## NE／SE5539

## High frequency operational amplifier

Product specification

## DESCRIPTION

The NE／SE5539 is a very wide bandwidth，high slew rate，monolithic operational amplifier for use in video amplifiers，RF amplifiers，and extremely high slew rate amplifiers．

Emitter－follower inputs provide a true differential input impedance device．Proper external compensation will allow design operation over a wide range of closed－loop gains，both inverting and non－inverting，to meet specific design requirements．

## FEATURES

－Bandwidth
－Unity gain－350MHz
－Full power－48MHz
－GBW－1．2GHz at 17 dB
－Slew rate： $600 / V \mu \mathrm{~s}$
－Avol：52dB typical
－Low noise $-4 n \vee \sqrt{ } \mathrm{~Hz}$ typical
－MIL－STD processing available

## APPLICATIONS

－High speed datacom
－Video monitors \＆TV

## PIN CONFIGURATION

Figure 1．Pin Configuration
－Satellite communications
－Image processing
－RF instrumentation \＆oscillators
－Magnetic storage
－Military communications

## ORDERING INFORMATION

| DESCRIPTION | TEMPERATURE RANGE | ORDER CODE | DWG \＃ |
| :--- | :---: | :---: | :---: |
| 14－Pin Plastic Dual In－Line Package（DIP） | 0 to $+70^{\circ} \mathrm{C}$ | NE5539N | SOT27－1 |
| 14－Pin Plastic Small Outline（SO）package | 0 to $+70^{\circ} \mathrm{C}$ | NE5539D | SOT108－1 |
| 14－Pin Ceramic Dual In－Line Package | 0 to $+70^{\circ} \mathrm{C}$ | NE5539F | 0581 B |
| 14－Pin Ceramic Dual In－Line Package | -55 to $+125^{\circ} \mathrm{C}$ | SE5539F | 0581 B |

## ABSOLUTE MAXIMUM RATINGS ${ }^{1}$

| SYMBOL | PARAMETER | RATING | UNITS |

| $\mathrm{V}_{\text {CC }}$ | Supply voltage | $\pm 12$ | V |
| $\mathrm{P}_{\text {DMAX }}$ | Maximum power dissipation， $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$（still－air）${ }^{2}$ <br> F package <br> N package <br> D package | $\begin{aligned} & 1.17 \\ & 1.45 \\ & 0.99 \end{aligned}$ | $\begin{aligned} & w \\ & w \\ & w \end{aligned}$ |
| $\mathrm{T}_{\text {A }}$ | Operating temperature range NE SE | $\begin{gathered} 0 \text { to } 70 \\ -55 \text { to }+125 \end{gathered}$ | $\begin{aligned} & { }^{\circ} \mathrm{C} \\ & { }^{\circ} \mathrm{C} \end{aligned}$ |
| $\mathrm{T}_{\text {STG }}$ | Storage temperature range | －65 to＋150 | ${ }^{\circ} \mathrm{C}$ |
| $\mathrm{T}_{J}$ | Max junction temperature | 150 | ${ }^{\circ} \mathrm{C}$ |
| TSOLD | Lead soldering temperature（10sec max） | ＋300 | ${ }^{\circ} \mathrm{C}$ |

## NOTES：

1．Differential input voltage should not exceed 0.25 V to prevent excesive input bias current and common－mode voltage 2.5 V ．These voltage limits may be exceeded if current is limited to less than 10 mA ．
2．Derate above $25^{\circ} \mathrm{C}$ ，at the following rates：
F package at $9.3 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$
N package at $11.6 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$
D package at $7.9 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$

## CIRCUIT LAYOUT CONSIDERATIONS

As may be expected for an ultra－high frequency，wide－gain bandwidth amplifier，the physical circuit is extremely critical．

Bread－boarding is not recommended．A double－sided copper－clad printed circuit board will result in more favorable system operation． An example utilizing a 28 dB non－inverting amp is shown in Figure 6.

SL00575

High frequency operational amplifier
NE／SE5539

## NE5539 COLOR VIDEO AMPLIFIER

The NE5539 wideband operational amplifier is easily adapted for use as a color video amplifier．A typical circuit is shown in Figure 7 along with vector－scope1 photographs showing the amplifier differential gain and phase response to a standard five－step modulated staircase linearity signal（Figures 8， 9 and 10）．As can be seen in Figure 9，the gain varies less than $0.5 \%$ from the bottom to the top of the staircase．The maximum differential phase shown in Figure 10 is approximately $+0.1^{\circ}$ ．

The amplifier circuit was optimized for a $75 \Omega$ input and output termionation impedance with a gain of approximately 10 （20dB）．

NOTE：
1．The input signal was 200 mV and the output 2 V ． $\mathrm{V}_{\mathrm{CC}}$ was $\pm 8 \mathrm{~V}$ ．

Figure 7．NE5539 Video Amplifier

Figure 8．Input Signal

Figure 9．Differential Gain＜0．5\％
NOTE：
Instruments used for these measurements were Tektronix 146 NTSC test signal generator，520A NTSC vectorscope，and 1480 waveform monitor．
