ORDERING EXAMPLE

The ordering code of a RC0402 chip resistor, value 56 Ω with $\pm 1\%$ tolerance, supplied in 7-inch tape reel is: RC0402FR-0756RL.

NOTE

- The "L" at the end of the code is only for ordering. On the reel label, the standard CTC will be mentioned an additional stamp "LFP"= lead free production.
- Products with lead in terminations fulfil the same requirements as mentioned in this datasheet.
- Products with lead in terminations will be phased out in the coming months (before July 1st, 2006)

W.100Y.COM. MARKING

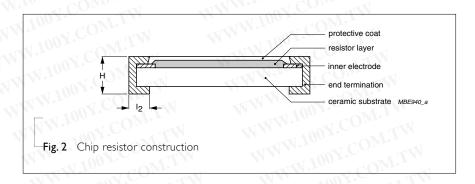

RC0402

No marking

CONSTRUCTION

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive paste. The composition of the paste is adjusted to give the approximate required resistance and laser cutting of this resistive layer that achieves tolerance trims the value. The resistive layer is covered with a protective coat.

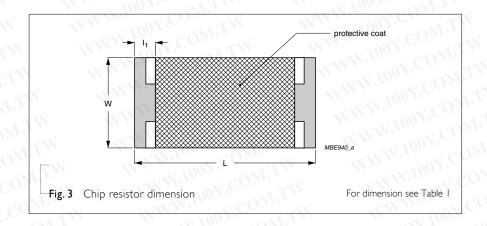

Finally, the two external terminations (pure Tin) are added. See fig. 2.

FUNCTIONAL DESCRIPTION

POWER RATING

RC0402 rated power at 70°C is I/16 W

RATED VOLTAGE

The DC or AC (rms) continuous working voltage corresponding to the rated power is determined by the following formula:

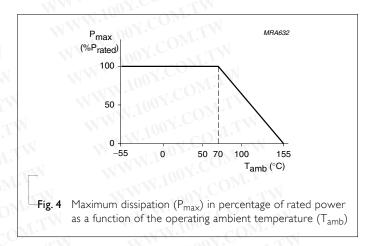

$$V=\sqrt{(P \times R)}$$

Where

V=Continuous rated DC or AC (rms) working voltage (V)

P=Rated power (W)

R=Resistance value (Ω)
