FSAV450

800MHz Quad SPDT LCD/Plasma Video Switch

General Description

FSAV450 is a 5V, high performance analog video switch specially designed for the route of analog RGB signals especially for applications with minimum cross-talk requirements such as LCD panels and plasma TV with dual RGB or S-video inputs. The wide bandwidth (800MHz) of this switch allows signal pass with minimum edge and phase distortion while -75dB non-adjacent channel crosstalk and -60dB OFF Isolation generates ignorable image noise between active channels. Optimized differential gain and differential phases maintain the image integrity for video applications while low On Resistance offers smallest signal insertion loss.

Features

- -60dB OFF Isolation at 10MHz
- -75dB non-adjacent channel crosstalk at 10MHz
- 4Ω typical On Resistance (R_{ON})
- -3dB bandwidth: 800MHz
- Low power consumption (1uA max)
- Control input: TTL compatible

Applications

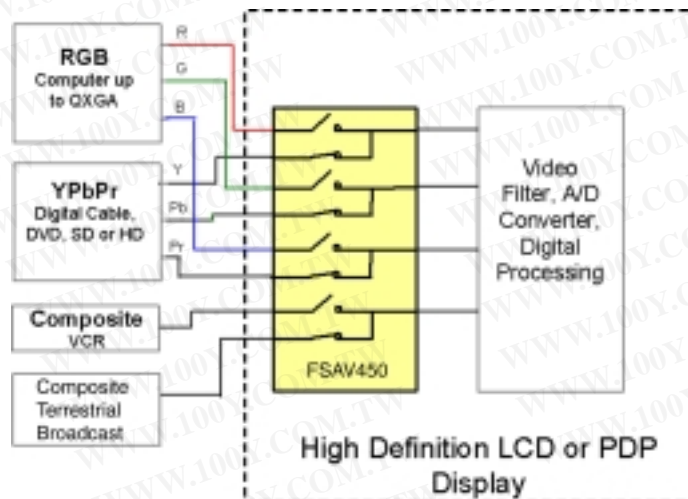

- RGB Video Switch in LCD, plasma and projector displays
