# P8748H／P8749H <br> 8048AH／8035AHL／8049AH／8039AHL／8050AH／8040AHL HMOS SINGLE－COMPONENT 8－BIT MICROCONTROLLER 

－High Performance HMOS II
－Interval Time／Event Counter
－Two Single Level Interrupts
－Single 5－Volt Supply

## －Programmable ROMs Using 21V <br> －Easily Expandable Memory and I／O <br> －Up to $1.36 \mu \mathrm{~s}$ Instruction Cycle All Instructions 1 or 2 Cycles

－Over 96 Instructions；90\％Single Byte
The Intel MCS ${ }^{0}-48$ family are totally self－sufficient，8－bit parallel computers fabricated on single silicon chips using Intel＇s advanced N －channel silicon gate HMOS process．
The family contains 27 I／O lines，an B－bit timer／counter，and on－board oscillator／clock circuits．For systems that require extra capability，the family can be expanded using MCS ${ }^{\oplus}-80 /$ MCS ${ }^{\oplus}-85$ peripherals．
These microcontrollers are available in both masked ROM and ROMless versions as well as a new version， The Programmable ROM．The Programmable ROM provides the user with the capability of a masked ROM while providing the flexibility of a device that can be programmed at the time of requirement and to the desired data．Programmable ROM＇s allow the user to lower inventory levels while at the same time decreasing delay times and code risks．

These microcomputers are designed to be efficient controllers as well as arithmetic processors．They have extensive bit handling capability as well as facilities for both binary and BCD arithmetic．Efficient use of tions over 2 bytes in length．

| Device | Internal | Memory | RAM STANDBY |
| :---: | :--- | :---: | :---: |
| 8050 AH | $4 \mathrm{~K} \times 8 \mathrm{ROM}$ | $256 \times 8 \mathrm{RAM}$ | yes |
| 8049 AH | $2 \mathrm{~K} \times 8 \mathrm{ROM}$ | $128 \times 8 \mathrm{RAM}$ | yes |
| 8048 AH | $1 \mathrm{~K} \times 8 \mathrm{ROM}$ | $64 \times 8 \mathrm{RAM}$ | yes |
| 8040 AHL | None | $256 \times 8 \mathrm{RAM}$ | yes |

|  |  | Programming power supply（ +21 V ）． | $\begin{aligned} & \mathrm{P} 8748 \mathrm{H} \\ & \mathrm{P} 8749 \mathrm{H} \\ & \hline \end{aligned}$ |
| $V_{C C}$ | 40 | Main power supply；+5 V during operation and programming． | All |
| PROG | 25 | Output strobe for $8243 \mathrm{I} / \mathrm{O}$ expander． | All |
|  |  | Program pulse（ +18 V ）input pin During Programming． | $\begin{aligned} & \mathrm{P8748H} \\ & \mathrm{P} 8749 \mathrm{H} \end{aligned}$ |
| $\begin{aligned} & \text { P10-P17 } \\ & \text { Port } 1 \end{aligned}$ | 27－34 | 8－bit quasi－bidirectional port． | All |
| $\begin{aligned} & \text { P20-P23 } \\ & \text { P24-P27 } \\ & \text { Port } 2 \end{aligned}$ | $\begin{aligned} & 21-24 \\ & 35-38 \end{aligned}$ | 8－bit quasi－bidirectional port．P20－P23 contain the four high order program counter bits during an external program memory fetch and serve as a 4－bit l／O expander bus for 8243. | All |
| $\begin{aligned} & \text { DBO-DB7 } \\ & \text { BUS } \end{aligned}$ | 12－19 | True bidirectional port which can be written or read synchronously using the $\overline{\mathrm{RD}}, \overline{\mathrm{WR}}$ strobes．The port can also be statically latched． Contains the 8 low order program counter bits during an external program memory fetch，and receives the addressed instruction under the control of $\overline{\text { PSENN }}$ ．Also contains the address and data during an external RAM data store instruction，under control of ALE，$\overline{\text { RD }}$ ，and WR． | All |
| T0 | 1 | Input pin testable using the conditional transfer instruction JTO and JNTO．TO can be designated as a clock output using ENTO CLK instruction． | All |
|  |  | Used during programming． | $\begin{aligned} & \hline \mathrm{P} 8748 \mathrm{H} \\ & \text { P8749H } \end{aligned}$ |

Table 1．Pin Description（Continued）

| Symbol | Pin No． | Function | Device |
| :---: | :---: | :---: | :---: |
| T1 | 39 | Input pin testable using the JT1，and JNT1 instructions．Can be designated the timer／counter input using the STRT CNT instruction． | All |
| INT | 6 | Interrupt input．Initiates an interrupt if interrupt is enabled．Interrupt is disabled after a reset．Also testable with conditional jump instruction． （Active low）interrupt must remain low for at least 3 machine cycles for proper operation． | All |
| $\overline{\mathrm{RD}}$ | 8 | Output strobe activated during a BUS read．Can be used to enable data onto the bus from an external device． <br> Used as a read strobe to external data memory．（Active low） | All |
| $\overline{\mathrm{RESET}}$ | 4 | Input which is used to initialize the processor．（Active low）（Non TTL $\mathrm{V}_{\mathrm{IH}}$ ） | All |
|  |  | Used during power down． <br> 勝 特 力材 料 886－3－5753170 <br> 胜特力电子（上海）86－21－54151736 <br> 胜特力电子（深圳）86－755－83298787 <br> Http：／／www． 100 y ．com．tw | B048AH <br> 8035AHL <br> 8049AH <br> 8039AHL <br> 8050AH <br> 8040AHL |
|  |  | Used during programming． | $\begin{aligned} & \hline \mathrm{PB748H} \\ & \mathrm{P} 8749 \mathrm{H} \end{aligned}$ |
|  |  | Used during ROM verification． | $\begin{aligned} & \text { 8048AH } \\ & \text { P8748H } \\ & 8049 A H \\ & \text { P8749H } \\ & 8050 A H \end{aligned}$ |
| WR | 10 | Output strobe during a bus write．（Active low） Used as write strobe to external data memory． | All |
| ALE | 11 | Address latch enable．This signal occurs once during each cycle and is useful as a clock output． <br> The negative edge of ALE strobes address into external data and program memory． | All |
| PSEN | 9 | Program store enable．This output occurs only during a fetch to external program memory．（Active low） | All |
| SS | 5 | Single step input can be used in conjunction with ALE to＂single step＂ the processor through each instruction． | All |
|  |  | （Active low）Used in sync mode． | 8048AH <br> 8035AHL <br> 8049AH <br> 8039AHL <br> 8050AH <br> 8040AHL |
| EA | 7 | External access input which forces all program memory fetches to reference external memory．Useful for emulation and debug．（Active high） | All |
|  |  | Used during（18V）programming． | $\begin{aligned} & \mathrm{P8748H} \\ & \mathrm{P} 8749 \mathrm{H} \end{aligned}$ |
|  |  | Used during ROM verification（12V）． | 8048AH 8049AH 8050AH |
| XTAL1 | 2 | One side of crystal input for internal oscillator．Also input for external source．（Non TTL $V_{1 H}$ ） | All |
| XTAL2 | 3 | Other side of crystal input． | All |

## NOTES：

1．Control outputs： $\mathrm{C}_{\mathrm{L}}=80 \mathrm{pF}$ ．BUS Outputs： $\mathrm{C}_{\mathrm{L}}=150 \mathrm{pF}$ ．
2．BUS High Impedance Load 20 pF
3． $\mathrm{f}(\mathrm{t})$ assumes $50 \%$ duty cycle on $\mathrm{X} 1, \mathrm{X} 2$ ．Max clock period is for a 1 MHz crystal input．

## WAVEFORMS

INSTRUCTION FETCH FROM PROGRAM MEMORY

WRITE TO EXTERNAL DATA MEMORY

PORT 1/PORT 2 TIMING

READ FROM EXTERNAL DATA MEMORY

INPUT AND OUTPUT FOR A.C. TESTS

270053-7
A.C. testing inputs are driven at 2.4 V for a logic " 1 " and 0.45 V for a logic " 0 ". Output timing measurements are made at 2.0 V for a logic "1" and 0.8 V for a logic " 0 "

## CRYSTAL OSCILLATOR MODE

270053－9
$\mathrm{C} 1=5 \mathrm{pF}+1 / 2 \mathrm{pF}+($ STRAY $<5 \mathrm{pF})$
$\mathrm{C} 2=(\mathrm{CRYSTAL}+$ STAY $)<8 \mathrm{pF}$

$$
\mathrm{C} 3=20 \mathrm{pF} \pm 1 \mathrm{pF}+(\mathrm{STRAY}<5 \mathrm{pF})
$$

Crystal series resistance should be tess than $30 \Omega$ at 11 MHz ；less
than $75 \Omega$ at 6 MHz ；less than $180 \Omega$ at 3.6 MHz ．

## DRIVING FROM EXTERNAL SOURCE

270053－11
For XTAL1 and XTAL2 define＂high＂as voltages above 1.6 V and ＂low＂as voltages below 1.6 V ．The duty cycle requirements for externally driving XTAL1 and XTAL2 using the circuits shown above are as follows：XTAL1 must be high 35－65\％of the period and XTAL2 must be high $35-65 \%$ of the period．Rise and fall times must be faster than 20 ns．

MCS ${ }^{(1)}$-48

## PROGRAMMING AND VERIFYING THE P8749H/48H PROGRAMMABLE ROM

## Programming Verification

In brief, the programming process consists of: activating the program mode, applying an address, latching the address, applying data, and applying a programming pulse. Each word is programmed completely before moving on to the next and is followed by a verification step. The following is a list of the pins used for programming and a description of their functions:

| Pin | Function |
| :--- | :--- |
| XTAL1 | Clock Input (3 to 4.0 MHz ) |
| XTAL2 |  |
| $\overline{\text { RESET }}$ | Initialization and Address Latching |
| TO | Selection of Program or Verifying Mode |
| EA | Activation of Program/Verify Modes |
| BUS | Address and Data Input |
|  | Data Output During Verify |
| P20-P22 | Address Input |
| VDD | Programming Power Supply |
| PROG | Program Pulse Input |

## WARNING:

An attempt to program a missocketed $\mathrm{P} 8749 \mathrm{H} / 48 \mathrm{H}$ will result in severe damage to the part. An indication of a properly socketed part is the appearance of the ALE clock output. The lack of this clock may be used to disable the programmer.

The Program/Verify sequence is:

1. $\mathrm{V}_{D D}=5 \mathrm{~V}$, Clock applied or internal oscillator operating, $\overline{\text { RESET }}=O \mathrm{~V}, \mathrm{TO}=5 \mathrm{~V}, \mathrm{EA}=5 \mathrm{~V}$, BUS and PROG floating. P10 and P11 must be tied to ground.
2. Insert $\mathrm{P} 8749 \mathrm{H} / 48 \mathrm{H}$ in programming socket
3. $\mathrm{TO}=\mathrm{OV}$ (select program mode)
4. $E A=18 \mathrm{~V}$ (activate program mode)
5. Address applied to BUS and P20-22
6. $\overline{\text { RESET }}=5 \mathrm{~V}$ (latch address)
7. Data applied to BUS
8. $\mathrm{V}_{\mathrm{DD}}=21 \mathrm{~V}$ (programming power)
9. $\mathrm{PROG}=\mathrm{V}_{C C}$ or fioat followed by one 50 ms pulse to 18 V
10. $V_{D D}=5 \mathrm{~V}$.
11. $\mathrm{TO}=5 \mathrm{~V}$ (verify mode)
12. Read and verify data on BUS
13. $\mathrm{TO}=\mathrm{OV}$
14. $\overline{\text { RESET }}=\mathrm{OV}$ and repeat from step 5
15. Programmer should be at conditions of step 1 when $\mathrm{P} 8749 \mathrm{H} / 48 \mathrm{H}$ is removed from socket.

NOTE:
Once programmed the $\mathrm{P} 8749 \mathrm{H} / 48 \mathrm{H}$ cannot be erased.

A．C．TIMING SPECIFICATION FOR PROGRAMMING P8748H／P8749H ONLY
$T_{A}=25^{\circ} \mathrm{C} \pm 5^{\circ} \mathrm{C} ; \mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V} \pm 5 \% ; \mathrm{V}_{\mathrm{DD}}=21 \pm 0.5 \mathrm{~V}$

| Symbol | Parameter | Min | Max | Unit | Test Conditions |
| :---: | :---: | :---: | :---: | :---: | :---: |
