**Product specification** 

## Dual 4-channel analogue multiplexer/demultiplexer

HEF4052B MSI

#### **DESCRIPTION**

The HEF4052B is a dual 4-channel analogue multiplexer/demultiplexer with common channel select logic. Each multiplexer/demultiplexer has four independent inputs/outputs  $(Y_0 \text{ to } Y_3)$  and a common input/output (Z). The common channel select logic includes two address inputs  $(A_0 \text{ and } A_1)$  and an active LOW enable input  $(\overline{E})$ .

Both multiplexers/demultiplexers contain four bidirectional analogue switches, each with one side connected to an independent input/output ( $Y_0$  to  $Y_3$ ) and the other side connected to a common input/output (Z).

With  $\overline{E}$  LOW, one of the four switches is selected (low impedance ON-state) by  $A_0$  and  $A_1$ . With  $\overline{E}$  HIGH, all switches are in the high impedance OFF-state, independent of  $A_0$  and  $A_1$ .

 $V_{DD}$  and  $V_{SS}$  are the supply voltage connections for the digital control inputs  $(A_0,\,A_1$  and  $\overline{E}).$  The  $V_{DD}$  to  $V_{SS}$  range is 3 to 15 V. The analogue inputs/outputs  $(Y_0$  to  $Y_3,$  and Z) can swing between  $V_{DD}$  as a positive limit and  $V_{EE}$  as a negative limit.  $V_{DD}-V_{EE}$  may not exceed 15 V.

For operation as a digital multiplexer/demultiplexer, V<sub>EE</sub> is connected to V<sub>SS</sub> (typically ground).

#### **PINNING**

 $Y_{0A}$  to  $Y_{3A}$  independent inputs/outputs  $Y_{0B}$  to  $Y_{3B}$  independent inputs/outputs  $A_0$ ,  $A_1$  address inputs

E enable input (active LOW)

Z<sub>A</sub>, Z<sub>B</sub> common inputs/outputs

## Dual 4-channel analogue multiplexer/demultiplexer

**HEF4052B** MSI

## **FUNCTION TABLE**

INPUTS			CHANNEL		
Ē	A <sub>1</sub>	A <sub>0</sub> $\checkmark$	ON CO		
L	L	L	Y <sub>0A</sub> –Z <sub>A</sub> ; Y <sub>0B</sub> –Z <sub>B</sub>		
L	L	Н	$Y_{1A}-Z_A; Y_{1B}-Z_B$		
L	Н	L	$Y_{2A}-Z_A; Y_{2B}-Z_B$		
L	Н	Н	$Y_{3A}-Z_A; Y_{3B}-Z_B$		
Н	Х	X	none		

#### **Notes**

1. H = HIGH state (the more positive voltage)

L = LOW state (the less positive voltage)

X = state is immaterial

### **RATINGS**

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Supply voltage (with reference to V<sub>DD</sub>) -18 to + 0.5 V

#### Note

1. To avoid drawing V<sub>DD</sub> current out of terminal Z, when switch current flows into terminals Y, the voltage drop across the bidirectional switch must not exceed 0,4 V. If the switch current flows into terminal Z, no V<sub>DD</sub> current will flow out of terminals Y, in this case there is no limit for the voltage drop across the switch, but the voltages at Y and Z may not exceed  $V_{DD}$  or  $V_{EE}$ .

#### Notes

V<sub>is</sub> is the input voltage at a Y or Z terminal, whichever is assigned as input.

V<sub>os</sub> is the output voltage at a Y or Z terminal, whichever is assigned as output.

- 1.  $R_L = 10 \text{ k}\Omega$  to  $V_{EE}$ ;  $C_L = 50 \text{ pF}$  to  $V_{EE}$ ;  $\overline{E} = V_{SS}$ ;  $V_{is} = V_{DD}$  (square-wave); see Fig.8.
- 2.  $R_L = 10 \text{ k}\Omega$ ;  $C_L = 50 \text{ pF to V}_{EE}$ ;  $\overline{E} = V_{SS}$ ;  $A_n = V_{DD}$  (square-wave);  $V_{is} = V_{DD}$  and  $R_L$  to  $V_{EE}$  for  $t_{PLH}$ ;  $V_{is} = V_{EE}$  and  $R_L$  to  $V_{DD}$  for  $t_{PHL}$ ; see Fig.8.

## Dual 4-channel analogue multiplexer/demultiplexer

HEF4052B MSI

WWW.100Y.COM.TW

## **APPLICATION INFORMATION**

Some examples of applications for the HEF4052B are:

- Analogue multiplexing and demultiplexing.
- Digital multiplexing and demultiplexing.
- · Signal gating.

## **NOTE**

If break before make is needed, then it is necessary to use the enable input.
