

1/4" ROTARY ratchet.
With extra offset action!

The perfect tool when space is a problem.

At heating and cooling systems, servomotors and exhaust systems. Also auto gearboxes.

Rotating the grip enables the stop to be pre-stressed on one side. Just a few millimetres are sufficient for loosening and tightening. Screwing in "idle" occurs through rotation of the grip. Fine tooth drive (52 teeth) with reverse function. Unlocking mechanism: Releases the sockets at the press of a button.

NO 23 082 ROTARY ratchet 1/4"
