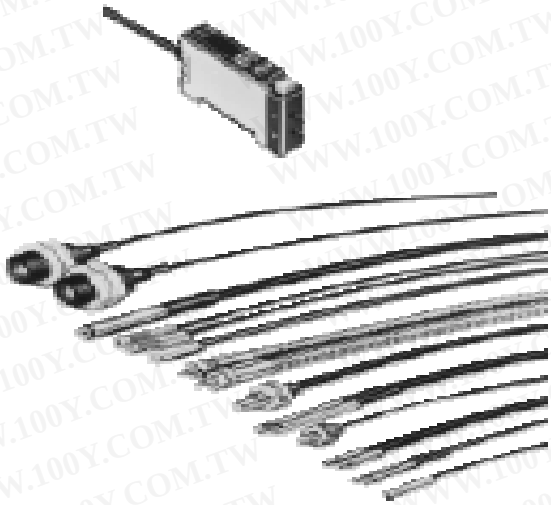
Fiber-Optic Photoelectric Sensor E3X

High Performance Amplifier Has Fast Response Time, Longer Sensing Distance and Self-Diagnostic Functions



- Ultra fast 20 µsec. response time (E3X-F)
- Extended sensing distance (E3X-H)
- User friendly features:
  - 8-turn sensitivity with position indicator
  - IP66 enclosure rating
  - Slim body mounts on DIN rail
- Set-mode blinking light source aids alignment

■ ADJUSTING SENSITIVITY

E3X-H11/-A❑❑/-F❑❑/-VG❑❑

Using a sensing object, set the Sensitivity Adjust so that the indicators operate as described in the following table:

Sensing method		Detection	Light	Indicators
Through-beam		 With sensing object	OFF	 Green: light ON Red: light OFF
		 Without sensing object	ON	 Green: light ON Red: light ON
Reflective	Detection	 With sensing object	ON	 Green: light ON Red: light ON
		 Without sensing object	OFF	 Green: light ON Red: light OFF
	Detection of the difference in color or shade	 Color that has a high reflective ratio	ON	 Green: light ON Red: light ON
		 Color that has a low reflective ratio	OFF	 Green: light ON Red: light OFF
Retroreflective		 With sensing object Reflecting plate	OFF	 Green: light ON Red: light OFF
		 Without sensing object Reflecting plate	ON	 Green: light ON Red: light ON

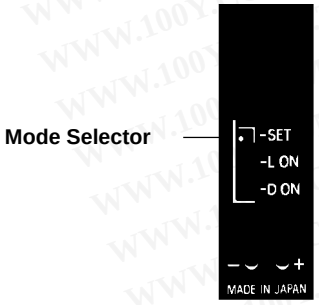
Note: 1. If the indicators operate as described in the table, the E3X can operate in stable condition within the rated temperature range.

2. Even when the green indicator is OFF, the E3X will operate stably if the operating temperature change since the initial settings is within ± 10°C.

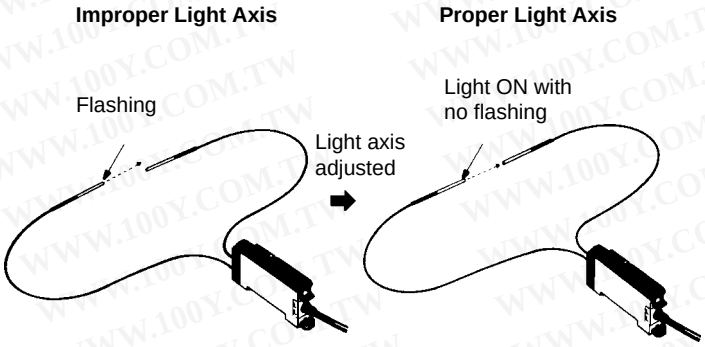
■ LIGHT AXIS ADJUSTMENT WITH FLASHING FUNCTION

E3X-A□□/-F□□/-VG□□

1. Set the mode selector to SET.



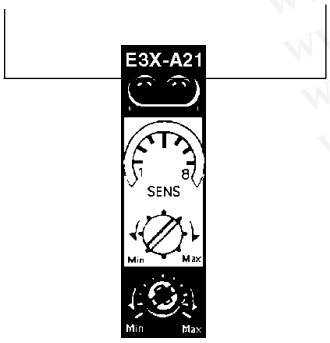
2. Adjust the light axis by moving the fiber with the light flashing.



3. Set the mode selector to L-ON or D-ON after the light axis is adjusted.

■ SELF-DIAGNOSTIC FUNCTION

With this function, the E3X checks changes in environment conditions (especially a change in the ambient temperature) and self-diagnoses the resistance against the changes. The result is shown by the indicators or an output signal.

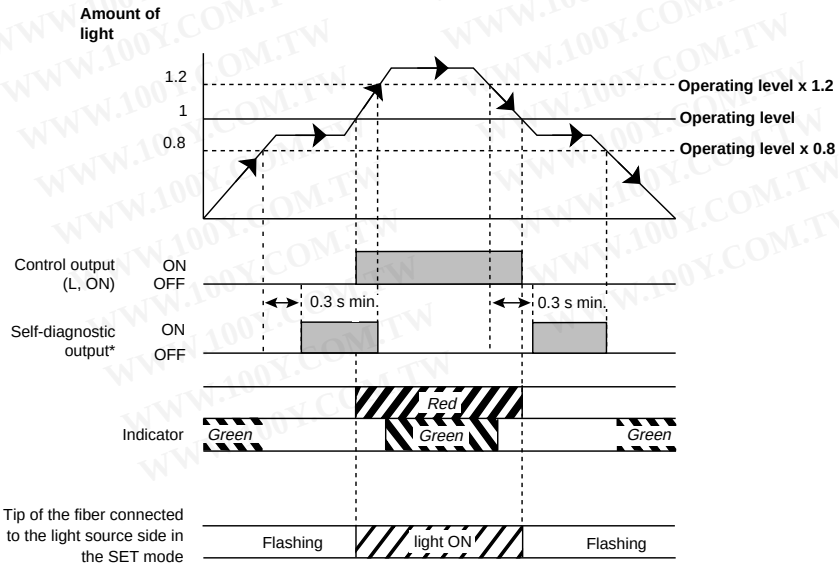


Displays

- **Stable Operation Indicator:** Changes in environmental conditions (changes in the ambient temperature, the operating voltage, or the volume of dust) are checked and the resistance against them are self-diagnosed. The result is shown via the indicator.
- **Light Reception Indicator:** The amount of light received is shown by this indicator.

Output:

- The resistance against changes in environmental conditions is shown by the indicator and the result is output.



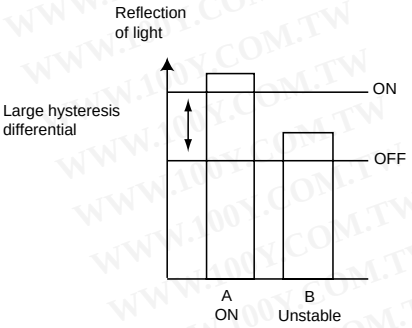
*If the self-diagnostic output is ON when the sensing object is moving at low speed, use the E3X with an ON-delay timer circuit.

■ VARIABLE HYSTERESIS FUNCTION (E3X-H11)

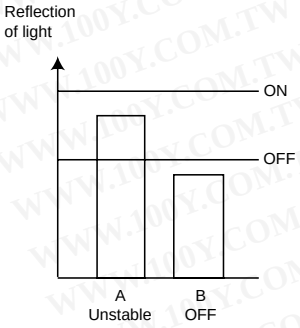
Detection of Plate Level Differences

(If detection is impossible with the hysteresis value set to maximum)

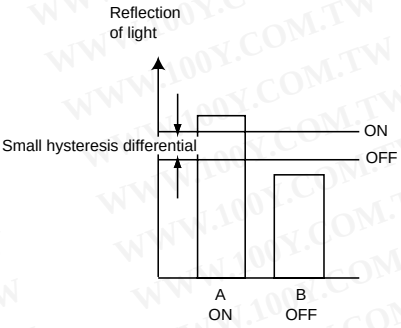
Refer to the following when using the hysteresis adjuster.



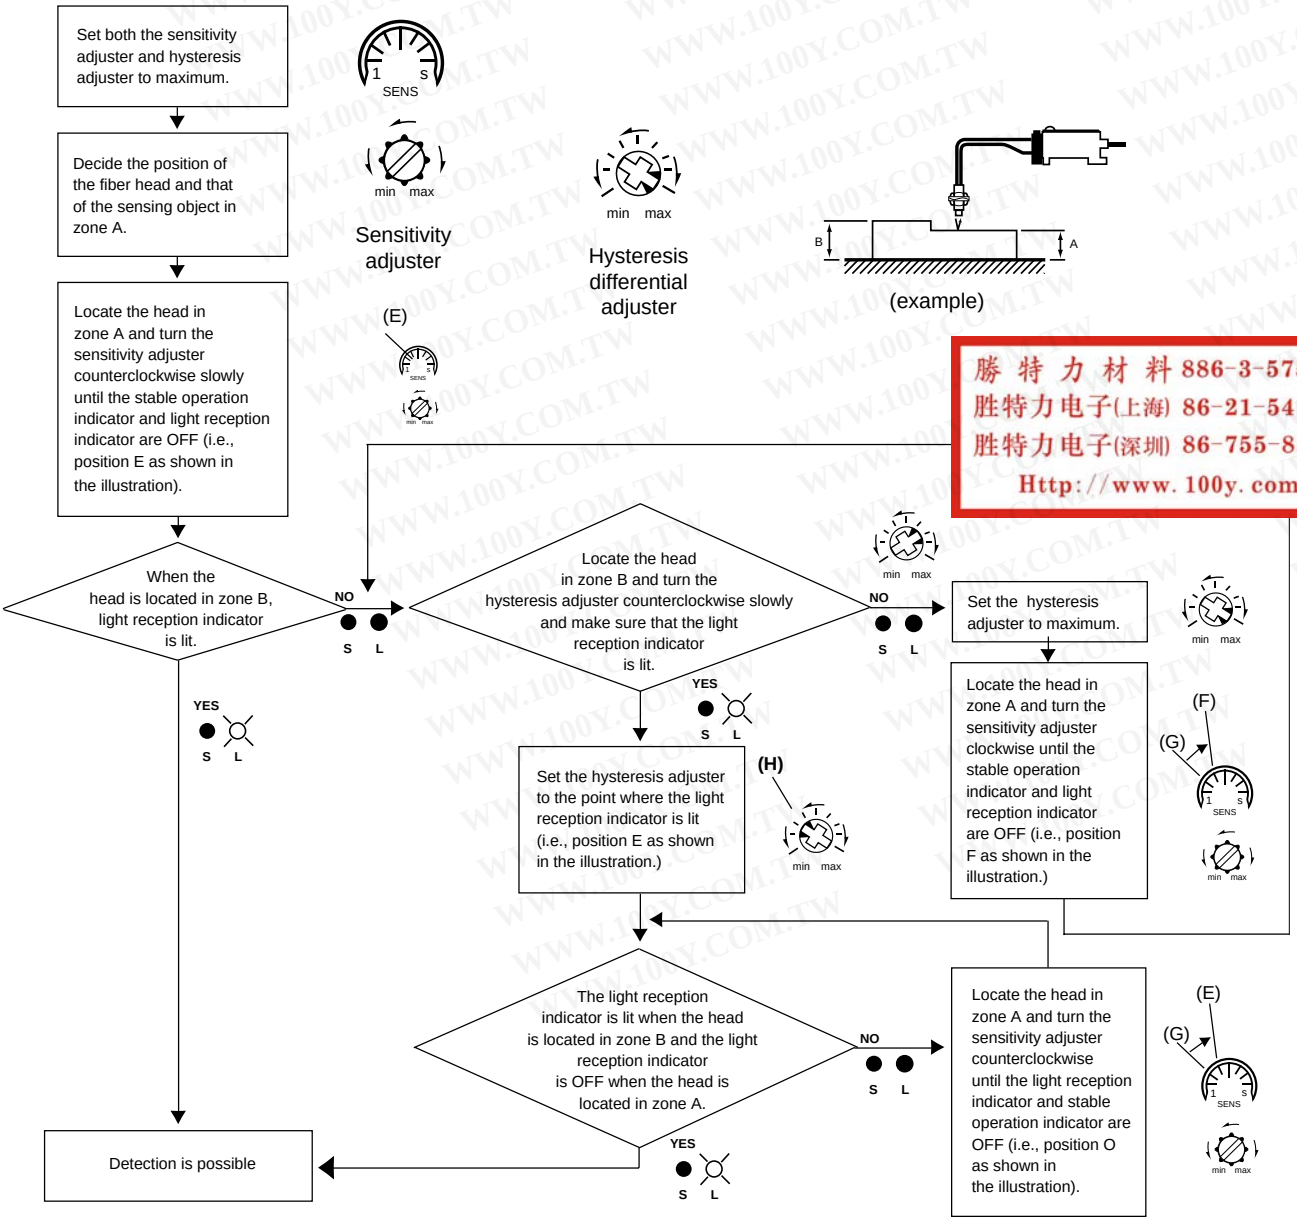
Detecting operation is not stable because zone B is within the hysteresis differential range.



Reduce the sensitivity of the E3X with the sensitivity adjuster and turn off zone B.



Reduce the hysteresis value with the hysteresis adjuster so that zone A will be ON.



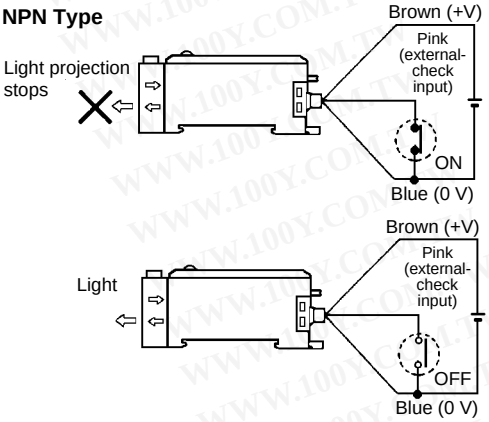
■ EXTERNAL DIAGNOSTIC INPUT FUNCTION

With this function, light projection can be stopped when desired. The operation of the sensor can be checked with this function before the E3X is placed into actual operation.

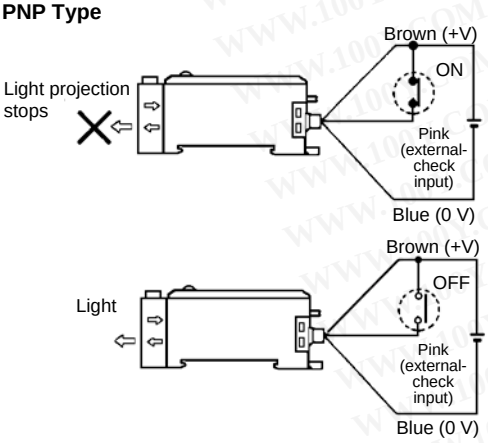
E3X-A❑❑

Light is emitted from the projection fiber head when the self-diagnostic inputs is ON. The sensor, however, will not operate.

NPN Type

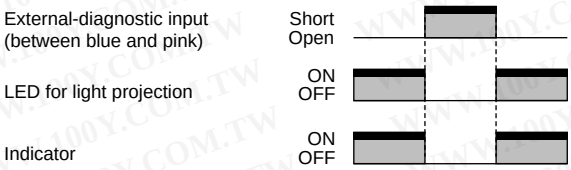


PNP Type

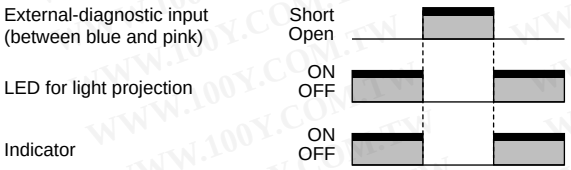


E3X-F❑❑/-VG❑❑

No light is emitted from the projection fiber head when self-diagnostic input is ON.



By short-circuiting the pink and blue cords, light projection can be stopped (with a short-circuit current of 0.2 mA max.).



By short-circuiting the brown and pink cords, light projection can be stopped (with a short-circuit current of 0.2 mA max.).

■ SPECIAL FIBER UNITS

The following special accessories are available (order separately). Contact your OMRON representative for the details.

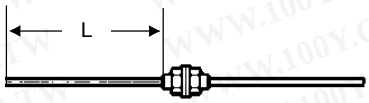
Fiber Units with Special Length of Stainless Steel Tube

Fiber with different lengths of stainless steel tubes are available.

Applicable Models

E32-TC200F (tube with 0.9 dia.)
E32-TC200B/DC200F (tube with 1.2 dia.)
E32-DC200B (tube with 2.5 dia.)

Appearance



The length can be ordered in increments of 10 mm between 10 mm min. and 120 mm max.

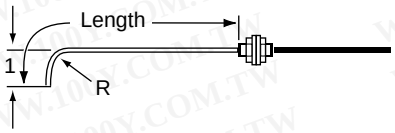
Tolerance: ±1.0 mm if L is 40 mm or less and ±2.0 if L is more than 40 mm. (Note that standard Fiber Units have a 90-mm or 40-mm long stainless steel tube.)

Fiber Units with 90° Bend in Stainless Steel Tube

Applicable Models
E32-TC200B/TC200F/DC200F

Appearance

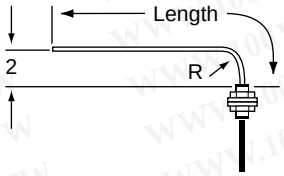
Stainless Steel Tube with a 90 ° Bend at the Tip



Bending radius	*l* 1 (±1)	
R 5.0	10.0 mm	15.0 mm
R 7.5	12.5 mm	17.5 mm
R 10.0	15.0 mm	20.0 mm
R 12.5	17.5 mm	22.5 mm

The length overall is 120 mm max.
Note: If larger ***l*** 1 is required, use the E39-F11 Sleeve Bender.

Stainless Steel Tube with a 90° Bend at the Base



Bending radius	*l* 2 (±1)	
R 5.0	5.0 mm	10.0 mm
R 7.5	7.5 mm	17.5 mm
R 10.0	10.0 mm	20.0 mm
R 12.5	12.5 mm	22.5 mm

The length overall is 120 mm max.
Note: If larger ***l*** 2 is required, use the E39-F11 Sleeve Bender.

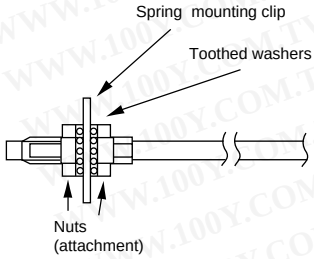
Precautions

■ FIBER UNITS

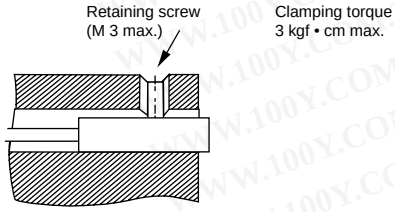
Tightening Force

The tightening force applied to the Fiber Unit should be as follows:

Screw-mounting Model



Column Model



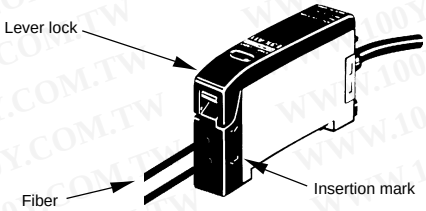
Fiber units	Clamping torque
M3/M4 screw	8 kgf • cm max. (0.78 N • m)
M6 screw	10 kgf • cm max. (0.98 N • m)
2-mm dia. column	3 kgf • cm max. (0.29 N • m)
3-mm dia. column	3 kgf • cm max. (0.29 N • m)
E32-D14L	10 kgf • cm max. (0.98 N • m)
E32-T12F	8 kgf • cm max. (0.78 N • m)
E32-D12F	8 kgf • cm max. (0.78 N • m)
E32-T16	5 kgf • cm max. (0.49 N • m)
E32-R21	6 kgf • cm max. (0.59 N • m)
E32-M21	Up to 5 mm to the tip: 5 kgf • cm max. (0.49 N • m) Up to 5 mm from the tip: 8 kgf • cm max. (0.78 N • m)
E32-L25A	8 kgf • cm max. (0.78 N • m)

Use a proper-sized spanner.

Fiber Connection and Disconnection

The E3X amplifier has a lever lock. Connect or disconnect the fibers to or from the E3X amplifier using the following procedures:

1. Connection



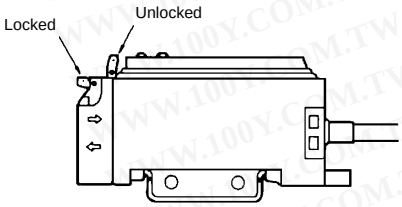
Insert the fibers into the E3X amplifier and press the lever lock until the amplifier clicks to lock the fibers. The fibers will have insertion marks when they are cut with the E39-F4 (Fiber Cutter). The portion from the tips to the insertion mark should be inserted to the E3X.

2. Disconnection

Raise the lock lever to unlock the fibers before pulling them out.

Fiber Insertion

If the portion from the tip to the insertion mark of the fibers are not inserted into the amplifier unit, the sensing distance will be reduced.

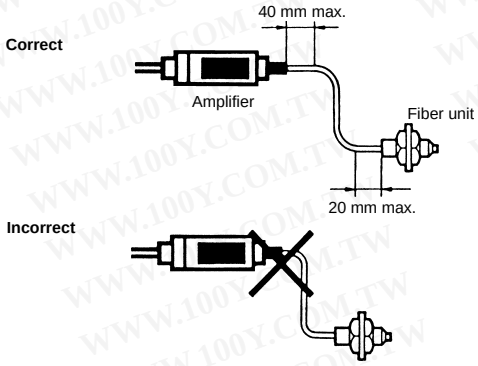


Connection

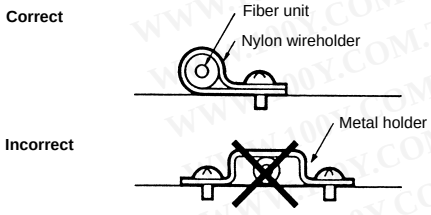
Do not pull or press the Fiber Units. The Fiber Units have a withstand force of 1 kg or 3 kg (pay utmost attention because the fibers are thin).

Do not bend the Fiber Units beyond the permissible bending radius.

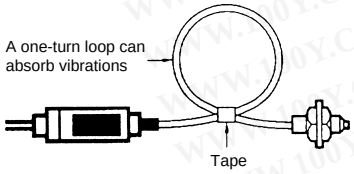
Do not bend the edge of the Fiber Units.



Do not apply excess force on the Fiber Units.



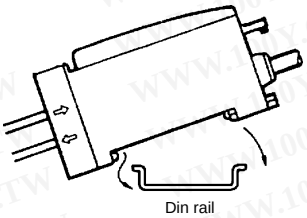
The Fiber Head could be broken by excessive vibration. To prevent this, the following is effective:



■ AMPLIFIER UNITS

Mounting

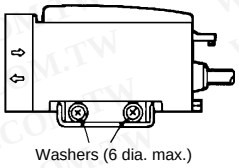
1. Mount the front part on the mounting bracket (sold together) or a DIN rail.
2. Press the back part onto the mounting bracket or the DIN rail.



Removal

By pulling back the lock (yellow) on the bottom with a flat blade screwdriver, the amplifier can be removed with ease.

In the case of side mounting, attach the mounting bracket on the amplifier first, and secure the amplifier with M3 screws and washers. The diameter of the washers should be 6 mm max.

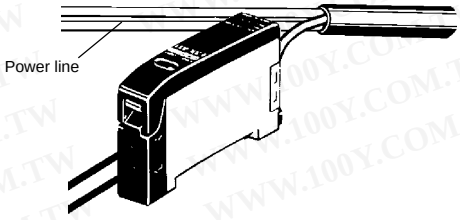


Others

When power is off:
The moment power is turned off, the E3X could output a pulse signal which could affect the operation of the devices connected to it. This will happen more often if power is supplied to the E3X from an external power supply, thus affecting the connected timer and counter. Use a built-in power supply as much as possible to avoid this.

If power is supplied to a photoelectric sensor through a cord that is wired together with other power lines in the same duct, the cord will be influenced by the power lines and malfunctioning of the photoelectric sensor or damage could result. Wire the cord separately or use a sealed cord to supply power to the photoelectric sensor.

If the case of the cord is extended, use a wire with 0.3 mm^2 max.. The total length of the cord should be 100 m max.



Power supply:
If a standard switching regulator is used as a power supply, the frame ground (FG) terminal and the ground (G) terminal must be grounded, or otherwise the E3X can malfunction, influenced by the switching noise of the power supply.

The supplied voltage must be within the rated voltage range. Unregulated full- or half-wave rectifiers must not be used as power supplies.

Do not use a hammer to hit the amplifier when mounting or the amplifier will loose watertightness.
