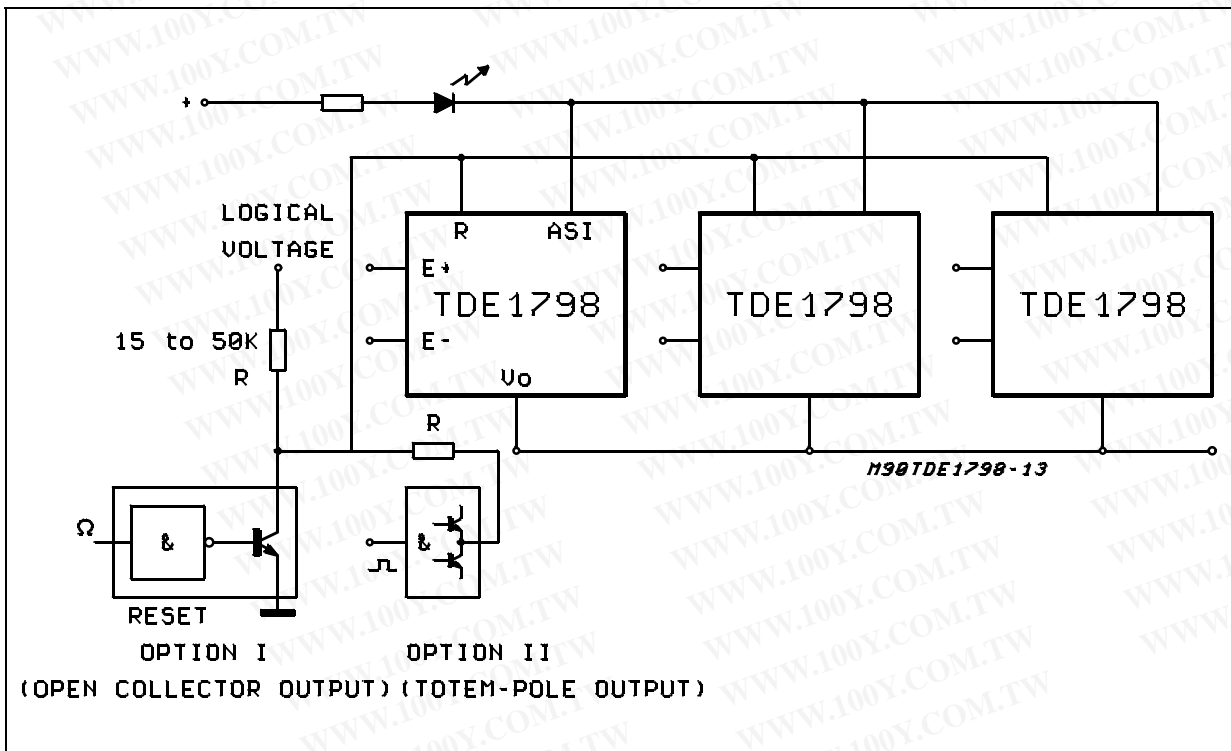

Recommended diagram when the outputs are in parallel. After thermal disjunction a restart is possible when all the circuits are returned in operating conditions.

sible when all the circuits are returned in operating conditions.

SYNCHRONOUS AUTOMATIC RESET (parallel or independent outputs)

SYNCHRONOUS CONTROLLED RESET (parallel or independent outputs)

## TDE1798

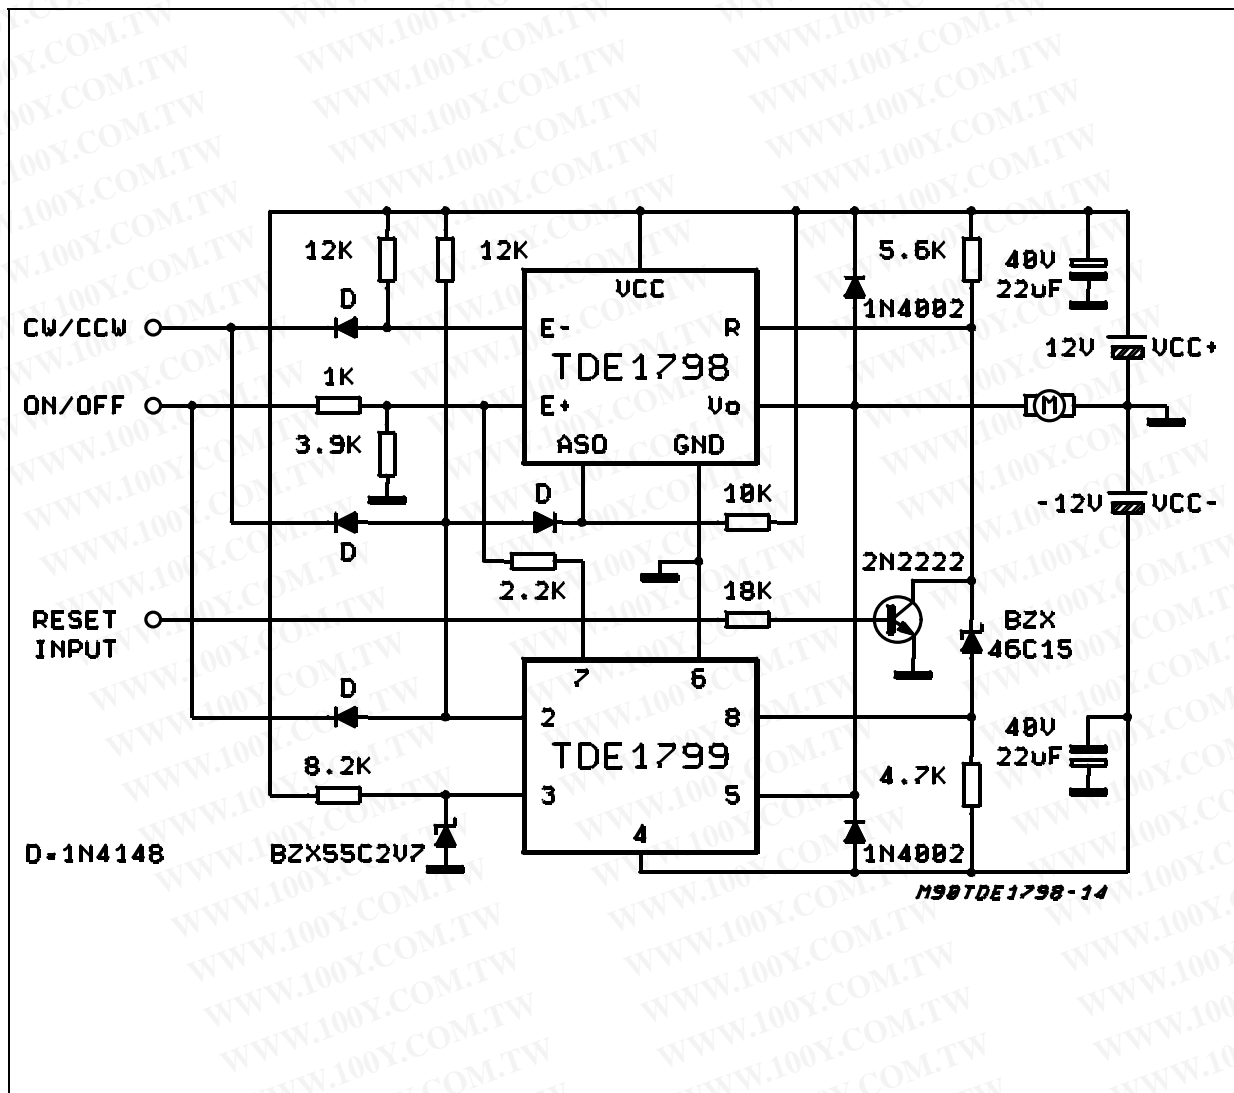

### TWO QUADRANTS D.C. MOTOR DRIVE

#### MAIN FEATURES

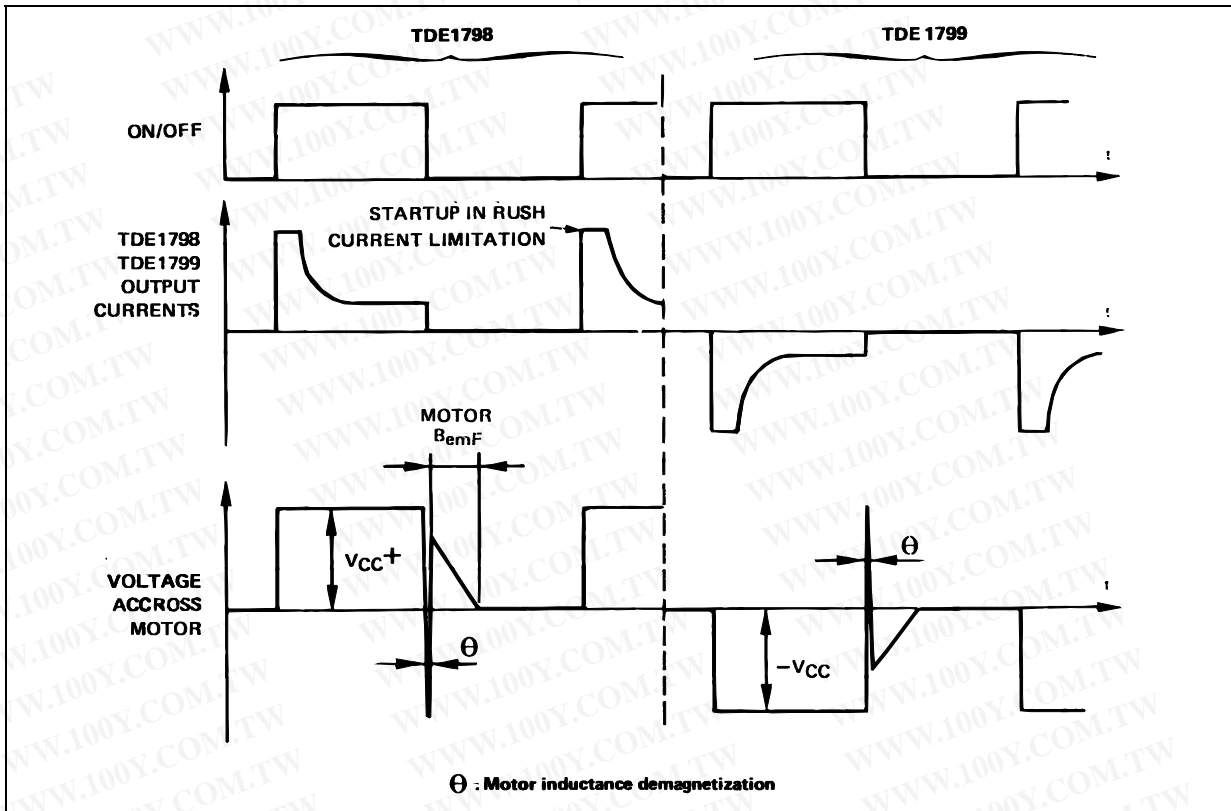

- $V_{CC} - V_{EE} \leq 50V$
- Maximum output current 0.5A
- Full protection against overloads and short-circuits
- No need of deadtime during rotation reversing
- TTL compatible inputs
- TDE1799 and TDE1798 input signals have the same reference

- No automatic restart after disjunction
