- ADJUSTABLE OUTPUT VOLTAGE DOWN TO 2.85 V
- INPUT OVERVOLTAGE PROTECTION (UP TO 60 V, 10 ms)

### DESCRIPTION

The L200 is a monolithic integrated circuit for voltage and current programmable regulation. It is available in Pentawatt® package or 4-lead TO-3 metal case. Current limiting, power limiting, thermal shutdown and input overvoltage protection (up to

60 V) make the L200 virtually blow-out proof. The L200 can be used to replace fixed voltage regulators when high output voltage precision is required and eliminates the need to stock a range of fixed voltage regulators.

Figure 23. Programmable Voltage and Current Regulator.

Note: Connecting point A to a negative voltage (for example -3V/10 mA) it is possible to extend the output voltage range down to 0 V and obtain the current limiting down to this level (output short-circuit condition).

Figure 24. High Current Regulator with NPN Pass Transistor.

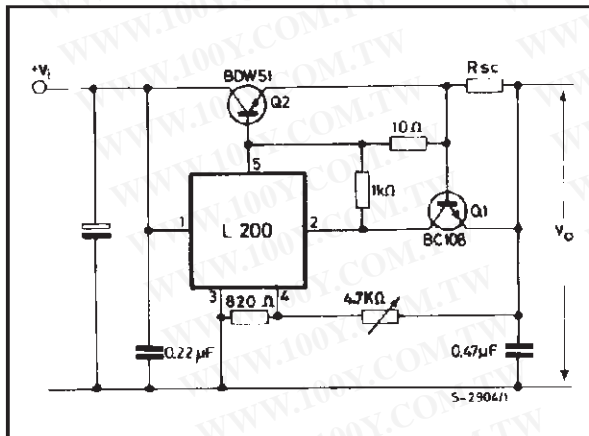

Figure 25. High Current Tracking Regulator.

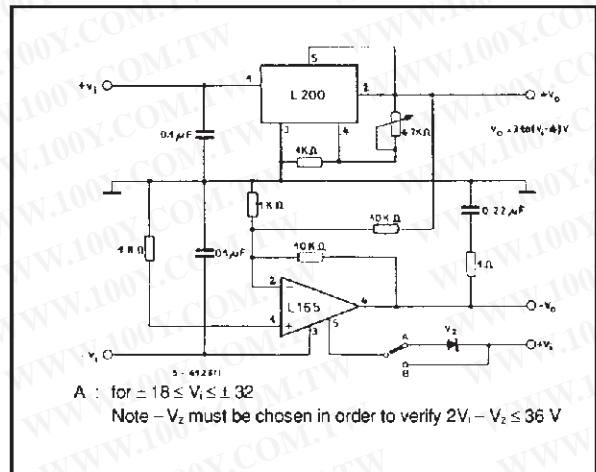

Figure 26. High Input and Output Voltage.

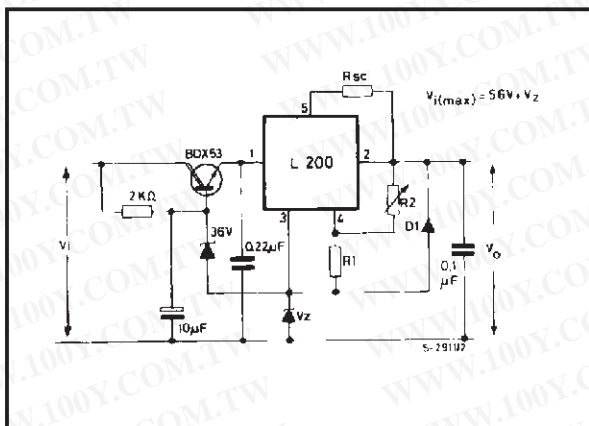

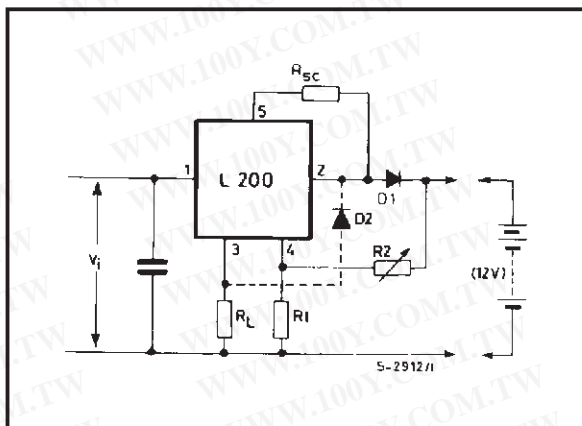

Figure 27. Constant Current Battery Charger.

The resistors  $R_1$  and  $R_2$  determine the final charging voltage and  $R_{SC}$  the initial charging current.  $D_1$  prevents discharge of the battery through the regulator.

The resistor  $R_L$  limits the reverse currents through the regulator (which should be 100 mA max) when the battery is accidentally reverse connected. If  $R_L$  is in series with a bulb of 12 V/50 mA rating this will indicate incorrect connection.
