

## General

The 3G3JV is a miniature high-efficiency frequency inverter with an excellent price- performance relationship.

The generous dimensions of the power section ensure a high starting torque and low susceptibility to overload which increases machine reliability.

Its many programmable inputs and outputs, an integrated potentiometer for speed control and various monitor functions provide the inverter with high versatility and flexibility. The multifunction inputs can be set to either PNP or NPN. The analog inputs can be 0..10 V, 4..20 mA or 0..20 mA.

### Features

- exceptionally compact design
- integrated reference value potentiometer
- modbus interface, optional
- 8 fixed frequencies
- 4 multifunction digital inputs
- 1 multifunction digital output
- 1 multifunction analog output
- Approval: CE, UL, CSA

## System architecture

To comply with relevant EMC guidelines it is imperative for frequency inverters to be operated with line filters.
