Weller®

Founded in 1945, Weller has become the world's leading supplier of professional quality soldering equipment, including the famous Weller temperature controlled irons and soldering guns. Weller makes advanced soldering and desoldering stations and irons for sophisticated industrial needs, plus a series of handy soldering and miniature power tool kits for home craftsmen, hobbyists and light industry.

Magnastat Controlled Station

The Weller Magnastat system operates through a ferro-magnetic sensing device which changes its characteristics when a specific temperature is reached. This causes it to either attract or repel a permanent magnet which operates a power supply switch. In this way power to the heating element can be quickly switched on or off to either provide extra power for soldering operations or reduced power when idling. Working temperature selection is achieved by simply changing the 'temperature sensing' soldering tip. These are available in temperature ratings of 315°C, 371°C and 427°C. The tips are made of pure copper for effective heat conductivity. The heating element has an optimal heating effect on the tip. This is possible through high precision of the tubes, the winding and insulation, which means that the heating element should never be gripped with pliers or be hammered in any way. It is quite sufficient to secure the soldering tip by tightening it into the tip sleeve by hand (when the iron is cold).

Temperature Controlled Stations

WHS40

Soldering Station - 40W/230V

· The temperature range can be controlled between 200°C and 450°C

 The WHS40 soldering station from Weller rules out the risk of temperature shocks which can occur with conventional soldering bits.

 Desired temperatures can be set precisely in such a way that you no longer have to worry about overheating sensitive areas.

· Consists of power unit, soldering iron with nickel plated 2.00mm tip and support.

WHS40D

Soldering Station - 40W/230V - Digital

- 2mm straight nickel tip
- The new electronically controlled soldering station WHS40D operates with a temperature range of 150°C -450°C.
- The precise soldering tip temperature shows on the digital read-out (pre-set and real value).
- . This soldering station is suitable for delicate soldering tasks on temperature sensitive components.
- LED to monitor the heater is integrated in the display.
- The temperature adjusts via buttons.
- · Consists of power unit, soldering iron with "Longlife" tip 2.0mm and support.

T0056806599	

Electronically Controlled Stations

The Weller WES51D and WESD51D have been developed to provide precision electronic soldering at an affordable price. The tip temperature is electronically controlled and is within a tolerance of \pm 3%

WES51D
An economical soldering station with High-
End Performance. Ideal for continuous
production coldering

- Analogue temperature control
- Temperature lockout
- · Automatic shut off
- Slim comfortable pencil reduced operator fatigue
- Temperature range 150°C-450°C
- Max. power output 50W
- Assembled in Australia Soldering station consists of:
- WES51DPU 230V Power Unit
- PES51 50 Watt 24V Pencil
- PH50 Holder
- ETA tip

Soldering Tips: ET-Series see page 25

WESD51DAU

Ideal for production, rework and repair of through hole SMT boards, some ground planes and multi-layer boards.

- Digital microprocessor temperature control with LED display
- Wireless temperature lockout tool
- · Automatic shut off
- Tip temperature offset
- °C-°F switchable
- Temperature range 150°C-450°C
- Max. power output 50W
- · Assembled in Australia Soldering station consists of:
- WESD51DPU 230V Power Unit
- PES51 50 Watt 24V Pencil PH50 Holder
- ETA tip

WD1AU

80W Power Unit with Digital Display - Single port

- 3 "radio buttons" allows to pre-set frequently used temperature settings
- Extensive Special Functions menu allows you to utilize access features
- · Setback, lockout, temp. window, F/C switching, standby, auto-off time
- Large high contrast LCD display displays more information at a glance . Compatible with WP80 and WMP
- soldering pencils ESD safe to protect sensitive
- components
- ROHS & WEEE Compliant

WD1MAU 80W High Performance Power Unit - Single port

- 3 "radio buttons" allows to pre-set

WD1000HPT
The WD 1000HPT station features Weller's new 120 W soldering iron, the WP 120. This iron is ideal for soldering on difficult circuit boards with heat sinks that cause dissipation in heat transfer. Target applications include high density circuit boards, High Frequency / Radio Frequency applications, and solar panel production.
The Weller WD1000HPT station is specifically designed for soldering operations which need a combination of high energy and maximum precision.

- precision. The WD1000 HPT consists of-

WTA-50 SET

The WTA-50 tweezers can be used with all Weller Temtronic/SL series stations. Dual heating elements with independent temperature sensors provide the tips with constant temperature.

Temperature range 150°C - 450°C Output 2 x 25W Consists of:

- Desolder Tweezer
- AK51 Support
- Hex Key
- Supplied with WT1 tip See page 30 for WT tips
- ROHS & WEEE Compliant

100 Watt HAP1 Hot Air Pencil & WDH30 Stand. For both soldering and desoldering of SMD's. Temperature range 50°C - 550°C Power absorption 100W

Consists of:

- HAP1 hot air pencil
- WDH30 Safety Rest
- 1.2mm nozzle
- Xcelite Nutdriver P8 MM

See page 35 for nozzles

• ROHS & WEEE Compliant

T0052711899

HAP200 SET

Hot Air Pencil set 200W, 24V

The HAP200 provides a directional hot air flow that is adjustable. Electronic temperature control from 50°C to 550°C. Different nozzles available as accessory. Finger switch controls the adjustable pump. For WR 3M only.

HAP200 Nozzle Adapter See page 32 for Nozzles

- 80 watt
- 50°C-200°C
- 80 x 50mm
- for use with WSD81, WSD151, WMD series
- ROHS & WEEE Compliant

Description

WST82 Thermal Stripping Tool 80 W, 24 V, with flexcord.

The WST82 temperature controlled thermal stripping tool is suitable to all digital Weller stations with minimum 80 W. It strips off thermoplastic insulation materials by using precisely shaped stripping blades. The stripping lenth is adjusbale up to 30 mm. Optimal temperature control via power unit (accessory).

Soldering Aids

WDC2

W101CH Miniature temperature controlled
solder bath (330°C) with horizontal stand.
100W 230V Consists of:

- 100W Solder Bath with Insert
 Support for Solder Bath

ESF-120ESD

Printed circuit board holder

- · Adjustable to Eurocard size
- Suitable for holding irregular shaped cards Component support

WPBI Polishing Bar

 Rejuvenates tips without damage to the plated surface

WLSK200 Vacuum pen for easy pick up of small components. Fully self contained.

SD1000 Solder Dispenser
• For coils up to 1000g
• For use of coil up to length 95mm, core Ø > 17mm length 84mm, core \emptyset < 12mm

- ABW2 Extension for additional reel
 To be fixed on SD1000
 For coils up to 1000g
 For use of coil up to length 95mm, core Ø > 17mm length 70mm, core Ø < 12mm length 84mm, core Ø < 12mm length 84mm, core Ø < 12mm

- WDC Dry Cleaning System
 Very effective cleaning from oxides on solder tips especially when using lead free solder.

 Good stability (does not slide on work
- Good stability (does not slide on workbench)
 Longer life of metal wool due to tapping of the solder into the box before cleaning.
 Metal wool does not contain flux.
 User may use any flux which is accepted for his process.
 Cleaning result will be even better if wool is wetted with flux.

Electronic Temperature Measuring Equipment

Description	Material No.	Shelf Pack	
WTT1 Temperature measurement and calibration. • Measures temperature without imposing thermal load. The WTT1 digital temperature measuring system has been specifically designed for measuring the temperature of soldering iron tips. The probe has a double sensor system and internal heat source. The measured temperature is fed to a control system that records the flow of heat in the probe and stabilizes it with the aid of the internal heat source. This design ensures that no heat is drawn by the probe from the object being measured. Erroneous measurements due to the large thermal load of the probe are thus prevented. The measured temperature is indicated on a three-digit LED display to a resolution of 1°C. An adjustable preheat temperature ensures a rapid response even at high temperatures.	T0053124699	1 N

Repair/Rework Stations

All Weller repair and rework stations feature automatic tool recognition and will accept any Weller temtronic tool including the WTA50, desoldering tweezers, WSB80 and WSB150 solder baths and WST20 thermal strippers. These stations have a built in pump to supply vacuum for desoldering and air for hot air soldering and desoldering. Special desoldering heads for SMD components removal are available. A finger switch control on the desoldering tool handle and hot air pencil will operate th The hot air pencil (HAP1) is used for reflowing with solder paste or de an be desoldered with a suitable nozzle.

Hot Air Stations

The advanced technology of Weller hot air stations ensures greater controlled precision when soldering and desoldering sensitive SMD components. Medium to large SMD components are extremely susceptible to thermal and physical damage. Weller hot air stations provide gentle, controlled hot air flow being directed to the leads of the component. An in-built vacuum pick-up within the nozzle of the WHA2000 makes the removal and replacement of the component safe and easy without damaging the circuit board pads or component leads.

Dimensions 240 x 270 x 170 (W x L x H mm) Mains Voltage: 230V Max Heat Power: 700 w Temp Range: 50°C - 550°C

Repair/Rework BGA/QFP Stations

Weller remains at the forefront of Rework Technology. As on board components have become more and more complex Weller has led the field with innovative, user friendly repair and assembly tools that solve the rework problem. The introduction of the BGA was no exception, with its small footprint area, hidden connections, and high connection density, rework operators have been presented with very real placement and removal problems. The WQB 3000 machines are the second generation of the Weller BGA/SMT repair system. They meet the exceptional demands required of a modern rework tool and deliver the benefits at a value for money price. Weller has developed a comprehensive user friendly program for the removal and re-balling of BGA components, site preparation, solder paste printing, placement and re-flow, without the risk of thermal damage to the component or the circuit board. No matter what the component, BGA, QFN, QFP, PLCC, SOP, PGA or surface mounted sockets, Weller has the rework answer.

Due to the rapid advances in SMD component development, increasingly complex processes are demanded for assembly and rework. Ball Grid Array and fine pitch leaded component rework require considerable technical expertise to achieve a successful repair. The Weller WQB 3000 system has this capability.

Development of the temperature profile

- Repeatable results can only be achieved by a process cycle that considers all the parameters of the repair operation.
- To allow removal of the component from a circuit board without damage to the board, a temperature profile of the operation must be established.
 The "Self Teach" feature of the WQB 3000 provides a quick and easy method of finding the parameters of the process cycle, without the need of in depth operator knowledge.

Component Removal

- Necessary for successful re-flow of the solder joints is the ability to preheat the circuit board and a temperature/time controlled process.
- A vacuum actuated lift to automatically remove the component from the board with minimum force at the end of the re-flow cycle to ensure no damage to the solder pads.

Cleaning of the circuit board

- Residual solder should be removed from the board with a desoldering iron or desolder wick.
- · Residual contaminants should be removed with a suitable solvent spray.

Solder Application.

Stencil printing should be used to apply fresh solder to the pads; this ensures
that the correct volume of solder paste is deposited.

Positioning of the component

- A precise positioning system is required to place components with hidden joints,
 Weller offers two distinct systems.
- WQB 3000 uses the patented Weller template positioning process, a low cost but precise operation.
- A wide range of templates, for BGA, QFP and PLCC components are available
- WQB 3000 OPS uses a computer aided camera placement system, which is
 particularly useful if it is necessary to place a wide range of components.

Soldering of the component

- Re-flow of the replaced component is a repeat of the removal process except the vacuum lift is not initiated at the end of the profile.
- To cater for the many body sizes of BGA devices, a wide range of hot gas nozzles are available.
- To solder QFP and PLCC packages, an adapter is available to permit the use of the Weller NQ/ND family of hot gas nozzles.

Inspection of the solder joint

 Once the rework process has been verified by inspection of the completed repair, and then the repeatable profile controlled by the stored program can be applied ensuring that all subsequent repairs are carried out to the same parameters reducing the necessity of inspection to a minimum.

Repair/Rework BGA/QFP Stations

The new WQB Repair System upgrades the Weller product range in the SMD repair tool sector. A well thought-out design concept combines reliability and maximum process control with ease of use and technically mature detail solutions. Useful accessories increase the possible uses of this repair work station.

On the WQB 3000 the temperature-regulated 2-zone infrared bottom heater provides rapid warm up and homogeneous substrate temperatures. The hot gas top heater, with digital control electronics for temperature monitoring and regulation of the air flow rate, facilitates the finely metered supply of heat to the components.

A temperature sensor placed directly in the hot gas nozzle efficiently regulates the top heater and thus provides maximum process control.

Large chip removal station with high energy handpiece. Extensive assortment of economically priced nozzles, with custom sizes made to order.

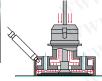

Description

WQB4000SOPS

Weller's next-generation repair and rework station combines a completely new design with state-of-the-art split optic camera technology to provide users with absolute reliability, optimum process control and enhanced ease

- Advanced design for enhanced precision The WQB4000SOPS is modularly built with a slide platform, advanced patented systems and materials of the highest quality to guarantee industrial reliability and long-lasting durability.
- Heating from above: selective and sensitive
 The hot gas heater with patented nozzle system, coupled with digital control electronics for temperature monitoring and regulation of the air flow rate, facilitates the finely metered supply of heat to the components. A temperature sensor placed directly in the hot gas nozzle prevents thermal overload of the component and efficiently regulates the top heater, providing maximum process control.
- Heating from below: rapid and homogeneous The temperature-regulated two-zone infrared bottom heater provides rapid, yet precisely controlled warm-up at homogeneous substrate temperatures.
- Streamlined technology
 The new WQB4000SOPS enables users to work with a standard PC via a USB 2.0 port. Additional appliances or interface cards are not required.
- Monitoring software: comprehensive functions The monitoring software determines temperature profiles and facilitates definition of the optimal soldering process.
- Teach-in feature: fast, effective parameter identification Repeatable results can only be achieved by a process cycle that considers all the parameters of the repair operation. The 'Teach-in' feature provides a quick and easy method of determining process cycle parameters and identifying critical points - without the need for in-depth operator knowledge. The software includes a library of soldering profiles, i.e. general and specific parameters enabling repeatable use. New profiles can be edited easily by the user and
- added to the library.

 Perfect component/circuit board alignment

 With the split optic camera, live images of a component and a circuit board can be aligned independently of each other using the y and theta axis fine adjustment drives. Component size & theta axis
- 2. Align y axis 3. Align x axis
- . Component aligned!
- Removal (desoldering) of the defective component

 The ability to preheat the circuit board and a temperature/time controlled process are critical for good reflow of the solder joints. At the end of the reflow cycle, to avoid damage to the solder pads, a vacuum lift automatically removes the component from the board with minimum force and exact temperature control.
- Cleaning of the circuit board Residual solder should be removed from the board with a
- desoldering iron or desolder wick. Residual contaminants can be removed with a suitable solvent spray.

 Positioning of the new component
 The new WQB4000SOPS station's split optic camera placement system ensures precise positioning of a wide range of components from BGA to fine pitch SMT.
- Component soldering Reflow of the replaced component is essentially a repeat of the removal process, without the vacuum lift being initiated at the end of the profile. An extensive range of hot gas nozzles and adapters are available to cater for the many body sizes of BGA devices or
- QFP and PLCC packages.

 Temperature profiling An eight-step temperature profile enables soldering and cooling
- that are perfectly tailored to specific requirements.

 Split Optics for perfectly accurate positioning
 The new SOPS (Split Optic Positioning System) with the highresolution 2 Mpix CMOS USB 2.0 camera enables accurate positioning of the components following desoldering. It works with a single camera and two-colour lighting for exact positioning. Superb image quality at high dynamics and very low image noise ensure precise, ergonomic component mounting.
- An ever expanding field of applications
 The new WQB4000SOPS is optimally equipped to take on repair
 and rework in mobile communications, research and general BGA. QFP work. Specifically, with PBGA, CBGS, CCGA, CSP's, Micro BGA, QFN, PLCC, SOP and PGA components.
- 1. Components without direct access to the solder joint
- 2. Leaded components with external solder joints
- 3. A wide variety of special modules.

Fume Extraction

Many work environments today, including soldering, adhesives, welding and laser applications, create particles and gases that can be harmful to the work place and the environment. Most people thought that the move to lead-free soldering would be more nature friendly. In reality lead-free soldering smoke emissions contain more breathable fine dust particles. More and smaller particles are produced due to the higher working temperatures required and because more flux is used in the soldering process.

In many countries legal regulations governing clean air in the work place require that hazardous substances are removed from the air in order to avoid harmful effects on people and machines.

It is important to use the correct safety equipment to remove these hazardous substances. Fine particles are more dangerous to inhale than big particles as they get caught more easily and block the alveoli in the lungs.

To protect the operator it is important to use an extraction system that is able to separate these particles and gases and then re-circulates the cleaned air back into the work place. This saves energy and reduces energy costs.

Weller® Zero-Smog® Systems offer two solutions for fume extraction:

Tip Extraction

Weller® FE (Fume Extraction) soldering irons have a smoke tube integrated into the handle. When soldering the tube is positioned directly above the joint and collects any fumes produced. Fume extraction attachments can be retro fitted to non fume extraction Weller® soldering irons.

- · Less investment per work place
- · Collect pollution direct at source
- Up to 20 collection points with one system (200 m apart)
- Ergonomic friendly with easy access to work place
- No noise
- · Minimal air movement

Tip Extraction

Volume Extraction

More suitable for applications involving, for example, solder baths, hot air soldering, micro solders and gluing work. Weller® offers various mobile systems that purify the air at up to a maximum of 8 workplaces.

- Larger areas can be covered
- Low maintenance
- Mobile
- · Quick & easy installation
- · Economic for 1 to 8 work places
- · Remote control

Volume Extraction

37

Filter Technology

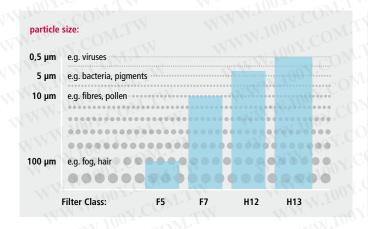

Weller® Zero-Smog® Systems are specifically designed for continuous operation in industrial environments. Care and attention at the design stage plus careful component choice and a high quality manufacturing process have given Weller® extraction systems a world wide reputation for reliability and longevity.

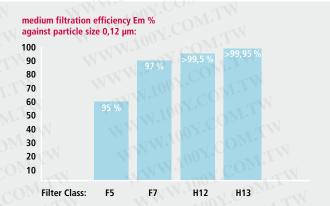

Weller® Zero-Smog® Systems have a **three stage filter system** for removing small particles, fumes and gases that are produced in different working processes:

- The hazardous substances are efficiently captured by the nozzle and are absorbed into the filter.
- Bigger particles get caught in the prefilter and smaller particles get caught in the HEPA (High Efficiency Particulate Air) filter.
- 3. The Wide Band Gas Filter removes fumes and adhesives.

End product – clean air – is re-circulated into the workplace.

Filter Class	Recommended Application
F.5	for standard applications
FOM.T	for applications with high flux content
H12 / H13	filter for clean rooms 1000 – 100

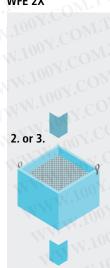

Filter Class F5, F7: Fine dust filter as per EN 779 Filter Class H12/H13: According EN 1822 HEPA (High Efficiency Particulate Air) Filter

Filter Process

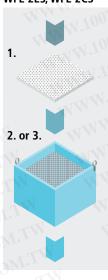

WFE, WFE P

WFE 20D, WFE 2S, WFE 4S, WFE 8S, WFE 2ES, WFE 2CS

1. Fine dust filter

For standard applications with a small amount of flux and pollution gases with high solid content, Weller® offers filter classes F5 or F7.

2. Compact filter consisting of: HEPA filter

Filters particles up to 0.3 μ m. Weller offers HEPA (High Efficiency Particulate Air) filters of class **H12** and **H13**, medium filtration efficiency 99.5% / 99.95%.

Wide band gas filter

For cleaning harmful fumes and vapours. The Weller wide band gas filter consists of 50% active carbon and 50% Puratex. Harmful gases with a high molecular weight are cleaned by the active carbon. Puratex is suitable for absorbing gases of lower molecular weight. Because of its composition, Puratex is able to convert a large number of chemical pollutants by means of molecular modification into non-polluting gases.

3. Gas filter (option)

The gas filter is used for extracting adhesive fumes and solvents. Experience has shown that filtering suspended particles is not so vital in this respect. The gas filter is filled with 50% active carbon and 50% Puratex. The HEPA H12 and H13 is omitted.

Solder Fume Extracting Unit

ESD safe

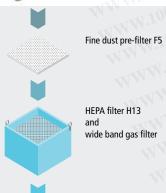

low sound level

Description	Material No.	Shelf Pack	
WFEP2 The Weller® WFE P2 is a line voltage fume extraction unit designed to run with one or two FE (Fume Extraction) soldering irons. The WFE P2 has an electric, long-life, soundproofed vacuum pump to produce the required vacuum it does not need a compressed air supply. The vacuum pump has two power settings which can be selected by means of rocker switches depending on the number of FE soldering irons connected to the unit. This saves energy. The motor is maintenance-free and has a thermal over load to protect the unit.	T0053624599	1	
The filter lift system allows fast and convenient main filter replacement. FE soldering irons are connected directly to unit - additional leads are not required. • Up to 2 FE soldering irons can be connected			
Electric vacuum pump to produce the required vacuum 2 power stages for higher extraction			
performance with 2 FE soldering irons Portable unit for stand alone applications.			
Scope of supply includes: • WFE P Fume extraction unit			
Compact filter Consists of: HEPA filter H13, wide band gas filter (50% active carbon, 50% Puratex)			
Fine dust filter F7			
Technical Data:			
Maximum capacity 2 FE soldering irons Sound level <45 db (A) at 1m distance Operating voltage 230V/50Hz			
Power input 70W Maximum vacuum 30.000 Pa			
Height 295mm (11.6in) Diameter 140mm (5.5in)			

Weller® WFE20D

WFE20D

Solder fume extraction unit with built-in turbine for up to 20FE soldering irons Consists of:

Extraction Unit

Weight 4kg/8.8lb

- Fine Dust filter F7
- Compact filter
- · Wide Band Gas filter (50% Active Carbon, 50% Puratex)
- . ROHS & WEEE compliant

WFE 20D Mobile Fume Extraction Unit
The WFE 20D has been designed for fume extraction direct from the soldering tip. Up to 5 Weller FE soldering rions can be connected directly. The capacity is 20 FE soldering irons with the optional DN 40 tubing system. The powerful maintenance free electronically controlled turbine provides a maximum vacuum of 12.000 Pa. The microprocessor also ensures detection of operating hours and the status of filter absorbency. The three-stage filter system is suitable for use with soldering fumes. The filter system consists of a fine particulate air filter F5 and a combined submicron particulate air filter H13 plus wide band gas filter (50 % AKF, 50 % Puratex).

It removes 99,95 % of contaminants up to 0,12 μm according to EN 1822. Characteristics:

Two operating modes:
 Mode 0: Vacuum regulated to 12.000 Pa

Mode 1: Extraction performance can be set between 20% - 100% with the control buttons.

• Electronic filter check (LED) through differential pressure measurement. If the specified degree

of contamination is exceeded, the unit switches off.

• Electronic filter operation status display. For better management of filter change intervals - the filter operating hours can be pre-specified. The need for filter change is indicated in good time allowing adequate time for filter procurement and replacement. Interface RS 232 for remote

monitoring or remote control.

Remote control available as accessory.

Attributes:

- Up to 40 FE soldering irons can be connected
 Electric driven, maintenance free turbine produces the required vacuum
 4 wheels to allow easy movement of the unit
- Mobile unit for central and stand alone applications
 Central installation for pipe systems up to 200 m (7874 in)

Technical Data:
Maximum capacity 40 FE soldering irons
Sound level <51 db (A) at 1m distance
Operating voltage 230V/50Hz 120V/60Hz

Hower input 630VA

Maximum vacuum 12.000 Pa

Max. delivery rate 100 m³/h

Dimensions (L x W x H) 450 x 450 x 695 mm, 17.7 x 17.7 x 27.3 in Weight 45kg/99lb

Weller® WFE2X

low sound level

HEPA filter H13 and

wide band gas filter

WFE2X

Description

Mobile fume extraction unit purifies air up to two workplaces.

The WFE2X is a fume extraction unit and is suitable for applications with a high demand for gas and particle filtration, e.g. soldering, adhesives, clean room work and laser. It can be placed on a trolley and be moved easily between different work places. Variable speed and the alarm function for filter exchange can be set via the remote control. For applications which produce a large quantity of particles, e.g. lead-free soldering, an external pre-filter can be fitted to increase the lifetime of the main filter. To make installation easier, the WFE2X can be suspended under the work table with special fittings. An RS 232 interface makes it possible to integrate the software with other process equipment.

Technical Data:

Maximum capacity 2 work pices Maximum extraction rate 140 m³/h Sound level <52 db (A) at 1m distance Operating voltage 100-240V/50/60Hz Power input 100W Maximum vacuum 2.300 Pa Dimensions (L x W x H) 210 x 460 x 660 mm 8.3 x 18.1 x 26 in Weight 15kg/33lb

WFE2X KIT 1

Mobile fume extraction kit Includes:

- 2X Fume extraction unit 100-240V / 50/60Hz
- KIT 1 WF60 Sloped stativ extraction arm for volume extraction consists of: Stativ extraction arm Funnel nozzle Stop valve Bench mounting bracket

Weller® WFE2S

low sound level

Fine dust pre-filter HEPA filter H13 wide band gas filter

Description

WFE2S

The fume extraction unit WFE2S is easy to install and operate. It is designed as a smaller, central system and is supplied complete with flexible hose, arm and bracket, ready for installation at the workplace. A powerful, maintenance-free pump provides continuous fume extraction at a maximum air extraction rate of 230m³/h. A built-in microprocessor controls the adjustable pump speed avoiding unnecessary waste of suction power and saving energy. To optimize the degree of pollutant separation, the WFE2S can be modified with filters for different applications. Technical Data:

Maximum capacity 2 work places Maximum extraction rate 230 m³/h Sound level 48 db (A) at 1m distance Standard connection pipe system 50 Operating voltage 120/230V / 50/60Hz Power input 275VA Maximum vacuum 2.700 Pa Dimensions (L x W x H) 320 x 320 x 395 mm 12.6 x 12.6 x 15.5 in Weight 19kg / 41.8lb

Fine main air filter (10 pack)

Main filter cartridge consists of:

 Submicron pariculate air filter (H13) Wide band gas filter (50% active carbon, 50% Puratex)

WFE4S
The Weller WFE4S fume extraction unit Ine weller WH-45 tume extraction unit provides volume extraction capability for up to 6 work places. A powerful maintenance free variable speed motor provides an airflow rate of 615m3/h at max speed. A built-in microprocessor controls the adjustable speed of the turbine. The airflow rate is continuously displayed folistably. The

displayed digitally. The microprocessor also ensures detection of operating hours and the level status of filter absorbency. The three-stage filter is fitted as standard and is easy to replace, consisting of a fine particulate air filter and combined submicron particulate air filter + wide band gas filter. The WFE 4S centralized system is supplied complete with one pipe connector (three optional) and is easily connected to the pipe system. A wide range of pipe accessories including arms with conical nozzle, flat nozzle small vent, extraction hood and tray provide for maximum flexibility.

PDMS & WEEE compliant

H13 + Wide Band Gas Filter (50% Active Carbon, 50% Puratex)

Adhesive Fumes Filter + Wide Band Gas Filter (50% Active Carbon, 50% Puratex)

Pre-Inter DOX

The pre-filter is recommended for use with solder bath, automatic soldering, laser or other major dust emitting applications. It acts as a first stage in the filter process increasing the lifetime of the main filter units. The pre-filter can be fixed directly to the top of the WFE4S or in conjunction with the WFE2S and WFE2X as an external part of the fume extraction system.
