

Lithium Batteries

New size lithium batteries

SANYO has developed brand new lithium batteries specifically designed for digital cameras.

- ❖ High voltage and high capacity. One CR-V3 has the same voltage as two alkaline batteries (3V) and lasts 7 times longer* (continuous use: approx. 140 minutes).
* When used at room temperature (23°C) with 3 W discharge. At 0°C it lasts 50 times longer (continuous use: approx. 110 minutes).
- ❖ Excellent low-temperature characteristics. Usable in a -40°C to 60°C temperature range.
- ❖ Lightweight (38 g) design. Approx. 20% lighter than alkaline batteries.
- ❖ Also interchangeable with nickel-metal hydride batteries.
Note: The CR-V3 should only be used for equipment that accepts its use.

CR-V3-1BP

- Drawing on SANYO's advanced technologies, these lithium photo batteries deliver high voltages and a greater energy density. An exceptionally long life and stable characteristics ensure that your perfect shot is never lost due to weak batteries.
- The lower internal resistance of these batteries considerably improves discharge capabilities, resulting in impressive low-temperature characteristics.
