

# DAC0800/DAC0802

## 8-Bit Digital-to-Analog Converters

### General Description

The DAC0800 series are monolithic 8-bit high-speed current-output digital-to-analog converters (DAC) featuring typical settling times of 100 ns. When used as a multiplying DAC, monotonic performance over a 40 to 1 reference current range is possible. The DAC0800 series also features high compliance complementary current outputs to allow differential output voltages of 20 V<sub>p-p</sub> with simple resistor loads as shown in *Figure 1*. The reference-to-full-scale current matching of better than ±1 LSB eliminates the need for full-scale trims in most applications while the nonlinearities of better than ±0.1% over temperature minimizes system error accumulations.

The noise immune inputs of the DAC0800 series will accept TTL levels with the logic threshold pin, V<sub>LC</sub>, grounded. Changing the V<sub>LC</sub> potential will allow direct interface to other logic families. The performance and characteristics of the device are essentially unchanged over the full ±4.5V to ±18V power supply range; power dissipation is only 33 mW with ±5V supplies and is independent of the logic input states.

The DAC0800, DAC0802, DAC0800C and DAC0802C are a direct replacement for the DAC-08, DAC-08A, DAC-08C, and DAC-08H, respectively.

### Features

- Fast settling output current: 100 ns
- Full scale error: ±1 LSB
- Nonlinearity over temperature: ±0.1%
- Full scale current drift: ±10 ppm/°C
- High output compliance: -10V to +18V
- Complementary current outputs
- Interface directly with TTL, CMOS, PMOS and others
- 2 quadrant wide range multiplying capability
- Wide power supply range: ±4.5V to ±18V
- Low power consumption: 33 mW at ±5V
- Low cost

### Typical Applications

FIGURE 1. ±20 V<sub>p-p</sub> Output Digital-to-Analog Converter (Note 5)

**Note 2:** Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its specified operating conditions.

**Note 3:** The maximum junction temperature of the DAC0800 and DAC0802 is 125°C. For operating at elevated temperatures, devices in the Dual-In-Line J package must be derated based on a thermal resistance of 100°C/W, junction-to-ambient, 175°C/W for the molded Dual-In-Line N package and 100°C/W for the Small Outline M package.

**Note 4:** Human body model, 100 pF discharged through a 1.5 kΩ resistor.

**Note 5:** Pin-out numbers for the DAC080X represent the Dual-In-Line package. The Small Outline package pin-out differs from the Dual-In-Line package.

DS005686-5

$$I_{FS} \approx \frac{+V_{REF}}{R_{REF}} \times \frac{255}{256}$$

$I_O + \bar{I}_O = I_{FS}$  for all logic states  
 For fixed reference, TTL operation, typical values are:  
 $V_{REF} = 10.000V$   
 $R_{REF} = 5.000k$   
 $R15 = R_{REF}$   
 $C_C = 0.01 \mu F$   
 $V_{LC} = 0V$  (Ground)

FIGURE 3. Basic Positive Reference Operation (Note 5)

DS005686-21

FIGURE 4. Recommended Full Scale Adjustment Circuit (Note 5)

DS005686-16

$$I_{FS} \approx \frac{-V_{REF}}{R_{REF}} \times \frac{255}{256}$$

Note.  $R_{REF}$  sets  $I_{FS}$ ;  $R15$  is for bias current cancellation

FIGURE 5. Basic Negative Reference Operation (Note 5)

FIGURE 8. Symmetrical Offset Binary Operation (Note 5)

DS005686-19

For complementary output (operation as negative logic DAC), connect inverting input of op amp to  $\bar{I}_O$  (pin 2), connect  $I_O$  (pin 4) to ground.

FIGURE 9. Positive Low Impedance Output Operation (Note 5)

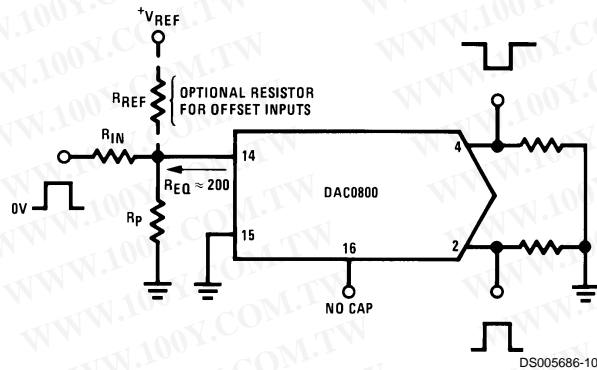

Typical Applications (Continued)

DS005686-20

For complementary output (operation as a negative logic DAC) connect non-inverting input of op am to  $\bar{I}_O$  (pin 2); connect  $I_O$  (pin 4) to ground.

FIGURE 10. Negative Low Impedance Output Operation (Note 5)

Typical values:  $R_{IN}=5k, +V_{IN}=10V$

FIGURE 11. Pulsed Reference Operation (Note 5)

DS005686-9

$V_{TH} = V_{LC} + 1.4V$   
 15V CMOS, HTL, HNIL  
 $V_{TH} = 7.6V$

Note. Do not exceed negative logic input range of DAC.

FIGURE 12. Interfacing with Various Logic Families

DS005686-11

(a)  $I_{REF} \geq \text{peak negative swing of } I_{IN}$

DS005686-12

(b)  $+V_{REF}$  must be above peak positive swing of  $V_{IN}$

FIGURE 13. Accommodating Bipolar References (Note 5)

Typical Applications (Continued)

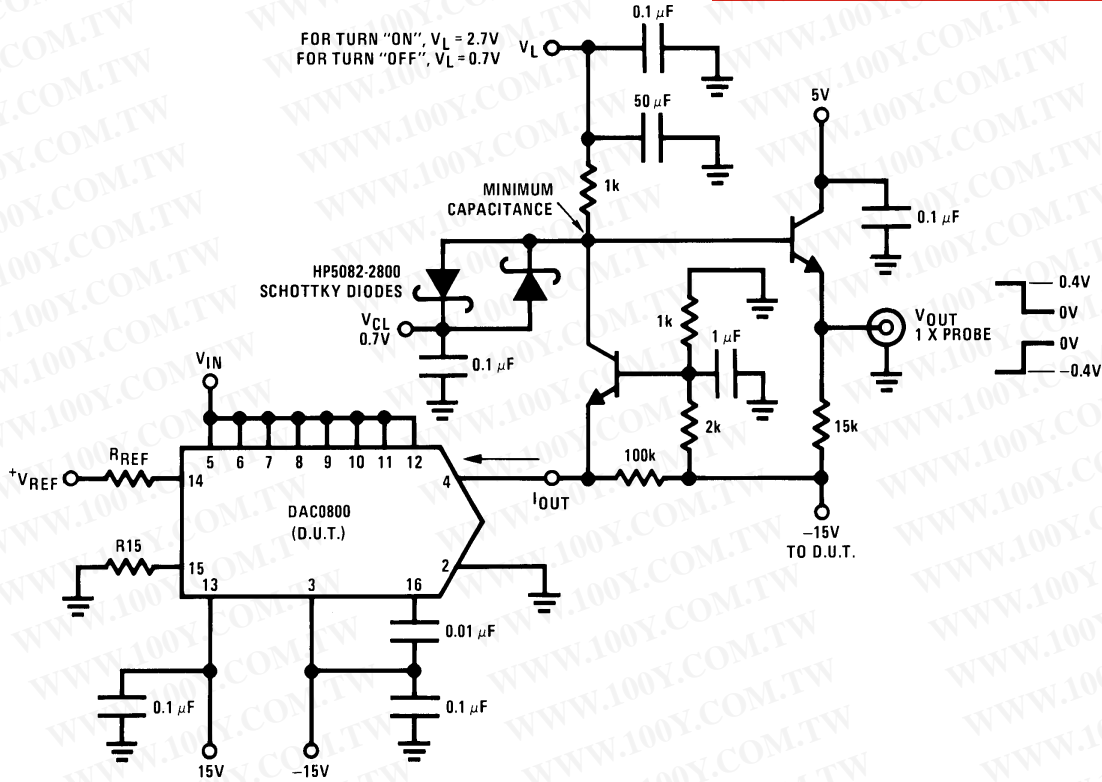

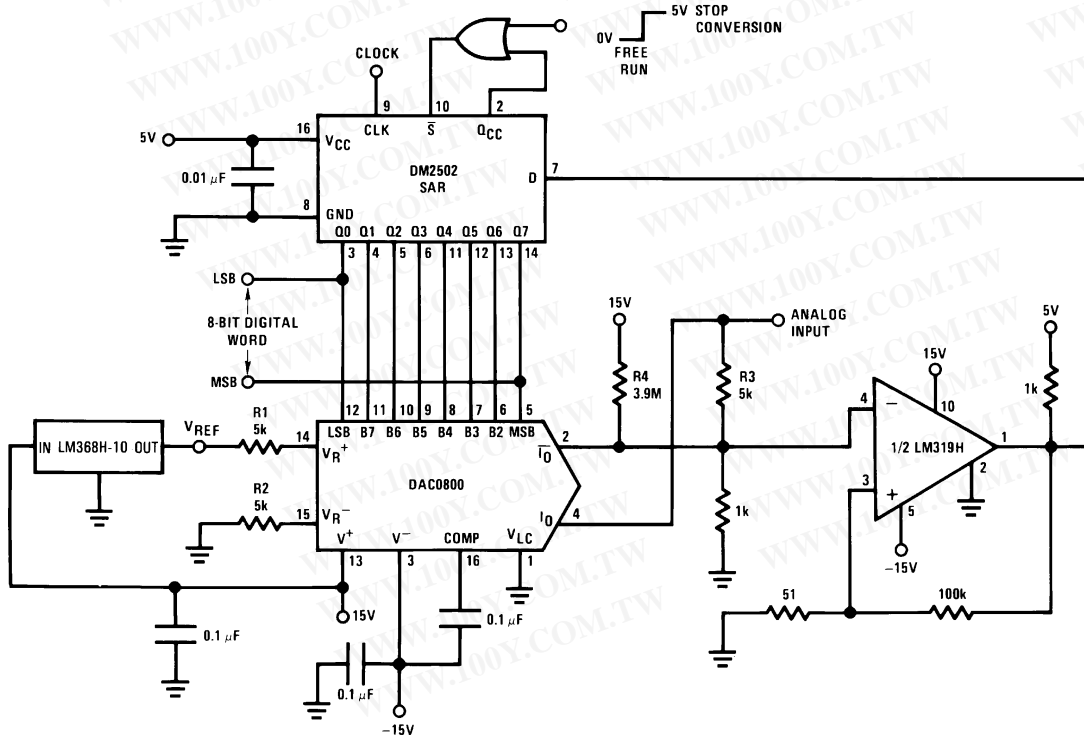

FIGURE 14. Settling Time Measurement (Note 5)

DS005686-7

DS005686-8

Note. For 1 µs conversion time with 8-bit resolution and 7-bit accuracy, an LM361 comparator replaces the LM319 and the reference current is doubled by reducing R1, R2 and R3 to 2.5 kΩ and R4 to 2 MΩ.

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
