# DM74S112 Dual Negative-Edge-Triggered Master-Slave J-K Flip-Flop with Preset, Clear, and Complementary Outputs

### **General Description**

This device contains two independent negative-edge-triggered J-K flip-flops with complementary outputs. The J and K data is processed by the flip-flops on the falling edge of the clock pulse. The clock triggering occurs at a voltage level and is not directly related to the transition time of the negative going edge of the clock pulse. Data on the J and K inputs can be changed while the clock is HIGH or LOW without affecting the outputs as long as setup and hold times are not violated. A low logic level on the preset or clear inputs will set or reset the outputs regardless of the logic levels of the other inputs.

### **Ordering Code:**

Outputs DM74S112 Dual Negative-Edge-Triggered Master-Slave J-K Flip-Flop with Preset, Clear, and Complementary

#### Absolute Maximum Ratings(Note 1)

WWW.100Y.COM.TW

Supply Voltage	7V	
Input Voltage	5.5V	
Operating Free Air Temperature Range	0°C to +70°C	
Storage Temperature Range	-65°C to +150°C	
	Input Voltage Operating Free Air Temperature Range	Input Voltage5.5VOperating Free Air Temperature Range0°C to +70°C

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation. WWW.100
