RAFIX
22 QR

General data

RAFIX 22QR control component range
• For a mounting hole diameter of 22.3 mm to IEC 60947
• 250V/10A max.
• Water-jet proof IP65
• 2 collar shapes
• The lamps of the pushbuttons can also be replaced from the front
• The contact blocks (silver or gold contacts) snap onto the actuators with a coupling
• Screw terminals, cage clamp terminals or RJ12 connector
• 3 NC + 3 NO max.
The specified data apply only if actuators/signal indicators are combined with contact blocks and lamp sockets within the same product range.

Control components

Contact blocks marked with different colours for ease of identification in stock and when connecting.

• NC contacts: red
• NO contacts: green
• NC/NO contacts: red/green
• Lamp socket: black
• Silver contacts:
  basic housing colour is black
• Gold contacts:
  basic housing colour is grey
• The terminals associated with a contact pair are colour coded on the connection side and marked with the respective contact numbers.

The lamps of pushbuttons and signal lamps can be replaced from the front. This method saves time and increases safety since it eliminates the need for accessing the machine/control station interior and handling live cables for lamp replacement. After unscrewing the front ring, the lens can be removed and the lamp replaced.
The components feature a removable locating lug. If installed without locating lug, the ring nut with claw can
be used. Accurate alignment of the actuator can be achieved behind the front panel. The cast-on collar seal can not get lost nor be twisted during installation and allows single-person assembly: the actuator is held in the mounting hole by the cast-on seal and can then be fixed by screwing from the rear.

cast-on collar seal

First, snap the lamp socket and contact blocks into the coupling. Then snap the assembly on to the actuator. To release it, the bayonet must be pressed (prevents inadvertent releasing at the same time).

Terminals

Screw terminals, cage clamp or RJ 12
The RAFIX 22 QR contact blocks are available in three different connection styles as required for your application:

Screw terminals
The terminals are open and the captive screws are mounted in the terminal recess.

Cage clamp terminals
Simply insert a screwdriver to open the terminal, insert the cable and remove the screwdriver to close the terminal.

RJ 12-terminal
Just plug in the cable with a RJ 12 connector. Details see page 25.

Your advantage:

This offers your savings in three ways:
• Drastically reduced assembly time thanks to wire insertion from the rear, i.e. no more bending and lateral insertion of the wires required.
• You save material: No wire end sleeves are required.
• You save the time previously required for mounting the wire end sleeves.

Sealed for life against humidity and dirt

The special seal reliably prevents moisture, oil and dust from penetrating to the contact block. In contrast to other sealing types which move up and down the shaft, this special seal is firmly seated on the housing (degree of protection IP 65 to DIN).

Assembly

Screw terminals	Cage clamp terminals

Insert the wire.
Open the terminal.
Tighten the screw.
Insert the wire.

Done.

Remove the screwdriver.

Versatility of design for customized panels

The RAFIX 22 QR system does not only have a particularly low profile and is also available in many different versions. Your design options for your customized panels are nearly unlimited thanks to the interchangeable front rings and lenses. In this way you can achieve an attractive design while ensuring safe operation of your equipment at the same time.
RAFIX 22 QR components are available either with a round or with a square collar.

Control Components

The RAFIX 22 QR control component range meets all the technical requirements and current standards for control units. The system is of modular design. Actuators, contact blocks and lamp sockets can be combined freely. This means that you may implement modifications of design or configuration even at the last minute. An additional positive effect is the reduction of stockholding costs.

Sequence of assembly/disassembly at screw terminals and cage clamp terminals

- Fix the actuator in the front panel with the ring nut.
- Snap the individual elements (a maximum three contact blocks or two contact blocks together with a lamp socket) in the coupling. You can install them on any assembling axis.
- Insert the lamp or LED into the lamp socket.

Panel cut-out according to IEC 60947-5-1

All actuators are provided with a locating lug which may be removed using a screwdriver for installation into mounting holes if required.

With a grid spacing of 30 mm horizontally and 50 mm vertically, the collars of the square actuators touch each other. We revommend to use the same grid spacing also for the round collar shapes (IEC 947).

RAFIX 22 QR emergency stop pushbutton, dupe-proof to EN 418

panel cut-out acc. to IEC 60947-5-1
2

General data

The emergency stop pushbuttons comply with IEC 60 204, IEC 60 073, IEC 60 947 and VDE 0113 Part 1.

They are designed dupe-proof according to EN 418 with a positive mechanical movement sequence. A certain operating force must be exerted at the action point in order to prevent inadvertent operation.

The pushbutton latches when pressed and is reset by either turning the actuator in a clockwise direction or pulling the actuator back to the original position. The reset means depends on the model.

The special shape of the actuator prevents the emergency stop pushbutton from being blocked. This means that the emergency stop process - once initiated - cannot be impeded by any jamming objects.

Only use contact block 1.20.126.4xx.

Contact arrangement example (1 NO = 1 normally open contact, 1 NC = 1 normally closed contact)
1 NO, 1 NC = **Two separate contact blocks** are mounted on the coupling: One with a normally open contact and one with a normally closed contact
1 NC + 1 NO = **One contact block with double contacts** (1 normally closed and 1 normally open) is mounted on the coupling.

BA 9s (MBC/MCC) = Lamp socket snaps onto coupling centre.
