August 1986 Revised March 2000

# DM74LS283 4-Bit Binary Adder with Fast Carry

### **General Description**

These full adders perform the addition of two 4-bit binary numbers. The sum  $(\Sigma)$  outputs are provided for each bit and the resultant carry (C4) is obtained from the fourth bit. These adders feature full internal look ahead across all four bits. This provides the system designer with partial lookahead performance at the economy and reduced package count of a ripple-carry implementation.

The adder logic, including the carry, is implemented in its true form meaning that the end-around carry can be accomplished without the need for logic or level inversion.

#### **Features**

- Full-carry look-ahead across the four bits
- Systems achieve partial look-ahead performance with the economy of ripple carry
- Typical add times

Two 8-bit words 25 ns Two 16-bit words 45 ns

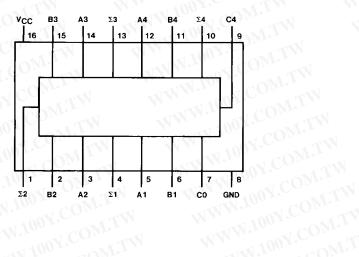

■ Typical power dissipation per 4-bit adder 95 mW

## **Ordering Code:**

Order Number Package Number		Package Description	WW	
DM74LS283M	M16A	16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150 Narrow	1.7	
DM74LS283N	N16E	16-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide	.=11	

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

# WWW.100Y.COM.TW WWW.100Y.COM.TW Absolute Maximum Ratings(Note 1)

7V Supply Voltage Input Voltage 7V Operating Free Air Temperature Range 0°C to +70°C

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

### **Recommended Operating Conditions**

Symbol	Parameter	Min	Nom	Max	Units
V <sub>CC</sub>	Supply Voltage	4.75	5	5.25	V
