

V25™ 16/8-BIT SINGLE-CHIP MICROCONTROLLER

The μPD70320 (V25) is a single-chip microcontroller on which 16-bit CPU, RAM, serial interface, timer, DMA controller, interrupt controller, etc. are all integrated. The μPD70320 is compatible with the 8/16-bit microprocessor μPD70108/70116 (V20™/V30™) on the software level.

The details of the functions are described in the following User's Manuals. Be sure to read it before starting design.

- V25, V35™ User's Manual — Hardware : IEM-1220
- V25, V35 Family User's Manual — Instructions : U12120J (Japanese version)

FEATURES

- Internal 16-bit architecture and external 8-bit data bus
- Compatible with μPD70108/70116 (in native mode) on software level (some instructions added)
- Minimum instruction cycle : 400 ns/5 MHz (μPD70320)
250 ns/8 MHz (μPD70320-8)
- On-chip RAM : 256 words × 8 bits
- Input port (port T) with comparator : 8 bits
- I/O lines (input port : 4 bits, input/output port : 20 bits)
- Serial interface (internal dedicated baud rate generator) : 2 channels
Asynchronous mode and I/O interface mode
- Interrupt controller
 - Programmable priority (8 levels)
 - Vectored interrupt function
 - Register bank switching function
 - Macro service function
- DRAM and pseudo SRAM refreshing functions
- DMA controller : 2 channels
- 16-bit timer : 2 channels
- Time base counter
- On-chip clock generator
- Programmable wait function
- Standby function (STOP/HALT)

★ ORDERING INFORMATION

Part Number	Package	Max. Operating Frequency (MHz)
μPD70320L	84-pin plastic QFJ (1150 × 1150 mils)	5
μPD70320L-8	84-pin plastic QFJ (1150 × 1150 mils)	8
μPD70320GJ-5BG	94-pin plastic QFP (20 × 20 mm)	5
μPD70320GJ-8-5BG	94-pin plastic QFP (20 × 20 mm)	8

Remark The plastic QFJ is a new name of the PLCC.

1. PIN FUNCTIONS

1.1 Port Pins

Pin Name	Input/Output	Port Function	Control Function
P00 to P06	Input & output	8-bit input/output ports, each to be specified bit-by-bit	—
P07/CLKOUT	Input & output/output		System clock output
P10/NMI	Input	Used as non-maskable interrupt request input (input port)	—
P11/ $\overline{\text{INTP0}}$			
P12/ $\overline{\text{INTP1}}$			
P13/ $\overline{\text{INTP2}}/\overline{\text{INTAK}}$	Input/input/output		INT acknowledge signal output
P14/ $\overline{\text{POLL}}/\overline{\text{INT}}$	Input & output/input/input	Used as both specifiable input/output port and $\overline{\text{POLL}}$ input	External interrupt request input
P15/TOUT	Input & output/output	Input/output port specifiable bit-by-bit	Timer output
P16/ $\overline{\text{SCK0}}$			Serial clock output
P17/READY	Input & output/input		READY input
P20/DMARQ0	Input & output/input	8-bit input/output port specifiable bit-by-bit	DMA request input (CH0)
P21/ $\overline{\text{DMAAK0}}$	Input & output/output		DMA acknowledge output (CH0)
P22/ $\overline{\text{TC0}}$			DMA end output (CH0)
P23/DMARQ1	Input & output/input		DMA request input (CH1)
P24/ $\overline{\text{DMAAK1}}$	Input & output/output		DMA acknowledge output (CH1)
P25/ $\overline{\text{TC1}}$		DMA end output (CH1)	
P26/ $\overline{\text{HLD}}/\overline{\text{AK}}$	Input & output/output		HOLD acknowledge output
P27/HLDRQ	Input & output/input		HOLD input
PT0 to PT7	Input	8-bit input port with comparator	—

Remark All port pins become input ports after reset is released.
 When using P13/ $\overline{\text{INTP2}}/\overline{\text{INTAK}}$ as a $\overline{\text{INTAK}}$ pin, be sure to pull up the pin to avoid a malfunction of external interrupt controller after reset is released.

1.2 Non-port Pins

Pin Name	Input/Output	Function
TxD0	Output	Serial data output
TxD1		
RxD0	Input	Serial data input
RxD1		
CTS0	Input & output	CTS input in asynchronous mode, receive clock input/output in I/O interface mode
CTS1	Input	CTS input
REFRQ	Output	DRAM refresh pulse output
V _{TH}	Input	Comparator reference voltage input
RESET		Reset signal input
E _A		External memory access (connect to GND via a resistor (3 to 10 kΩ))
X1	Input	Used to connect crystal resonator/ceramic resonator for oscillating system clock.
X2		External clock is entered by entering reverse phase clock to both X1 and X2 pins.
D0 to D7	Input & output	8-bit data bus
A0 to A19	Output	20-bit address output
MREQ		Output used to indicate that memory bus cycle has been started
MSTB		Memory read/memory write strobe output
R/W		Read cycle/write cycle ID signal output
IOSTB		I/O read/I/O write strobe output
V _{DD}		Positive power supply pins (all pins should be connected)
GND		GND pins (all pins should be connected)
IC	Internally connected (connect individually to V _{DD} via a resistor (3 to 10 kΩ))

2. INSTRUCTION SETS

The μPD70320 instruction sets are upward-compatible with those of μPD70108/70116 in native mode.

2.1 Instructions Added to μPD70108/70116

The following instructions are newly added to the μPD70108/70116.

(1) Conditional branch instruction

- BTCLR Bit test instruction used for special function registers

If, when this BTCLR is executed, the target special function register bit status is “1”, the bit is reset (0) and the program is branched to short-label described in the operand. If the target bit status is “0”, the program is moved to the next instruction. PSW is not changed in this instruction.

(Descriptive format)

Mnemonic	Operand		
	Special Function Register Address	Special Function Register Bit	Branch Address
BTCLR	sfr	imm3	short-label

(2) Interrupt instructions

- RETRBI Return instruction used for register banks

This instruction is used to return the program from the interrupt service routine in which the register bank switching function is used. It cannot be used for returning from vectored interrupt servicing.

(Descriptive format)

Mnemonic	Operand
RETRBI	None

- FINT This instruction is used to report the interrupt controller that interrupt servicing has ended.

If an interrupt other than NMI, INT, and software interrupt is used, this instruction must be executed prior to the instruction for returning from interrupt servicing. It should not be used for NMI, INT and software interrupts.

(Descriptive format)

Mnemonic	Operand
FINT	None

(3) CPU instruction

- STOP Instruction for transition to STOP state

(Descriptive format)

Mnemonic	Operand
STOP	None

勝特力材料 886-3-5753170
 勝特力电子(上海) 86-21-54151736
 勝特力电子(深圳) 86-755-83298787
[Http://www.100y.com.tw](http://www.100y.com.tw)

(4) Register bank switch instructions

- BRKCS Used to switch register banks

A register bank is switched to the register bank indicated by the lower 3 bits in the 16-bit register described in the operand. The program is also branched with this instruction to the address obtained from the PS stored in advance in the new register bank and the vector PC. The RETRBI instruction is used to return the program from the new register bank.

(Descriptive format)

Mnemonic	Operand
BRKCS	reg16

- TSKSW Used to switch register banks

Just like the BRKCS instruction, this instruction is also executed to select a register bank. The program is branched to the address obtained from the PS stored in advance in the new register bank and the address obtained from the PC save area.

(Descriptive format)

Mnemonic	Operand
TSKSW	reg16

(5) Data transfer instructions

- MOVSPA ... Used to transfer SS and SP values

This instruction is executed to transfer both SS and SP values before the register bank is switched to SS and SP of the current (post-switching) register bank.

(Descriptive format)

Mnemonic	Operand
MOVSPA	None

- MOVSPB ... Used to transfer SS and SP values

This instruction is executed to transfer the SS and SP values of the current (pre-switching) register bank to the SS and SP of the new register bank indicated by the lower 3 bits in the 16-bit register described in the operand.

(Descriptive format)

Mnemonic	Operand
MOVSPB	reg16

Some μPD70108/70116 instructions should be much cared as shown below when used for the μPD70320.

- I/O instruction, primitive I/O instruction

If PSW $\overline{\text{IBRK}}$ flag is reset (0), an interrupt is generated without executing this instruction. Be sure to set (1) the $\overline{\text{IBRK}}$ flag when using the I/O instruction.

- FPO instruction

An interrupt is generated without executing this instruction.

2.2 Instruction Set Operation

Table 2-1. Operand Identifier

Identifier	Description
reg	8-/16-bit general register
reg8	8-bit general register
reg16	16-bit general register
dmem	8-/16-bit memory location
mem	8-/16-bit memory location
mem8	8-bit memory location
mem16	16-bit memory location
mem32	32-bit memory location
sfr	8-bit special function register location
imm	Constant within 0 to FFFFH
imm3	Constant within 0 to 7
imm4	Constant within 0 to FH
imm8	Constant within 0 to FFH
imm16	Constant within 0 to FFFFH
acc	Register AW or AL
sreg	Segment register
src-table	256-byte conversion table name
src-block	Register IX-addressed block name
dst-block	Register IY-addressed block name
near-proc	Procedure in the current program segment
far-proc	Procedure in another program segment
near-label	Label in the current program segment
short-label	Label within end of instruction to -128 to +127 bytes
far-label	Label in another program segment
memptr16	Word including location offset in the current program segment to which control is to be passed
memptr32	Double-word including location offset in another program segment to which control is to be passed and segment base address
regptr16	16-bit general register including location offset in another program segment to which control is to be passed
pop-value	Number of bytes to be abandoned from stack (0 to 64K, normally even number)
fp-op	Immediate value to judge instruction code of external floating point operation chip
R	Register set

Table 2-2. Operation Code Identifier

Identifier	Description
W	Byte/word specification bit (0: byte, 1: word). However, when s = 1, the sign extended byte data should be 16-bit operand even when W is 1.
reg	Register field (000 to 111)
mem	Memory field (000 to 111)
mod	Mode field (00 to 10)
s	Sign extension specification bit (0: Sign is not extended, 1: Sign is extended)
X, XXX, YYY, ZZZ	Data used to judge instruction code of external floating-point operation chip

Table 2-3. Operation Identifier (1/2)

Identifier	Description
AW	Accumulator (16 bits)
AH	Accumulator (upper byte)
AL	Accumulator (lower byte)
BW	Register BW (16 bits)
CW	Register CW (16 bits)
CL	Register CW (lower byte)
DW	Register DW (16 bits)
SP	Stack pointer (16 bits)
PC	Program counter (16 bits)
PSW	Program status word (16 bits)
IX	Index register (source) (16 bits)
IY	Index register (destination) (16 bits)
PS	Program segment register (16 bits)
DS1	Data segment 1 register (16 bits)
DS0	Data segment 0 register (16 bits)
SS	Stack segment register (16 bits)
AC	Auxiliary carry flag
CY	Carry flag
P	Parity flag
S	Sign flag
Z	Zero flag
DIR	Direction flag
IE	Interrupt enable flag
V	Overflow flag
BRK	Break flag
MD	Mode flag
(...)	Contents in memory shown in ()
disp	Displacement (8/16 bits)
ext-disp8	16 bits obtained by extending sign of 8-bit displacement

勝特力材料 886-3-5753170
 勝特力电子(上海) 86-21-54151736
 勝特力电子(深圳) 86-755-83298787
[Http://www.100y.com.tw](http://www.100y.com.tw)

Table 2-3. Operation Identifier (2/2)

Identifier	Description
temp	Temporary register (8/16/32 bits)
tmpcy	Temporary carry flag (1 bit)
seg	Immediate segment data (16 bits)
offset	Immediate offset data (16 bits)
←	Transfer direction
+	Addition
-	Subtraction
×	Multiplication
÷	Division
%	Modulo
^	AND
∨	OR
⊕	Exclusive OR
xxH	2-digit hexadecimal number
xxxxH	4-digit hexadecimal number

Table 2-4. Flag Operation Identifier

Identifier	Description
(Blank)	No change
0	Cleared to 0
1	Set to 1
×	Set or cleared according to the result
U	Not defined
R	The previously saved value is restored.

Table 2-5. 8/16-Bit General Register Selection

reg	W = 0	W = 1
000	AL	AW
001	CL	CW
010	DL	DW
011	BL	BW
100	AH	SP
101	CH	BP
110	DH	IX
111	BH	IY

勝特力材料 886-3-5753170
 勝特力电子(上海) 86-21-54151736
 勝特力电子(深圳) 86-755-83298787
[Http://www.100y.com.tw](http://www.100y.com.tw)

Table 2-6. Segment Register Selection

sreg	
00	DS1
01	PS
10	SS
11	DS0

The number of clocks, for memory operand, differs among addressing modes. So, use the following values for "EA" items shown in Table 2-8 Number of Clocks.

Table 2-7. Number of Clocks for Each Memory Addressing

mem \ mod	00		01		10	
		Clocks		Clocks		Clocks
000	BW + IX	3	BW + IX + disp8	3	BW + IX + disp16	4
001	BW + IY	3	BW + IY + disp8	3	BW + IY + disp16	4
010	BP + IX	3	BP + IX + disp8	3	BP + IX + disp16	4
011	BP + IY	3	BP + IY + disp8	3	BP + IY + disp16	4
100	IX	3	IX + disp8	3	IX + disp16	4
101	IY	3	IY + disp8	3	IY + disp16	4
110	Direct address	3	BP + disp8	3	BP + disp16	4
111	BW	3	BW + disp8	3	BW + disp16	4

"T" indicates the number of wait states. Use any number of waits starting at "0" (no wait).

The instruction fetch cycle is not counted as the number of clocks.

There are some branch instructions for which such description as the example below is provided.

The description indicates as follows:

Example 15/8 ... 15: the number of clock cycles when branched

8: the number of clock cycles when not branched

LDEA	reg16,mem16	1 0 0 0 1 1 0 1	mod reg mem	2 to 4	reg16 ← mem16								
TRANS	src-table	1 1 0 1 0 1 1 1		1	AL ← (BW + AL)								
XCH	reg,reg	1 0 0 0 0 1 1 W	1 1 reg reg	2	reg ↔ reg								
	mem,reg reg,mem	1 0 0 0 0 1 1 W	mod reg mem	2 to 4	(mem) ↔ reg								
	AW,reg16 reg16,AW	1 0 0 1 0 reg		1	AW ↔ reg16								
MOVSPA ^{Note}		0 0 0 0 1 1 1 1	0 0 1 0 0 1 0 1	2	New register bank SS and SP ← old register bank SS and SP								
MOVSPB ^{Note}	reg16	0 0 0 0 1 1 1 1	1 0 0 1 0 1 0 1	3	SS and SP of reg16-indicated new register bank ← old register bank SS and SP								
		1 1 1 1 1 reg											

Note These instructions are newly added to the μPD70108/70116.

Group	Mnemonic	Operand	Operation Code		Bytes	Operation	Flags					
			7 6 5 4 3 2 1 0	7 6 5 4 3 2 1 0			AC	CY	V	P	S	Z
Repeat prefix	REPC		0 1 1 0 0 1 0 1		1	Executes the primitive block transfer instruction in the continued byte while CW ≠ 0, and decrements CW by one. If any interruption is held at this time, it is processed. The program exits the loop when CY ≠ 1.						
	REPNC		0 1 1 0 0 1 0 0		1	Same as above. The program exits the loop when CY ≠ 0.						
	REP		1 1 1 1 0 0 1 1		1	Executes the primitive block transfer instruction in the continued byte while CW ≠ 0, and decrements CW by one. If any interruption is held at this time, it is processed. The program exits the loop when the primitive block transfer instruction is CMPBK or CMPM, and when Z ≠ 1.						
	REPE											
	REPZ											
Primitive block transfer	REPNE		1 1 1 1 0 0 1 0		1	Same as above. The program exits the loop when Z ≠ 0.						
	REPNZ											
Primitive block transfer	MOVBK	dst-block,	1 0 1 0 0 1 0 W		1	When W = 0, (IY) ← (IX) DIR = 0: IX ← IX + 1, IY ← IY + 1 DIR = 1: IX ← IX - 1, IY ← IY - 1						
		src-block				When W = 1, (IY + 1, IY) ← (IX + 1, IX) DIR = 0: IX ← IX + 2, IY ← IY + 2 DIR = 1: IX ← IX - 2, IY ← IY - 2						
	CMPBK	src-block,	1 0 1 0 0 1 1 W		1	When W = 0, (IX) - (IY) DIR = 0: IX ← IX + 1, IY ← IY + 1 DIR = 1: IX ← IX - 1, IY ← IY - 1	×	×	×	×	×	×
		dst-block				When W = 1, (IX + 1, IX) - (IY + 1, IY) DIR = 0: IX ← IX + 2, IY ← IY + 2 DIR = 1: IX ← IX - 2, IY ← IY - 2						
	CMPM	dst-block	1 0 1 0 1 1 1 W		1	When W = 0, AL - (IY) DIR = 0: IY ← IY + 1; DIR = 1: IY ← IY - 1	×	×	×	×	×	×
						When W = 1, AW - (IY + 1, IY) DIR = 0: IY ← IY + 2; DIR = 1: IY ← IY - 2						
LDM	src-block	1 0 1 0 1 1 0 W		1	When W = 0, AL ← (IX) DIR = 0: IX ← IX + 1; DIR = 1: IX ← IX - 1							
					When W = 1, AW ← (IX + 1, IX) DIR = 0: IX + 2; DIR = 1: IX ← IX - 2							
STM	dst-block	1 0 1 0 1 0 1 W		1	When W = 0, (IY) ← AL DIR = 0: IY ← IY + 1; DIR = 1: IY ← IY - 1							
					When W = 1, (IY + 1, IY) ← AW DIR = 0: IY ← IY + 2; DIR = 1: IY ← IY - 2

n: 1/2 of the number of BCD digits

Note The number of BCD digits is given in the CL register. The value can be set within 1 to 254.

3. ELECTRICAL SPECIFICATIONS

ABSOLUTE MAXIMUM RATINGS (T_A = 25°C)

Parameter	Symbol	Test Conditions	Rating	Unit
Supply Voltage	V _{DD}		- 0.5 to +7.0	V
Input Voltage	V _{TH}		- 0.5 to V _{DD} + 0.5	V
	V _I		- 0.5 to V _{DD} + 0.5	V
Output Voltage	V _O		- 0.5 to V _{DD} + 0.5	V
Output Current Low	I _{OL}	Each output pin	4.0	mA
		Total	50	mA
Output Current High	I _{OH}	Each output pin	-2.0	mA
		Total	-20	mA
Operating Ambient Temperature	T _A		-40 to +85	°C
Storage Temperature	T _{stg}		- 65 to +150	°C

- Cautions**
1. Do not make direct connections of the output (or input/output) pins of the IC product with each other, and also avoid direct connections to V_{DD}, V_{CC} or GND. However, the open drain pins or the open collector pins can be directly connected with each other. For the external circuit designed with the timing specifications so that any collision of the outputs from the pins subject to high-impedance state may be prevented, direct connection can be also made.
 2. Product quality may suffer if the absolute maximum ratings are exceeded for even a single parameter, or even momentarily. In other words, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions which ensure that the absolute maximum ratings are not exceeded. The normal operation and reliability of the product can be only assured with the specifications and the conditions indicated as the DC and AC characteristics.

★ OSCILLATOR CHARACTERISTICS

($T_A = -40$ to $+85^\circ\text{C}$, $V_{DD} = +5.0\text{ V} \pm 10\%$, $V_{SS} = 0\text{ V}$, $0\text{ V} \leq V_{TH} \leq V_{DD} + 0.1\text{ V}$)

Resonator	Recommended Circuit	Parameter	μPD70320		μPD70320-8		Unit
			MIN.	MAX.	MIN.	MAX.	
Ceramic or Crystal Resonator		Oscillation frequency (f_{xx})	4	10	4	16	MHz
External Clock	①	X1 input frequency (f_x)	4	10	4	16	MHz
	or ②	X1 rise/fall time (t_{xR} , t_{xF})	0	20	0	20	ns
		X1 input high-/low-level width (t_{wxH} , t_{wxL})	35	250	20	250	ns

- Cautions**
1. Mount the oscillation circuit as close to pins X1 and X2 as possible.
 2. Do not route other signal lines through the area within the dotted line.

RECOMMENDED OSCILLATOR CONSTANT

Ceramic resonator

Manufacturer	Part Number	Recommended Constants	
		C1 [pF]	C2 [pF]
Kyocera Corp.	KBR-10.0M ^{Note 1}	33	33
Murata Mfg. Co., Ltd.	CSA7.37MT040 ^{Note 2}	100	100
	CSA10.0MT ^{Note 1}	47	47
	CSA11.0MT ^{Note 2}		
	CSA16.0MX040 ^{Note 1}	30	30
TDK	FCR10.0M2S ^{Note 2}	30	30
	FCR16.0M2S ^{Note 2}	15	6
	FCR16.0M2G ^{Note 2}	22	10

- Notes**
1. The operating ambient temperature (T_A) is -10°C to +70°C when this resonator is used.
 2. The operating ambient temperature (T_A) is -20°C to +80°C when this resonator is used.

Crystal resonator

Manufacturer	Part Number	Recommended Constants	
		C1 [pF]	C2 [pF]
Kinseki Co., Ltd.	HC-49/U(KR-100)	22	22
	HC-49/U(KR-160)	22	22

Remark For more details on the characteristics of the resonators, please contact the manufacturer.

★ 6. RECOMMENDED SOLDERING CONDITIONS

The following conditions must be met when soldering this product.

For more details, refer to our document “SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL” (C10535E).

Please consult with our sales office when using other soldering process or under different soldering conditions.

Table 6-1. Surface Mount Type Soldering Conditions

- (1) μPD70320L : 84-pin plastic QFJ (1150 × 1150 mils)
 μPD70320L-8 : 84-pin plastic QFJ (1150 × 1150 mils)

Soldering Process	Soldering Conditions	Symbol
VPS	Package peak temperature: 215°C, Reflow time: 40 seconds or less, Number of reflow processes: 1 Exposure limit: 2 days ^{Note} (16 hours pre-baking is required at 125°C afterwards)	VP15-162-1
Partial heating method	Pin temperature: 300°C or below, Flow time: 3 seconds or less (per side of device)	—

Note Exposure limit before soldering after dry-pack package is opened. Storage conditions: 25°C and relative humidity at 65% or less.

- (2) μPD70320GJ-5BG : 94-pin plastic QFP (20 × 20 mm)
 μPD70320GJ-8-5BG : 94-pin plastic QFP (20 × 20 mm)

Soldering Process	Soldering Conditions	Symbol
Infrared ray reflow	Package peak temperature: 235°C, Reflow time: 30 seconds or less, Number of reflow processes: 3 or less Exposure limit: 7 days ^{Note} (36 hours pre-baking is required at 125°C afterwards)	IR35-367-3
VPS	Package peak temperature: 215°C, Reflow time: 40 seconds or less, Number of reflow processes: 3 or less Exposure limit: 7 days ^{Note} (36 hours pre-baking is required at 125°C afterwards)	VP15-367-3
Wave soldering	Package peak temperature: 260°C, Reflow time: 10 seconds or less, Number of reflow processes: 1 Pre-heating temperature: 120°C max. (package surface temperature) Exposure limit: 7 days ^{Note} (36 hours pre-baking is required at 125°C afterwards)	WS60-367-1
Partial heating method	Pin temperature: 300°C or below, Flow time: 3 seconds or less (per side of device)	—

Note Exposure limit before soldering after dry-pack package is opened. Storage conditions: 25°C and relative humidity at 65% or less.

Caution Use of more than one soldering process should be avoided (except for partial heating method).

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note: Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note: No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note: Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
