

# DS90C383B

## +3.3V Programmable LVDS Transmitter 24-Bit Flat Panel Display (FPD) Link-65 MHz

### General Description

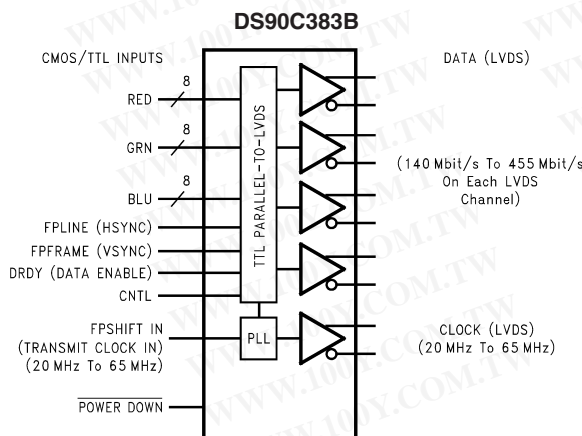

The DS90C383B transmitter converts 28 bits of CMOS/TTL data into four LVDS (Low Voltage Differential Signaling) data streams. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. Every cycle of the transmit clock 28 bits of input data are sampled and transmitted. At a transmit clock frequency of 65 MHz, 24 bits of RGB data and 3 bits of LCD timing and control data (FPLINE, FPFRAME, DRDY) are transmitted at a rate of 455 Mbps per LVDS data channel. Using a 65 MHz clock, the data throughput is 227 Mbytes/sec. The DS90C383B transmitter can be programmed for Rising edge strobe or Falling edge strobe through a dedicated pin. A Rising edge or Falling edge strobe transmitter will interoperate with a Falling edge strobe Receiver (DS90CF386) without any translation logic.

This chipset is an ideal means to solve EMI and cable size problems associated with wide, high speed TTL interfaces.

### Features

- No special start-up sequence required between clock/data and /PD pins. Input signal (clock and data) can be applied either before or after the device is powered.
- Support Spread Spectrum Clocking up to 100kHz frequency modulation & deviations of  $\pm 2.5\%$  center spread or  $-5\%$  down spread.
- "Input Clock Detection" feature will pull all LVDS pairs to logic low when input clock is missing and when /PD pin is logic high.
- 18 to 68 MHz shift clock support
- Best-in-Class Set & Hold Times on TxINPUTs
- Tx power consumption < 130 mW (typ) @65MHz Grayscale
- 40% Less Power Dissipation than BiCMOS Alternatives
- Tx Power-down mode < 60 $\mu$ W (typ)
- Supports VGA, SVGA, XGA and Dual Pixel SXGA.
- Narrow bus reduces cable size and cost
- Up to 1.8 Gbps throughput
- Up to 227 Megabytes/sec bandwidth
- 345 mV (typ) swing LVDS devices for low EMI
- PLL requires no external components
- Compatible with TIA/EIA-644 LVDS standard
- Low profile 56-lead TSSOP package
- Improved replacement for:  
SN75LVDS83, DS90C383A

TSTC	TxIN Setup to TxCLK IN (Figure 6)	2.5			ns	
THTC	TxIN Hold to TxCLK IN (Figure 6)	0.5			ns	
TCCD	TxCLK IN to TxCLK OUT Delay (Figure 7) 50% duty cycle input clock is assumed, T <sub>A</sub> = -10°C, and 65MHz for "Min", T <sub>A</sub> = 70°C, and 25MHz for "Max", V <sub>CC</sub> = 3.6V, R <sub>FB</sub> = V <sub>CC</sub>	3.340		7.211	ns	
	TxCLK IN to TxCLK OUT Delay (Figure 7) 50% duty cycle input clock is assumed, T <sub>A</sub> = -10°C, and 65MHz for "Min", T <sub>A</sub> = 70°C, and 25MHz for "Max", V <sub>CC</sub> = 3.6V, R <sub>FB</sub> = GND	3.011		6.062	ns	
SSCG	Spread Spectrum Clock support; Modulation frequency with a linear profile(Note 6).	f = 25MHz		100kHz ± 2.5%/-5%		
		f = 40MHz		100kHz ± 2.5%/-5%		
		f = 65MHz		100kHz ± 2.5%/-5%		
TPLLS	Transmitter Phase Lock Loop Set (Figure 8)			10	ms	
TPDD	Transmitter Power Down Delay (Figure 10)			100	ns	

**Note 5:** The Minimum and Maximum Limits are based on statistical analysis of the device performance over process, voltage, and temperature ranges. This parameter is functionality tested only on Automatic Test Equipment (ATE).

**Note 6:** Care must be taken to ensure TSTC and THTC are met so input data are sampling correctly. This SSCG parameter only shows the performance of tracking Spread Spectrum Clock applied to TxCLK IN pin, and reflects the result on TxCLKOUT+ and TxCLK- pins.

## DS90C383B Pin Description—FPD Link Transmitter

Pin Name	I/O	No.	Description
TxIN	I	28	TTL level input. This includes: 8 Red, 8 Green, 8 Blue, and 4 control lines—FPLINE, FPFRRAME and DRDY (also referred to as HSYNC, VSYNC, Data Enable).
TxOUT+	O	4	Positive LVDS differential data output.
TxOUT-	O	4	Negative LVDS differential data output.
FPSHIFT IN	I	1	TTL level clock input. The falling edge acts as data strobe. Pin name TxCLK IN.
R_FB	I	1	Programmable strobe select (See Table 1).
TxCLK OUT+	O	1	Positive LVDS differential clock output.
TxCLK OUT-	O	1	Negative LVDS differential clock output.
PWR DOWN	I	1	TTL level input. Assertion (low input) TRI-STATES the outputs, ensuring low current at power down. See Applications Information section.
$V_{CC}$	I	3	Power supply pins for TTL inputs.
GND	I	5	Ground pins for TTL inputs.
PLL $V_{CC}$	I	1	Power supply pin for PLL.
PLL GND	I	2	Ground pins for PLL.
LVDS $V_{CC}$	I	1	Power supply pin for LVDS outputs.
LVDS GND	I	3	Ground pins for LVDS outputs.

## Applications Information

The DS90C383B are backward compatible with the DS90C383/DS90CF383, DS90C383A/DS90CF383A and are a pin-for-pin replacement.

This device may also be used as a replacement for the DS90CF583 (5V, 65MHz) and DS90CF581 (5V, 40MHz) FPD-Link Transmitters with certain considerations/modifications:

1. Change 5V power supply to 3.3V. Provide this supply to the  $V_{CC}$ , LVDS  $V_{CC}$  and PLL  $V_{CC}$  of the transmitter.
2. The DS90C383B transmitter input and control inputs accept 3.3V LVTTTL/LVCMOS levels. They are not 5V tolerant.
3. To implement a falling edge device for the DS90C383B, the R\_FB pin (pin 17) may be tied to ground OR left unconnected (an internal pull-down resistor biases this pin low). Biasing this pin to Vcc implements a rising edge device.

### TRANSMITTER INPUT PINS

The TxIN and control input pins are compatible with LVCMOS and LVTTTL levels. These pins are not 5V tolerant.

### TRANSMITTER INPUT CLOCK/DATA SEQUENCING

The DS90C383B does not require any special requirement for sequencing of the input clock/data and PD (PowerDown) signal. The DS90C383B offers a more robust input sequencing feature where the input clock/data can be inserted after the release of the PD signal. In the case where the clock/

data is stopped and reapplied, such as changing video mode within Graphics Controller, it is not necessary to cycle the PD signal. However, there are in certain cases where the PD may need to be asserted during these mode changes. In cases where the source (Graphics Source) may be supplying an unstable clock or spurious noisy clock output to the LVDS transmitter, the LVDS Transmitter may attempt to lock onto this unstable clock signal but is unable to do so due the instability or quality of the clock source. The PD signal in these cases should then be asserted once a stable clock is applied to the LVDS transmitter. Asserting the  $\overline{\text{PWR DOWN}}$  pin will effectively place the device in reset and disable the PLL, enabling the LVDS Transmitter into a power saving standby mode. However, it is still generally a good practice to assert the  $\overline{\text{PWR DOWN}}$  pin or reset the LVDS transmitter whenever the clock/data is stopped and reapplied but it is not mandatory for the DS90C383B.

### SPREAD SPECTRUM CLOCK SUPPORT

The DS90C383B can support Spread Spectrum Clocking signal type inputs. The DS90C383B outputs will accurately track Spread Spectrum Clock/Data inputs with modulation frequencies of up to 100kHz (max.) with either center spread of  $\pm 2.5\%$  or down spread  $-5\%$  deviations.

### POWER SOURCES SEQUENCE

In typical applications, it is recommended to have  $V_{CC}$ , LVDS  $V_{CC}$  and PLL  $V_{CC}$  from the same power source with three separate de-coupling bypass capacitor groups. There is no requirement on which VCC entering the device first.

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

**BANNED SUBSTANCE COMPLIANCE**

National Semiconductor manufactures products and uses packing materials that meet the provisions of the Customer Products Stewardship Specification (CSP-9-111C2) and the Banned Substances and Materials of Interest Specification (CSP-9-111S2) and contain no "Banned Substances" as defined in CSP-9-111S2.  
 Leadfree products are RoHS compliant.
