PRODUCT DESCRIPTION

The EM32-1B-LED is a $3\frac{1}{2}$ digit LED voltmeter which is designed to be panel mounted in most low and medium volume applications. The meter features 8mm digit height, 3 decimal points, auto-polarity, auto-zero, 200mV full scale reading and a low current consumption. This product is designed so no soldering is required. Connection is via screw terminals, and options are selected via jumper links. The module features a round metal bezel, requiring a 32.5mm (1.28") diameter cut-out. It is secured with the nut provided. Protection from the front to IP 67 / NEMA 4X standards is achieved by placing the rubber seal between the module and panel during assembly.

SAFETY

To comply with the Low Voltage Directive (LVD 93/68/EEC), input voltages to the module's pins must not exceed 60Vdc. The user must ensure that the incorporation of the panel meter into the user's equipment conforms to the relevant sections of BS EN 61010 (Safety Requirements for Electrical Equipment for Measuring, Control and Laboratory Use).

SCREW TERMINAL FUNCTIONS

- 0V Negative power supply to the meter.
- V+ Positive power supply to the meter (+5V nom).
- IHI Positive measuring input.
 - IHI must be no closer than 1.5V to either the positive or the internal negative supply.
- ILO Negative measuring input.
 - ILO must be no closer than 1.5V to either the positive or the internal negative supply.

Note:

Internal negative supply. This is generated from the supply voltage between V+ and 0V, and is negative with respect to 0V.

For example: if V + = +5V (with respect to 0V), then the allowable common mode input range is from (V + -1.5V) to (V - +1.5V) or from 3.5V to -3.5V with respect to the 0V power supply connection.

JUMPER LINKS

- J1 Connects ILO to COM, when jumper link is fitted.
- J2 Connects ILO to 0V, when jumper link is fitted.

SCALING

Two resistors Ra and Rb may be used to alter the full scale reading (FSR) of the meter - see table. The meter will have to be recalibrated by adjusting the calibration potentiometer on the rear of the module.

APPLICATIONS

Do not connect more than one meter to the same power supply if the meters cannot use the same signal ground. Taking any input beyond the power supply rails will damage the meter.

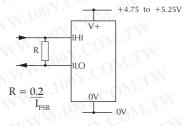

Measuring an input voltage referenced to a floating supply, i.e. the input voltage and the meter's power supply are isolated from each other. Ensure Jumper link J1 is fitted. Ensure Jumper link J2 is not fitted.

Measuring a single ended input voltage referenced to supply, i.e. the input voltage and the meter's power supply share the same 0V rail. Ensure Jumper link J1 is not fitted. Ensure Jumper link J2 is fitted.

Measuring current. The meter's supply is isolated from the current being measured. Ensure Jumper link J1 is fitted. Ensure Jumper link J2 is not fitted.
