1

Multifunction Digital Timer

1/16 DIN Timer with Easy-to-Use Functions

- Nine field-selectable output modes accommodate a wide variety of applications
- All parameters set by scrollthrough menus accessed from the front panel
- Field-selectable time ranges from 0.001 second to 9999 hours
- High-visibility alphanumeric LCD display has 8 mm high characters and built-in backlight
- Precision control possible to 0.001 second
- Four levels of key protection provided
- 10-year battery back-up
- Selectable elapsed time (UP) and time remaining (DOWN) display
- Short body model H5CR-S measures just 64 mm (2.52 inches) deep

Operation.

■ NOMENCLATURE

* Key protection indicator and gate indicator are not included in the H5CR-L.

H5CR :

KEY OPERATIONS

KEY OPERATION	STW WWW.1000X.COM.IW WWW.LCOM.IW
Key name	Operation
Increment keys (1-4)	Used to change the corresponding digit of the set value. Used to change data in the set mode.
Display key	Switches to the present value display.
Mode key	Switches from run mode to set mode. Changes items in the set mode.
Reset key	Resets timing and outputs.

■ FACTORY SETTINGS

The following table shows the timer settings when it is shipped. Change the settings as necessary to suit the system before operation. Settings and the display receive power from the internal battery and are, therefore, unaffected by external power interruptions. With the initial settings, there will be no output even if the power supply is connected. External inputs and outputs cannot be used without a power supply.

Key protect level	KP-1	The COMPANY				

■ INPUT/OUTPUT FUNCTIONS

Inputs	Start signal	Stops timing in A-2 and A-3 (power ON-delay) modes. Starts timing in other modes.		
	Reset	Resets present value (to zero in UP mode, to preset in DOWN mode). Control inputs are not accepted while reset input is ON. Reset indicator lit while reset input is ON.		
	Gate	Inhibits timer operation.		
	Key protect	Makes keys inoperative according to key protect level. Key protected indicator lit while key protect input is ON. Effective when protect terminals are shorted. Effective if power supply is turned off.		
Outputs	Control output (OUT) Outputs made according to designated output mode when corresponding preset is reached			

OPERATIONAL OVERVIEW

The flowchart below shows operation common to all H5CR models. Refer to the Setting Item Table for details on the operation of specific modes.

= H5CR

SETTING ITEM TABLE

H5CR :

H5CR

EXAMPLES

Run Mode

Changing the Set Value

To change the set value from 3 hr 5 min to 4 hr 5 min, press the 3 key so that the number 4 appears in the hour's place.

- Pressing keys 1 through 4 increments the corresponding column by 1.
- The columns can be changed in any order, but the output will be turned ON if the set value is less than the present value.
- Nonsignificant zeros are suppressed on the set value display.

勝 特 力 材 料 886-3-5753170 胜特力电子(上海) 86-21-54151736 胜特力电子(深圳) 86-755-83298787 Http://www.100y.com.tw

Setting Mode

Changing Settings in the Set Mode

- 1. Press the MODE key to switch from run mode to set mode.
 - The timer will continue operation according to existing settings when switched from run mode to set mode during operation.
 - The MODE key will be locked if the key protection function is enabled.
 - Settings changed in the set mode do not take effect until run mode is entered. Because the operating conditions will change once this occurs, always use the RESET key or a reset input to reset operation.
- 2. Press the MODE key to scroll successively through the items that can be set.

- Note: Read *Changing Set Values* in the *Precautions* section before changing the timer set value during operation.
- 3. To change the selected item,
- Press the MODE key until the desired item appears.

 Change the item setting by pressing keys 1 through 4. (Press the DISPLAY key to switch back from set mode to run mode.)

H5CR

Precautions.

■ POWER SUPPLIES

- The input circuit is not isolated from the power supply circuit. The internal circuit might be damaged by a surrounding AC circuit, so use an isolated AC power supply with equipment connected to the input circuit.
- If power is interrupted for less than 10 ms, operation will continue normally. If power is interrupted for 10 to 500 ms, operation will be inconsistent, and timing may stop or reset, depending on the mode.
- Connect the power supply voltage through a relay or switch in such a way that the voltage reaches a fixed value immediately.
- Depending on switching frequency, current surges may degrade relay contacts; relays with a capacity greater than 10 A are recommended.

INPUT AND OUTPUT

- Do not use external sources to increase the voltage of input signals (control signal, reset, gate, and key protection).
- Be sure that the load of the control output (contact, transistor) is less than the maximum values indicated in the specifications. If the output load exceeds the recommended value, the life span of the contact output type will be shortened dramatically, and the transistor of the transistor output type will be damaged.
- The transistor output is opto-isolated from the internal circuitry, so either NPN or PNP transistors can be used.

SELF-DIAGNOSTIC FUNCTION

• The following displays will appear if an error occurs. The present value and output enter the same status as after pressing the RESET key.

CHANGING SET VALUES

 The timer set value can be changed while the timer is operating, so a high value can be set temporarily to inactivate the timer, or a low value can be set to activate the timer more quickly. If the set value is changed accidentally during operation, the timed output might be activated. Therefore, turn the key protection input ON unless the set value is being changed.

H5CR

 To avoid changing the output when changing the set value, it is recommended to begin changing the set value by entering a large number in the higher digit.

OPERATING ENVIRONMENT

- When using the timer in an area with much electrical noise, separate the timer, wiring, and the equipment which generates the input signals as far as possible from the noise sources. It is also recommended to shield the input signal wiring to prevent electrical interference.
- Organic solvents (such as paint thinner), as well as very acidic or basic solutions, might damage the outer casing of the timer.

MAXIMUM VOLTAGE TEST

 When the timer is installed in a control box and tests are conducted which may damage the timer's internal circuitry (for example, a test measuring the maximum voltage difference between the control circuit and metal components), remove the timer from the control box or short circuit the terminals.

CAUTION

This product contains a lithium battery. Lithium batteries explode if incinerated. Dispose of the digital timer as a combustible item.

Display	Error	Output status	Correction	Set
